

MARVEL

CHAMPIONS

THE CARD GAME

SUMMARY OF NOTABLE CHANGES

- Defined keywords, encounter icons, and status cards in game language.
- **Page 5:** Revised "Simultaneous Timing Priority" chart.
- **Page 8:** Added step to "Attack (Enemy Activation)" process.
- **Page 31:** Revised definition of "overkill."
- **Page 37:** Added definition of "resolve."
- **Page 42:** Revised definition of "surge."
- **Page 50:** Revised player deck customization rules.
- **Page 57–62:** Added and updated entries in "Appendix IV: FAQ."
- **Page 65–69:** Added entries to "Appendix V: Errata."

Notable changes since the previous version are marked in red.

OVERVIEW

This document is intended as the definitive source for rules information, but does not teach players how to play the game. Players should first read the Learn to Play book in its entirety and use this Rules Reference as needed while playing the game.

The majority of this book consists of a glossary, which provides an alphabetical listing of terms and situations that might be encountered during a game. This section should be the first destination for players with rules questions.

The three appendices at the end of the book contain deck customization rules, setup rules, and a card anatomy.

THE GOLDEN RULES

If the text of this Rules Reference directly contradicts the text of the Learn to Play book, the text of the Rules Reference takes precedence.

If the text of a card **or the rules of a scenario** directly contradicts the text of either the Rules Reference or the Learn to Play book, the text of the card **or the scenario rules** takes precedence.

THE GRIM RULE

If players are unable to find the answer to a rules or timing conflict in this Rules Reference, resolve the conflict in the manner that the players perceive as the worst possible resolution at that moment with regards to winning the scenario, and continue with the game.

COMPONENT LIMITATIONS

There is no limit to the number of threat tokens, damage tokens, acceleration tokens, status cards, or all-purpose counters that can be in the game at a given time.

If players run out of the provided tokens, counters, or status cards, other tokens, counters, or coins may be used.

ROUND OVERVIEW

The following is an overview of a game round, and the glossary entries that cover each part of the game round.

1. Player phase begins. **See:** Player Phase
2. Each player takes a turn. **See:** Player Turn
3. Player phase ends. **See:** End of Player Phase
4. Villain phase begins. **See:** Villain Phase
5. Place threat on main scheme. **See:** Main Scheme
6. Villain and minions activate. **See:** Activation, Attack (Enemy Activation), Scheme (Enemy Activation)
7. Deal encounter cards. **See:** Deal
8. Reveal and resolve encounter cards. **See:** Reveal
9. Pass the first player token. **See:** First Player
10. End the round. Proceed to step one of the next game round.

GLOSSARY

ABILITY

An ability is game text on a card that explains what the card does (or can do). Several examples can be seen in Appendix III of this Rules Reference.

- Card abilities only interact with cards that are in play, unless the ability specifically refers to an out-of-play area or element.
- Card abilities on hero, alter-ego, ally, upgrade, and support cards may only be used if the card is in play, unless the ability specifically refers to being used from an out-of-play state. Event cards implicitly interact with the game from an out-of-play area, as per the rules of the event card type.
- If an ability specifies one or more targets, that ability can only be initiated if it has at least one valid target. *For example, an ability that says "deal 5 damage to a minion" cannot be initiated if there are no minions in play.*
 - Examples of targets include but are not limited to: "the villain," "a minion," "an enemy," "a scheme," "a hero," "an ally," "a character," "a player," "you," "a card."
- When an ability has more than one sentence of text, read the entirety of the ability to check for alteration effects that may change the way the ability resolves. Then, resolve the ability one sentence at a time.
- An ability prefaced by a bold timing trigger followed by a colon is referred to as a triggered ability. An ability without a bold timing trigger is referred to as a constant ability. (See below.)
- Player card abilities cannot resolve during game setup, unless prefaced by a "**Setup**" timing trigger.
- The resolution of the following ability types is mandatory: constant abilities, "**Setup**" abilities, "**When Revealed**" abilities, "**When Defeated**" abilities, "**Forced Action**" abilities, "**Forced Interrupt**" abilities, "**Forced Response**" abilities, "**Boost**" abilities, and keywords.
 - If one of these ability types uses the word "may", the part of the ability following "may" is optional.
- The resolution of the following ability types is optional: "**Action**", "**Interrupt**", "**Response**", "**Resource**". The player who controls the card that has an optional ability determines whether or not to use that ability at the appropriate time. Any player can use such an ability on an encounter card, with the following exceptions:
 - Only the player who controls a player card with an attachment that uses the word "you" or "your" can trigger abilities or pay costs on that attachment.
 - Only the player with an obligation in their play area can trigger abilities or pay costs on that obligation.

Constant Abilities — A constant ability is any non-keyword ability whose text contains no bold timing trigger defining its ability type. A constant ability becomes active as soon as its card enters play and remains active while the card is in play.

- Some constant abilities continuously seek a specific condition (denoted by words such as “during”, “if”, or “while”). The effects of such abilities are active anytime the specific condition is met.
- If multiple instances of the same constant ability are in play, each instance affects the game independently.

Triggered Abilities — A triggered ability is indicated by a bold timing trigger followed by a colon and the rest of the ability text.

- Unless prefaced by the word “**Forced**”, all interrupt and response abilities are optional.
- “**Forced**” abilities, “**When Revealed**” abilities, “**When Defeated**” abilities, and “**When Completed**” abilities are triggered by the game at the ability’s appropriate timing point.
- If the bold timing trigger of an ability contains the word “Hero” or “Alter-Ego,” the ability can only be used if the player triggering the ability is in the specified form.
- If quotation marks are used around a timing trigger and colon, the quoted text is not itself a timing trigger, but is instead referring to other abilities with that trigger.

Simultaneous Timing Priority — Some abilities have timing priority over other abilities. In order, the timing priority of abilities with **the same triggering condition** is:

1. Constant abilities, delayed effects, and lasting effects.
2. Interrupts
 - a. Status card “**Forced Interrupt**” abilities.
 - b. “**Forced Interrupt**” abilities.
 - c. “**Interrupt**” abilities.
3. “**Boost**” and “**When Revealed**” abilities.
4. Responses
 - a. “**Forced Response**” abilities.
 - b. “**Response**” abilities.
5. Consequential damage.

