**The Board**
With two players use only the white spaces; with three players also use the light gray spaces; with four players use the whole board.

**Overview**
Each player has six tiles with color symbols on his rack. In clockwise order, players place one of their tiles onto the board, with the objective of establishing lines of matching symbols emerging from the placed tile. This allows the players to advance the respective color markers on their score boards. Players must attempt to advance all six of their color markers, not leaving any one of them behind. When the board is filled, each player’s lowest positioned marker defines his result. The player with the highest result wins.

**Play**
The youngest player begins, then play progresses clockwise. On your turn do the following:

**Play One Tile** Choose one tile from your rack and place it on any two connected empty spaces on the board. In the first round, each player must play adjacent to a different one of the six symbols already printed on the board.

**Score your Tile** Start with one of the two symbols on the tile you played. There are five straight lines emerging from this symbol, as indicated below.

In each line count the number of identical symbols (printed on the board or on other tiles), but stop counting as soon as you come to an empty space or a different symbol. (Do not count the symbol on the tile you just played!)

The total count makes your score in this symbol and you advance your respective color counter on your score board accordingly. Then score the second symbol on the tile you played in a similar manner.

---

**Game Materials**
1 game board
120 tiles
1 bag
4 racks
4 score boards
24 counters

These rules
**Bonus Play**

Your counters cannot advance beyond the final spaces (value 18) on the score board. For each of your counters that reaches the final space, call out “Ingenious” and you get an instant bonus play of one tile. Before refreshing, choose another tile from your rack, place it on the board and score it. Only after you have completed all your bonus plays, refresh your rack to six tiles.

**Game End**

The game ends when no further tiles can be played. Then determine the lowest color position of each player. This color is the player’s score. The player with the best score wins. In the case of a tie, use the next lowest color as a tiebreaker, and so on.

**Example**

![Player A](image1)

![Player B](image2)

![Player C](image3)

Player A wins with a score of 10. Player B is second with 9. Player C also has a score of 9 but his tiebreakers, 12 and 13, are not as good as B’s 12 and 14.

In the very rare case that one player succeeds in advancing all six counters to the end of his score board he wins instantly.

---

**4-Player Partnership Game**

As a game variant, players sitting opposite each other may form a partnership. All standard game rules apply, but each partnership uses a double-length score board by placing two regular score boards together. Both partners apply their individual scores to their joint score board. When no further tile can be placed on the board, the partnership with the better score wins.

No communication is allowed between the partners during play. Alternatively, players may agree to open communication.

**Bonus Play**

When a counter reaches the final space (value 18) on the first score board, the current scoring of this color symbol stops there, but the counter is immediately moved onto the start space (value 0) of the second score board. The player receives the usual free bonus play for “Ingenious” before refreshing. If a counter later reaches the final space on the second score board, another free bonus play is awarded for “Ingenious.”

**Example**

![Player A](image4)

When scoring 2 in green and 4 in yellow, both corresponding counters move to the start space (value 0) on the second score board. In the 4-player partnership game, both trigger a free bonus play. In the solitaire game, free bonus plays are not awarded.

---

**Solitaire Game for 1 Player**

All standard game rules apply, with the following exceptions: Use a double-length score board by placing two regular score boards together (as in the illustration below). When a counter reaches the final space (value 18) on the first score board, the current scoring of this color symbol stops there, but the counter is immediately moved onto the start space (value 0) of the second score board. Free bonus plays are not awarded in the solitaire game.

No rack is used. Draw one tile from the bag, place it on the board and score it. Then draw the next tile and proceed accordingly.

Only use the white spaces of the board. Try to reach a high score by the end of the game, when no further tile can be placed.