See also: Action, Alteration Effect, “And”, Cancel, Delayed Effect, Forced, In Play and Out of Play, Initiating Abilities, Interrupt, Labeled Ability, Lasting Effects, Qualifiers, Replacement Effect, Resource Ability, Response, Simultaneous Resolution, Special, Target, “Then”, When Defeated Abilities, When Revealed Abilities, “Would”

ACCELERATION ICON (🚀)

An acceleration icon represents additional forces that are advancing the villain’s nefarious plans.

During step one of the villain phase, place X additional threat on the main scheme, where X is the number of acceleration icons in play.

- Each acceleration icon is equivalent to the following constant ability: “During the Place Threat step of the villain phase, place 1 additional threat on the main scheme.”
- An acceleration icon can be removed from play by defeating the encounter card it is printed on.
- Acceleration icons are not considered acceleration tokens, and vice versa.

See also: Icons, Main Scheme, Threat, Villain Phase

ACCELERATION TOKEN

Acceleration tokens are functionally equivalent to acceleration icons (but are not considered acceleration icons). They are placed next to the main scheme as a reminder to add X additional threat to the main scheme during step one of the villain phase, where X is the number of acceleration tokens in play.

Acceleration tokens enter play through one of two effects:

- If the encounter deck is empty, place one acceleration token next to the main scheme.
- Card effects may instruct the players to add an acceleration token to play.
 - Acceleration tokens placed on cards other than the main scheme still add threat to the main scheme during step one of the villain phase.

Acceleration tokens on the main scheme cannot be removed from play. Unlike other tokens, when a main scheme card leaves play, the acceleration token does not get discarded.

- Acceleration tokens placed on cards other than the main scheme are removed from play when the card they are placed on leaves play.
- Acceleration tokens are not considered acceleration icons, and vice versa.

See also: Component Limitations, Encounter Deck, Main Scheme, Villain

ACTION

"Action" is a type of triggered ability. Players are permitted to trigger action abilities during their turn, or by request during other players' turns.

- Players can only trigger action abilities on cards they control or on encounter cards.
- Players cannot trigger action abilities on obligations in other players' play areas.
- Each **"Forced Action"** ability must be resolved before the player phase can end.
- A forced action ability can be triggered at any time a non-forced action ability could be triggered.
- If such an ability has a cost that cannot be paid or requires one or more valid targets and has none, the phase can end without that ability being resolved.

See also: Ability, Player Turn, Triggered Ability

ACTIVATION

There are two types of enemy activations: an attack activation and a scheme activation. Whenever an enemy attacks or schemes, it is considered to have activated.

- During step two of the villain phase, the villain activates once per player, in player order. If the identity of the player resolving the activation is in hero form, the villain initiates an attack against that player's identity. If the identity of the player resolving the activation is in alter-ego form, the villain initiates a scheme.
- During step two of the villain phase, each minion engaged with a player activates against that player. If the identity of the engaged player is in hero form, the minion initiates an attack against that player's identity. If the identity of the engaged player is in alter-ego form, the minion initiates a scheme.
- Each time the villain activates, give the villain one boost card from the encounter deck for that activation.
- Some card abilities can also cause enemies to attack or scheme. These are also considered activations.
- If multiple enemies activate against you simultaneously, resolve the villain's activation first (if any) in the order of your choice, followed by minion activations in the order of your choice.
- If an activating minion leaves play, that minion's activation ends immediately and no further steps of that activation resolve.
- An effect that initiates an enemy activation is considered resolved after that activation has fully resolved.
- If an effect initiates an activation during the resolution of another activation, the newly initiated activation resolves after the current activation has finished resolving.

- If multiple activations are initiated this way, the first player decides the order in which they are resolved.
- All abilities triggered by the initial activation resolve before subsequent activations initiate.

See also: Boost, Attack (Enemy Activation), Scheme (Enemy Activation), Minion, Villain, Villain Phase

ACTIVE PLAYER

The player taking their turn during the player phase is the active player.

See also: Player, Player Turn

"ADDITIONAL"

See: Alteration Effect

"AFTER"

The word "after" refers to a game occurrence that just concluded. Many response abilities use the term "after" to specify the time at which they can be used.

See also: Ability, Response

ALL-PURPOSE COUNTER

All-purpose counters can be used to track a variety of different game states and statuses. They have no inherent rules.

Card abilities can create and define a number of different counter types, such as "arrow counters" or "web counters." If a counter is called for, an all-purpose counter is used to track its presence in the game.

- All-purpose counters are considered tokens for all game purposes.
- An ability that refers to an "all-purpose counter" can refer to any all-purpose counter, regardless of what other types that counter might have.
- When an all-purpose counter is moved from one card to another, it loses any previous type it had and gains the type defined on the new card it occupies. If the new card does not define a type, it is considered only an "all-purpose counter."

See also: Component Limitations, Uses (X "Type")

ALLIANCE

When a player declares their intention to play a card with the alliance keyword, any player(s) may help pay the costs for that card.

- The alliance keyword is equivalent to the following constant ability: "While paying costs for this card, any player may contribute to paying those costs."
- Only the player playing the card with the alliance keyword is considered to be resolving that card.

See also: Cost, Initiating Abilities, Keywords

ALLY

Ally is a player card type that represents an identity's friends, supporters, or companions.

- If an ally enters play, it remains in play until a card ability or game effect causes it to leave play. If an ally's remaining hit points are reduced to zero, it is defeated and discarded from play.
- During a player's turn, they may use any number of allies they control to attack or thwart. An ally must exhaust to attack or thwart.
- After an ally is used to attack or thwart, deal consequential damage to that ally equal to the number of consequential damage icons (★) beneath the ally's ATK or THW field. *(If an ally attempts to attack or thwart while stunned or confused, respectively, that ally will not take consequential damage.)*
- If a player is attacked, any player may exhaust an ally they control to defend against the attack. If an ally defends against an attack, all damage from the attack is dealt to the ally.
- Attacks, thwarts, defenses, action abilities, and triggered abilities that resolve from allies in play under a player's control are not considered to be performed by that player's identity.

See also: Ally Limit, Consequential Damage, Hit Points

ALLY LIMIT

Each player is permitted to control a maximum of three allies in play at any given time. This is referred to as the "ally limit."

A player may play or put into play allies beyond their ally limit. However, if a player ever controls a number of allies greater than their ally limit in play, they must immediately choose and discard from play ally cards they control until they have a number of allies in play equal to their ally limit. This occurs before abilities that resolve upon entering play.

See also: Ally, Discard, Enters Play

"ALREADY"

See: Alteration Effect

ALTERATION EFFECT

An alteration effect modifies the resolution of an ability that precedes it. Types of alteration effects include:

Additional — The word "additional" denotes a modifier to an ability or game state. The additional modifier is resolved simultaneously with any ability it is modifying and under the same conditions as that ability. *(For example, Repulsor Blast reads: "Hero Action (attack): Deal 1 damage to an enemy and discard the top 5 cards of your deck. For each printed ⚡ resource discarded this way, deal 2 additional damage to that enemy.")*

Already — The word "already" denotes the resolution of an alternate ability if a specific condition is met. The "already" effect checks if this condition is met before the preceding ability attempts to resolve. If so, the "already" effect resolves instead. *(For example, I'm Tough reads: "When Revealed: Give Rhino a tough status card. If Rhino already has a tough status card, this card gains surge.")*

Each Time — The phrase "each time" denotes a temporary interruption to a resolving ability. When a condition is met that is specified by the "each time" effect, the resolution of the preceding ability halts, the "each time" effect resolves in its entirety, then the preceding ability continues resolving. *(For example, "You Dare Oppose Me?" reads: "When Revealed: Discard the top 5 cards of the encounter deck. Each time a card belonging to the Kree Fanatic set is discarded this way, deal that card to yourself as a facedown encounter card.")*

This/That Activation/Attack/Thwart — Effects that refer to "this" or "that" activation, attack, or thwart denote a modifier to that activation, attack, or thwart. *(Examples: "That attack gains overkill." "Give the villain an additional boost card for this activation.")*

- If "this/that activation/attack/thwart" is part of a condition for an effect, it does not make that effect an alteration effect. *(For example, the following is not an alteration effect: "If this attack defeats that enemy, heal 2 damage from your hero.")*

See also: Ability, Activation, Modifiers, Replacement Effect, Target

ALTER-EGO, ALTER-EGO FORM

See: Form, Identity

AMPLIFY ICON (✚)

The amplify icon represents various forces that are empowering or bolstering the villain.

When a boost card is turned faceup **during an enemy activation**, add one additional boost icon to that card for each amplify icon in play.

- Each amplify icon is equivalent to the following constant ability: "Each boost card gains ✚."

See also: Activation, Boost, Enemy, Icons

"AND"

The word "and" indicates that two or more effects within an ability resolve simultaneously.

- Individual effects connected by "and" are not dependent on each other. Resolve as much of each effect as possible.
- Each effect connected by "and" can be canceled or prevented independently.

See also: Ability, Cancel, Prevent

ARROW ICON (→)

See: Cost Arrow Icon

ASPECT CARD

Cards in the “aspect” classification are any cards that belong to the Aggression, Justice, Leadership, and/or Protection aspects.

- When building a player deck, a player must choose one of the five aspects (*Aggression, Justice, Leadership, Protection, or Pool*) to use for customization. The remainder of their deck (*the portion not allocated to their identity-specific cards*) can then be customized with cards that belong to the chosen aspect.
- A card’s aspect is designated by the aspect’s name printed at the bottom of the card in its deckbuilding classification area.

See also: Basic Card, Classifications, Identity-Specific Card, Appendix I: Deck Customization

ASSAULT

When a character makes a basic thwart against a scheme with the assault keyword, that character uses its ATK instead of its THW.

- The assault keyword is equivalent to the following constant ability: “While a character is making a basic thwart against this scheme, that character uses its ATK instead of its THW.”
- If the thwarting character is an ally, it takes the consequential damage listed under its ATK instead of its THW after the thwart.
- Abilities that increase a character’s “basic power” can be used to increase that character’s ATK when that character thwarts a scheme with assault.

See also: Consequential Damage, Keywords

ATK

See: Attack (Player Ability Type), Basic Power

ATTACHMENT

Attachment is an encounter card type.

When an attachment enters play, it attaches to another card or game element.

- If an attachment attaches to a character, it may modify that character’s ATK, SCH, and/or THW values, as indicated by the values in the associated fields on the attachment card.
- If an attachment has a “SCH/THW” modifier, it modifies the attached character’s SCH if that character is a villain or minion, and modifies the attached character’s THW if that character is a hero or ally.

- If an attachment modifies a value the attached character does not have or for which that character has a dash (–) as a value, that modifier is ignored. (For example, if an attachment gives an alter-ego “+1 ATK,” that alter-ego does **not** get 1 ATK.)

- When an attachment attached to a player card uses the word “you” or “your,” it refers to the attached player card’s controller.
- Only the player who controls the card to which that attachment is attached can trigger abilities or pay costs on that attachment.

See also: Attach To, Dash (Value), Encounter Card, Enters Play, Game Element, Permanent

ATTACH TO

If a card uses the phrase “attach to”, it must be attached to (*placed beneath and slightly overlapped by*) the specified game element as it enters play.

- Once a card is attached, it remains in play until either the element it is attached to leaves play, in which case the attached card is discarded, or an ability or game effect causes the attached card to leave play.
- An attached card exhausts and readies independently of the game element it is attached to.
- The “attach to” phrase is checked for legality when the card would be attached to a game element, but it is not checked again after it is attached. If the initial “attach to” check does not pass, the card is not able to be attached, so it remains in its prior state or game area. If such a card cannot remain in its prior state or game area, discard it.
- The “attach to” phrase on a card is not resolved if another ability causes that card to attach to a specific game element.

See also: Attachment, Game Element, Upgrade

ATTACK (ENEMY ACTIVATION)

An attack is a type of enemy activation. When an enemy initiates an attack, it targets a specific player, then resolves that attack against that player.

- Enemy attacks are always initiated against both a player and a character.
- Normally the attacked character is the player’s hero, but abilities can instead cause an enemy to attack a player’s alter-ego or an ally that player controls. In all of these cases, the player is still considered attacked.
- If a character other than the attacked character defends the attack, that character becomes the new target of that attack.
- If a player other than the attacked player defends the attack with a character they control, that player becomes the new target of that attack.

- ▶ Abilities that trigger “When/After [enemy] attacks you” are resolved when/after a player is attacked, regardless of which character they control was attacked. (For example, Ultron I reads: **“Forced Response: After Ultron attacks you, choose to either place 1 threat on the main scheme or put the top card of your deck into play facedown, engaged with you as a drone minion.”** This effect resolves against the attacked player regardless of if that player used an ally to defend the attack.)

To resolve an enemy attack, follow these steps:

1. **Give boost card:** If a villain, or a minion with the villainous keyword, is attacking, give it one facedown boost card from the encounter deck. (If a minion without the villainous keyword is attacking, skip this step.)
2. **Declare defender:** If a player wishes to defend, that player exhausts a hero or ally as the defender.
 - ▶ The defending character becomes the target character for the attack.
 - ▶ If a player other than the target player defends, the defending player becomes the target player for the attack.
3. **Flip boost cards:** Flip and resolve each of the attacking enemy’s boost cards, one at a time and in the order in which they were dealt, by doing the following:
 - a. Flip the boost card faceup.
 - b. Resolve any **“Boost”** abilities, indicated by the star icon in the boost area. (All other abilities on the boost card are ignored.)
 - c. Increase the attacking enemy’s ATK value by one for each boost icon on the card.
 - d. Discard the boost card.
 - e. If the enemy has any boost cards remaining, repeat these steps with the next boost card.
4. **Calculate damage:** Determine how much damage will be dealt by the attack.
 - ▶ The base damage is equal to the attacking enemy’s ATK, including modifiers from abilities in play and boost icons resolved for the attack.
 - ▶ If a hero has been declared the defender of the attack, reduce the amount of damage dealt by that hero’s DEF value.
5. **Deal damage:** Deal the amount of damage calculated in the previous step, based on the following:
 - If a **hero was declared the defender** of the attack, the damage from the attack is dealt to that hero.
 - ▶ The defending hero is considered to have been attacked.
 - ▶ If a hero with a tough status makes a basic defense, the damage is first reduced by that hero’s DEF value. If the damage is reduced to 0, the hero keeps their tough status.

- If an **ally was declared the defender** of the attack, all damage from the attack is dealt to the ally. (If the ally is defeated by the attack, additional damage does not carry over to the identity.)
 - ▶ The defending ally is considered to have been attacked.
 - ▶ If the defending ally leaves play prior to damage from the attack being dealt, the attack is considered to have no character defending and the identity of that ally’s controller becomes the target of the attack.
 - If **no character was declared the defender** of the attack, the attack is considered undefended. All damage from the attack is dealt to the character targeted by the attack.
 - ▶ The targeted character is considered to have been attacked.
6. The attack finishes resolving and the following types of abilities trigger in order:
 - a. Forced abilities (such as the **retaliate** keyword) with the following triggers (in any order):
 - ▶ “after [character] attacks [and damages/defeats] [you/an ally]...”
 - ▶ “after [character] is attacked...”
 - ▶ “after [character] defends [and takes no damage]...”
 - ▶ “after [character] [takes/deals] damage...”
 - b. Non-forced abilities with the triggers listed above.

These rules also apply to enemy attacks:

- Interrupts that trigger “when [enemy name] attacks” have the same timing as interrupts that trigger “when [the villain/an enemy] initiates an attack.”
- If an enemy attack ends before damage is dealt, abilities that trigger **after an attack** or after a character defends an attack resolve **as normal**.
- Abilities that trigger when an enemy “attacks and damages” or “attacks and defeats” a character trigger only when that character is damaged/defeated by damage from the attack itself, and not by an ability that resolves during the attack.
 - ▶ For example, Sonic Converter reads: **“Forced Response: After Klaw attacks and damages a character, stun that character.”** If Klaw is given a boost ability that says **“Boost: Deal 1 damage to each hero,”** that boost ability does not trigger the ability on the Sonic Converter.

See also: Activation, Ally, Attacks Against Allies, Boost, Damage, Defend, Enemy, Identity, Minion, Modifiers, Retaliate X, Target, Villain, Villainous

ATTACK (PLAYER ABILITY TYPE)

Some game effects and card abilities reference an attack. There are a few different ways an attack can occur:

- A hero or ally can use their basic attack power to attack an enemy. A character must exhaust to use this power. This deals damage equal to the character's ATK value to the enemy.
 - A character can only initiate a basic attack if there is an enemy that can be attacked by that character or if that character is stunned.
 - An ability that allows a hero or ally to "make a basic attack without exhausting" can allow an exhausted character to make a basic attack.
- If a triggered ability is labeled as an attack—such as "**Hero Action (attack)**"—resolving that ability is considered to attack the specified target. Unless specified by the ability's text, a hero does not exhaust when using such an ability.
 - An ability labeled as an attack is considered a single attack, even if that attack deals multiple instances of damage.
 - When an attack ability has its damage increased by another ability, each instance of damage in that attack ability that does not use the word "additional" is increased by the specified amount.
- If an ability says "Make the following X attacks in order," followed by two or more instances of damage, each of those instances is considered a separate attack.
 - An ability that increases the damage of an attack only increases the damage of one of that ability's attacks, though such an ability can be triggered separately for each attack.
- Hero and ally attacks can target any enemy, unless a card ability (such as *guard*) is preventing that enemy from being attacked.
- When an attack targets multiple enemies, the attacking character is considered to have attacked each of those enemies.
 - Each attacked enemy with the *retaliate X* keyword that is still in play after the attack resolves deals its retaliate damage to the attacking character.
- The order of resolution for abilities triggered by the resolution of an attack is as follows:
 7. Forced abilities (such as the *retaliate keyword*) with the following triggers (in any order):
 - "after [character] attacks [and damages/defeats] [an enemy/a minion]..."
 - "after [character] is attacked..."
 8. Non-forced abilities with the triggers listed above.
 9. Consequential damage (for allies).

See also: Ally, Basic Power, Damage, Defend, Enemy, Identity, Labeled Ability, Minion, Modifiers, Retaliate X, Target, Villain

ATTACKS AGAINST ALLIES

Some effects cause a villain or minion to attack an ally directly. When this occurs, any undefended damage from that attack is placed on the ally that was attacked.

- The player who controls the ally is considered the attacked player.
 - Abilities that resolve while/when/after the attacking enemy "attacks you" resolve against the attacked player.
 - Any boost abilities that refer to "you" refer to the player who controls the attacked ally.
- Players may defend these attacks as normal by declaring a hero or an ally as the defender.
- If the attack has overkill and defeats an ally (whether that ally was the attacked ally or a defending ally), any excess damage from that attack is dealt to the identity of the player who controlled the defeated ally.

See also: Ally, Attack (Enemy Activation), Defend, Target

BASE VALUE

A defined value before modifiers are applied. In most cases, it is also the printed value.

See also: Modifiers, Printed

BASIC CARD

Cards in the "Basic" classification are cards that are not associated with a specific identity or aspect.

- When building a deck, a player may customize the remainder of their deck (the portion not allocated to their identity-specific cards) using basic cards.
- A card is designated as basic if it has the word "Basic" printed at the bottom of the card in its deckbuilding classification area.
- Basic cards are not aspect cards.

See also: Aspect Card, Classifications, Identity-Specific Card, Appendix I: Deck Customization

BASIC POWER

A basic power is a statistic that allows a character to perform a certain game function.

- There are five different basic powers:
 - Attack power (ATK) can be used by a character to perform a basic attack and deal damage to another character. Generally, heroes, allies, villains, and minions have attack power.

- ▶ Thwart power (*THW*) can be used by a character to perform a basic thwart and remove threat from a scheme. Generally, heroes and allies have thwart power.
- ▶ Defense power (*DEF*) can be used by a character to perform a basic defense and prevent damage from an attack. Generally, only heroes have defense power.
- ▶ Recovery power (*REC*) can be used by a character to perform a basic recovery and heal damage from themself. Generally, only alter-egos have recovery power.
- ▶ Scheme power (*SCH*) can be used by a character to perform a basic scheme and place threat on the main scheme. Generally, villains and minions have scheme power.

See also: Ally, Attack (Enemy Activation), Attack (Player Ability Type), Defend, Identity, Minion, Modifiers, Recover, Recovery, Scheme (Enemy Activation), Thwart

BOOST, BOOST ICON (Y)

Each time the villain attacks or schemes, the villain is given one facedown card from the encounter deck, as a boost card. Minions with the villainous keyword are also given a boost card when they activate.

BOOST ICONS

During the activation (*and after any defenders are declared if the villain is attacking*), each boost card on the enemy is turned face up one at a time. Add the number of boost icons on each card to the enemy's ATK value (*if it is attacking*) or SCH value (*if it is scheming*) for that activation. Boost icons are located at the bottom-right of the card.

If the boost field has a star icon, it indicates that the card has a "**Boost**" ability. Refer to the card's text box and resolve the "**Boost**" ability when the card is turned face up. The "**Boost**" ability is located beneath the divider line in the text box.

- A star icon is not itself considered a boost icon, and does not contribute to the villain's ATK or SCH value.
- Only the ability text beneath the divider line is active on a card that is resolving as a boost card.
- Damage dealt by a boost ability is not considered to be damage dealt by the activation during which the boost ability resolved.
- If additional boost cards are resolved for an activation, the boost icons are cumulative, and all "**Boost**" abilities on those cards resolve.
- After applying a boost card to an activation, discard it.
- If an enemy is dealt a boost card outside of its own activation, that boost card remains facedown on that enemy until that enemy activates.
- ▶ If that enemy is a villain or a minion with the villainous keyword, it still gets dealt another boost card at the start of its activation as normal.

See also: Attack (Enemy Activation), Scheme (Enemy Activation), Star Icon, Villainous

CAMPAIGN MODE

See: Modes of Play

CAMPAIGN-SPECIFIC CARD

Cards in the "campaign-specific" classification are cards that belong to a campaign's set of accompanying cards.

- Campaign-specific cards can only be used during a campaign from the same product (*determined by that product's set icon*).
- A campaign's rules determine how players utilize campaign-specific cards within that campaign.
- A campaign-specific card is designated by the word "Campaign" printed at the bottom of the card in its encounter set name area.

See also: Classifications, Modes of Play

CANCEL

Some card abilities can cancel card or game effects.

- Cancel abilities interrupt the initiation of effects and prevent them from resolving.
- Anytime the effects of an ability are canceled, the ability (*apart from its effects*) is still regarded as initiated, and any costs are still paid. Only the effects are prevented from initiating, and do not resolve.
- If the effects of an event card are canceled, the card is still considered played, and it is discarded.
- If the effects of a treachery card are canceled, the card is still regarded as revealed, and it is still placed in the encounter discard pile.
- Cancel effects are considered a subtype of replacement effect, with the canceled effect being replaced with no effect.
 - ▶ Abilities dependent on the canceled effect cannot trigger as the canceled effect is not considered to have occurred.

See also: Ability, Replacement Effect

"CANNOT"

The word "cannot" is absolute and cannot be countermanded by other abilities or effects.

- If two abilities conflict, the ability with "cannot" takes precedence.
- If two rules conflict, the rule with "cannot" takes precedence.
- An ability can override a rule with "cannot" per the Golden Rules.

See also: The Golden Rules, Target

CARD ABILITY

See: Ability

CARD TYPES

A card's card type denotes various rules and game functions associated with that card.

- Ally, event, identity, player side scheme, resource, support, and upgrade cards are types of player cards.
- Attachment, environment, main scheme, minion, obligation, side scheme, treachery, and villain cards are types of encounter cards.
- If an ability causes a card to change its card type, it loses all other card types it might possess and functions as would any card of the new card type.
 - Any cards attached to a card that changes type remain attached, but only those abilities that refer to the new card type remain active. (For example, if an ally's card type is changed to minion, an upgrade attached that says "attached ally gets +1 ATK" would no longer provide that ally-turned-minion with bonus ATK, but an attachment that says "attached character cannot attack" would still apply because minions are also characters.)
 - An ally that has been changed to a minion engages its controller and does not take consequential damage after it attacks or schemes.
 - When a player changes a minion to an ally, that player takes control of that ally.

See also: Ally, Attachment, Encounter Card, Environment, Event, Identity, Main Scheme, Minion, Obligation, Player Card, Player Side Scheme, Resource Card, Side Scheme, Support, Treachery, Upgrade, Villain, Appendix III: Card Anatomy

CHARACTER

Identities (*heroes and alter-egos*), allies, villains, and minions are all characters.

See also: Ally, Identity, Minion, Villain

CHOOSE (GAME ELEMENT)

The phrase "choose a [game element]" (such as an ally, a minion, or a scheme) indicates that a player must select a game element that meets the specific requirements of an ability.

- The player resolving the ability that uses the word "choose" is the player who makes the choice specified by the card.
- If a player card ability requires the choosing of one or more targets, and there are no valid targets for any part of the ability, the ability cannot be initiated.
- If multiple targets are required to be chosen by the same player, simultaneously choose as many as are available, to a maximum of the specified number.

➤ The same target cannot be chosen multiple times this way.

- An effect that can choose "any number" of targets does not successfully resolve if zero of those targets are chosen.

See also: Ability, Game Element, Player, Target

CHOOSE (OPTION)

Some abilities instruct a player to choose between multiple options. For example, "Choose to either take 1 damage or discard 1 card from your hand."

- When an encounter card requires a player to choose an option, they cannot choose an option that requires one or more targets if there are no valid targets for that option.
- When a player card requires a player to choose an option, they cannot choose an option that cannot be at least partially resolved. This includes options that:
 - Have a cost the player cannot pay.
 - Require one or more targets and there are no valid targets.
- When a card requires a player to choose multiple options from a list, that player cannot choose the same option multiple times.

See also: Ability, Player, Target

CLASSIFICATIONS

A card's classification is the group that a card belongs to as determined by its specific attributes.

- Cards in the "identity-specific" classification are cards that belong to an identity's set of accompanying cards. (**See:** Identity-Specific Card)
- Cards in the "aspect" classification are cards that belong to the Aggression, Justice, Leadership, Protection, and/or 'Pool aspects. (**See:** Aspect Card)
- Cards in the "Basic" classification are not associated with a specific identity or aspect. (**See:** Basic Card)
- Cards in the "scenario-specific" classification are cards that belong to a scenario's set of accompanying cards. (**See:** Scenario-Specific Card)
- Cards in the "modular encounter set" or "modular set" classification are cards that belong to a modular set of encounter cards. (**See:** Modular Encounter Set)
- Cards in the "campaign-specific" classification are cards that can only be used during a campaign from the same product. (**See:** Campaign-Specific Card)
- Cards in the "Standard" classification are cards that are added to most scenarios. (**See:** Modes of Play, Standard Set)
- Cards in the "Expert" classification are cards that are added to scenarios when playing expert mode. (**See:** Expert Set, Modes of Play)

CONFUSE, CONFUSED

Confuse is a status that cancels a character's next scheme or thwart.

- A confused status card resolves like the triggered ability: **"Forced Interrupt: When this character would scheme or thwart, remove each confused status card from it instead."**
- If an ability "confuses" a character, give that character a confused status card.
- A character is confused if it has a confused status card.
 - A character with the steady keyword is confused only if it has two confused status cards.
- If a character has an ability stating that it "cannot be confused," confused status cards cannot be placed on that character.
- If a confused identity or ally attempts to thwart or use a thwart ability, discard the confused card instead. Costs associated with the thwart attempt, including exhausting the character, must still be paid.
 - A confused character can attempt to thwart or use a thwart ability even if it has no valid target for a thwart.
- If a confused villain or minion would scheme, discard the confused status card instead.
- As the thwart action or scheme activation was replaced by the removal of the confused status card, that character is not considered to have thwarted or schemed.

See also: Ally, Cancel, Identity, Minion, Status Cards, Target, Villain

CONSEQUENTIAL DAMAGE (☆)

After an ally attacks, it takes consequential damage equal to the number of consequential damage icons (☆) beneath its ATK field.

After an ally thwarts, it takes consequential damage equal to the number of consequential damage icons (☆) beneath its THW field.

- Consequential damage is dealt to an ally after resolving abilities that are triggered by the ally attacking or thwarting.
- If the target of an ally's basic power leaves play before that ally deals damage equal to its ATK or removes threat equal to its THW, the ally does not take consequential damage (*but still exhausts*).
 - That ally is not considered to have attacked or thwarted for the purpose of other abilities.

- For example, Iron Fist's ability reads: **"Interrupt: When Iron Fist attacks an enemy, remove 1 mystic counter from him → stun that enemy and deal 1 damage to it."** If this effect defeats the enemy Iron Fist was attacking, the basic attack aborts as soon as the target leaves play, so Iron Fist does not take consequential damage from it.

See also: Ally, Attack (Player Ability Type), Basic Power, Damage, Icons, Thwart

CONSTANT ABILITY

See: Ability

CONTROL

See: Ownership and Control

COPY

A copy of a card is defined by title. A second copy of a card is any other card that shares the same title and subtitle (*if any*), regardless of card's type, text, artwork, or any other differing characteristics between the cards.

See also: Card Types, Subtitle

COST

A card's resource cost is the numerical value that must be paid to play the card. Some abilities have a cost described in the ability text that must be paid to use the ability.

- A cost arrow icon (→) in ability text distinguishes a cost from an effect, in a "pay cost → resolve effect" format.
 - Text indicating the timing of an interrupt or response trigger that precedes a cost arrow is not considered part of the cost.
- A resource cost with the per-player icon (♠) is multiplied by the number of players who **started** the scenario.
 - If a cost with the per-player icon is reduced, the total cost of the card is reduced, not the value that is multiplied by the number of players.
- To pay a resource cost, a player spends resources that they generate by discarding cards from their hand or by using **"Resource"** card abilities.
 - Resources generated to pay for an ability on a card are considered to have been paid for that card.
- While paying a cost, a player is permitted to generate resources beyond the specified cost.
 - Resources generated beyond the specified cost are considered to have been overpaid for that cost and were not paid for that cost.
 - Any resources that are generated beyond the specified cost are lost after paying that cost.
- If multiple costs for a single card or ability require payment, those costs must be paid simultaneously.

- ▶ A player generating resources for those costs chooses how to divide those resources between those costs. (For example, a player paying costs for an event with a resource cost of 1 and an ability that reads **"Hero Action: Spend X ↗ resources →..."** can spend a resource card that generates ↗ ↗ resources and use one of those icons to pay for the card's resource cost and the other to pay for the cost before the arrow.)

- An ability's cost cannot be paid if that ability's effect requires one or more targets and there is not at least one valid target.
- While a player is paying a cost, that player must pay costs with cards and/or game elements they control.
 - ▶ If a cost uses the word "choose," the player can choose targets they do not control.
 - ▶ If a cost targets a "friendly" card, the player can target cards they do not control.
- If a cost requires a game element that is not in play, the player paying the cost may only use game elements that are in their own out-of-play areas.
- A cost requiring "any number" or "up to" some number of game elements requires a minimum of one such game element.
- Some card abilities may reference an "additional cost." A player must pay all additional costs simultaneously with the cost that is being added to, even if multiple cards or abilities are adding separate additional costs. A player cannot pay the original cost or any of the additional costs individually; if they cannot pay for all of the costs at once, then they do not pay any of the costs and the effect associated with the costs does not occur.
- If dealing damage is a cost, that cost is considered paid even if some or all of that damage is prevented.
- If taking damage is a cost, that cost is not considered paid unless all of that damage was taken. (If any of the damage is prevented, then the cost has not been paid.)

See also: Ability, Cost Arrow Icon, Game Element, Initiating Abilities, Keywords

COST ARROW ICON (→)

A cost arrow icon (→) in ability text distinguishes a cost from an effect, in a "pay cost → resolve effect" format. Non-bolded text before the cost arrow icon must be paid and/or resolved in full before the text after the cost arrow icon can be resolved.

- Responses to the text preceding the cost arrow icon resolve before the text following the icon resolves.

See also: Cost, Icons

COUNTER

See: All-Purpose Counter

CRISIS ICON (⚡)

While at least one crisis icon is in play, threat cannot be removed from the main scheme by player cards.

- Each crisis icon is equivalent to the following constant ability: "Player cards cannot remove threat from the main scheme."
- Abilities on encounter cards are not affected by the crisis icon.

See also: Main Scheme, Threat

DAMAGE

Damage reduces a character's hit points. If a character has zero or fewer remaining hit points, it is defeated.

- Damage on an identity or villain is tracked by a hit point dial. If such a character takes damaged, reduce its dial by the amount of damage that it took.
- Damage on an ally or minion is tracked by damage tokens. If such a character takes damage, place the specified value of damage tokens on the character.
- When damage is dealt to a character, that character takes damage.
 - ▶ When the amount of damage an effect deals is modified, the amount of damage the character takes is similarly modified.
 - ▶ When the amount of damage a character takes is modified (such as by damage being prevented), the amount of damage dealt is **not** modified.
 - ▶ The order of resolution for effects surrounding the dealing and taking of damage are as follows:
 1. Abilities that trigger "when [character] would deal/be dealt any amount of damage..."
 2. Tough status cards.
 3. Abilities that trigger "when [character] would take any amount of damage..."
 4. Abilities that trigger "when [character] takes any amount of damage..."
 5. Placing of damage on the character.
 6. Abilities that trigger "when [character] would be defeated..."
 7. Abilities that trigger "when [character] is defeated..." (including **"When Defeated" abilities**).
 8. Discarding of a defeated character.
 9. Abilities that trigger "after [character] deals/is dealt/takes any amount of damage..." or "after [character] defeats/is defeated..."

See also: Component Limitations, Defeat, Hit Points, Indirect Damage, Move, Prevent, Tough

DASH (VALUE)

A value presented as a dash (–) indicates that value cannot be used.

- If a card has a dash (–) as its cost value, that card cannot be played and can only enter play through other means.
- If a character's power (ATK, DEF, REC, SCH, and THW) has a dash (–) as the value, the character cannot exhaust to use that power.
- If a game step or card ability references a value of dash (–), that value is treated as an unmodifiable 0. (For example, if an ability targets "the ally with the lowest SCH," an ally with a dash for its SCH is considered to have the same SCH as an ally with a SCH of 0.)

See also: Basic Power, Non-Numerical Variable

DEAL, DEAL AN ENCOUNTER CARD

During step three of the villain phase, each player is dealt one facedown encounter card.

If a card ability instructs a player to be dealt an encounter card, the player takes the top card of the encounter deck and places it facedown in front of them. This card is not revealed at this time. This card is added to the queue of cards that player resolves during the villain phase.

- If a player is dealt an encounter card during step three or four of the villain phase, the extra encounter card is added to the queue of cards that are being dealt and revealed in those same steps.

See also: Ability, Encounter Card, Encounter Deck, Player, Villain Phase

DECK

There are four main types of decks that appear in a game: the player deck, the encounter deck, the villain deck, and the main scheme deck. Certain identities or scenarios may add other decks to the game.

- The order of cards within a deck cannot be altered unless a player is instructed to do so by a game step, game function, or card ability.

See also: Encounter Deck, Main Scheme, Player Deck, Villain

DECK CUSTOMIZATION

See: Appendix I: Deck Customization

DEF

See: Basic Power, Defend

DEFEAT

If a character has zero or fewer remaining hit points, or if a side scheme has no threat on it, it is defeated.

- If an ally, minion, or side scheme is defeated, it is discarded.
- If an identity or stage of the villain is defeated, it is removed from the game.

See also: Ally, Hit Points, Minion, Player, Player Elimination, Removed from the Game, Side Scheme, Villain, Villain Defeat

DEFEND, DEFENSE

During an enemy attack, a player may defend against that attack using cards they control.

- Only one player at a time can defend against an enemy attack. While a player is defending, other players cannot defend against that same attack.
- A hero can use their basic defense power to defend against an enemy attack. A hero must exhaust to use this power. The amount of damage dealt by the attack is reduced by the hero's DEF value, and any remaining damage is dealt to that hero. While a hero is defending against an attack, other friendly characters cannot defend against that attack.
 - When a card ability says to "declare [a hero] the defender" of an attack, that hero is considered to be making a basic defense.
 - A card ability that allows a hero to be declared as a defender without exhausting can be used on an exhausted hero.
- An ally can exhaust to defend against an enemy attack. Damage from the attack is dealt to that ally. While an ally is defending against an attack, other friendly characters cannot defend against that attack.
 - When an ally defends an attack, that ally becomes the target character for that attack, and its controller becomes the target player for that attack.
 - When a card ability says to "declare [an ally] the defender" of an attack, that ally becomes the defender of the attack.
 - A card ability that allows an ally to be declared as a defender without exhausting can be used on an exhausted ally.
- When a player initiates a triggered ability labeled as a defense—such as "**Hero Interrupt (defense)**"—during an enemy attack, that player's identity becomes the defender and is considered to have defended the attack if there is not already a defender.
 - The player's identity is considered to be the defender as soon as the defense-labeled ability begins resolving.
 - Abilities that trigger "when your hero defends against an attack" can be triggered when resolving a defense-labeled ability.

- **Resolving** a defense-labeled ability is not a basic defense and does not cause a hero to reduce the amount of damage dealt by that hero's DEF. **That hero can still be declared the defender of the attack during the "Declare Defender" step or by another card ability.**
- Unless specified by the ability's text, a hero does not exhaust when using a defense-labeled ability.
- The defending player may resolve any number of defense abilities during an enemy attack (*as long as the triggering conditions of those abilities are met*).
- Once a player resolves a defense-labeled ability during an enemy attack, other players cannot resolve defense-labeled abilities for that same attack.
- Defense-labeled abilities can be played during an attack by a player whose ally is defending that attack. In that case, the player's identity does **not** become the defender.
- A player can trigger abilities labeled as a defense outside of an attack if the ability's triggering condition is met. When triggered this way, the player's identity is not considered to have defended an attack.
- If a player defends against an enemy attack that targets a different player (*either by defending with a character they control or by resolving a defense ability*), the defending player becomes the new target of that attack.
- Any triggered ability that refers to "you" refers to the player who was the target of the attack when that ability resolved. (*For example, the "you" in an ability that triggers "when [enemy] attacks you" refers to the player against whom the attack initiated, while the "you" in an ability that triggers "after [enemy] attacks you" refers to the player whose character defended the attack.*)
- Any constant or boost abilities that refer to "you" refer to the defending player.
- If no character is used to defend against an enemy attack, that attack is considered undefended. Additionally, if a defending ally is defeated before damage from the attack is dealt (*such as through a "Boost" ability*), the attack is considered undefended.
- Abilities that trigger after a character defends an attack resolve after that attack ends.
 - If an effect causes a defended attack to end before fully resolving, the attack is still considered to have been defended.
 - If an ability triggers after a character uses a basic power, that ability triggers after an attack in which a character made a basic defense resolves.

See also: Ability, Ally, Attack (Enemy Activation), Damage, "Friendly", Identity, Labeled Ability, Player

DELAYED EFFECT

Some abilities contain delayed effects. Such abilities specify a future timing point, or indicate a future condition that may arise, and dictate an effect that is to happen at that time.

- Delayed effects resolve automatically and immediately after their specified timing point or future condition occurs or becomes true, and before responses to that point or condition may be used.
- Delayed effects have the same timing priority as constant effects.
- When a delayed effect resolves, it is not treated as a new triggered ability, even if the delayed effect was originally created by a triggered ability.

See also: Ability

DISCARD

Discarding is the act of attempting to move a card from a non-discard-pile play area to a discard pile.

- If a player card is discarded, it is placed faceup on top of the owning player's discard pile.
- If an encounter card is discarded, it is placed faceup on top of the encounter discard pile.
- If multiple cards are discarded from a player's hand or from play by a singular effect, place those cards in the appropriate discard pile in any order.
- If multiple cards are discarded from a deck by a singular effect, place those cards in the appropriate discard pile one at a time (*without changing the order*).
 - These discards are considered simultaneous.
 - Responses to the discarding of any of those cards are resolved after all discards are made.
- If a player looks at a number of cards from the top of a deck and discards one or more of those cards, those cards are considered to have been discarded from the top of that deck.

See also: Discard Pile, Encounter Card, In Play and Out of Play, Ownership and Control, Player Card, Shuffle

DISCARD PILE

A discard pile is an out-of-play area that contains cards that have been discarded throughout the game.

- Each player has their own discard pile, and the encounter deck has its own discard pile.
- Each discard pile is open information, and may be looked at by any player at any time.
- The order of cards in a discard pile may not be changed unless a player is instructed to do so by a card ability.
- Any ability that would shuffle a discard pile of zero cards back into a deck does not shuffle the deck.

See also: Discard, In Play and Out of Play, Ownership and Control, Player, Shuffle

DOUBLE-SIDED CARD

A card is double-sided if neither of its sides has a card back (*player, villain, or encounter*).

- When a double-sided card would enter an out-of-play area other than the victory display or set-aside area, it is removed from the game.
- If a double-sided card has “**Standard Mode Only**” and “**Expert Mode Only**” sides, it is put into play with the “**Expert Mode Only**” side faceup if the players are playing expert mode. Otherwise, the card is put into play with the “**Standard Mode Only**” side faceup.

See also: Encounter Card, In Play and Out of Play, Player Card, Victory X, Villain

DRAW, DRAWING CARDS

If a player is instructed to draw one or more cards, those cards are drawn from the top of their deck one at a time.

- Drawn cards are added to a player’s hand.
- Each player’s hand size is checked at the end of the player phase. If a player has more cards in their hand than their hand size value at this time, they must choose and discard cards from hand until they are at their hand size.

See also: Discard, In Play and Out of Play, Ownership and Control, Player, Player Deck, Player Phase

“EACH PLAYER”

When each player is instructed to resolve an effect, each player resolves that effect one at a time.

- If the effect does not specify what order the players resolve the effect in, the first player decides the order.
- If a player cannot fully resolve that effect, they resolve it as fully as possible. *For example, if each player is instructed to discard a certain number of cards from the encounter deck and the deck empties while one player is discarding from it, that player stops discarding as soon as the deck is emptied. After the deck is reset (and an acceleration token is placed next to the main scheme deck), the remaining players resume discarding from it.*

See also: Choose (Game Element), Player

“EACH TIME”

See: Alteration Effect

EFFECT

See: Ability, Cost

EMPTY DECK

See: Encounter Deck, Player Deck

ENCOUNTER CARD

There are eight encounter card types: attachment cards, environment cards, minion cards, main scheme cards, obligation cards, side scheme cards, treachery cards, and villain cards.

- Encounter cards belong to various classifications, such as scenario-specific encounter cards or modular set encounter cards.
- Most encounter cards have an orange card back.

See also: Attachment, Classifications, Environment, Main Scheme, Minion, Obligation, Side Scheme, Treachery, Villain, Appendix I: Deck Customization

ENCOUNTER DECK

The encounter deck contains the encounter cards (*attachments, environments, minions, side schemes, and treacheries*) that players can face during a scenario.

- The order of cards within the encounter deck cannot be changed unless a player is instructed to do so by a game step, game function, or card ability.

If the encounter deck is empty, the encounter discard pile is immediately shuffled to create a new encounter deck. When this occurs, place an acceleration token next to the main scheme deck.

- If a card ability discards a specified number of cards from the encounter deck or until a card with specific criteria is discarded, discard cards from the encounter deck until the discard condition is met or the encounter deck is empty. If the encounter deck is emptied this way, that card ability is considered to be fulfilled. Do not continue the discard effect with the newly shuffled encounter deck.
- *If the encounter deck empties during the resolution of any other type of game effect (for example, the dealing of encounter cards), that effect finishes resolving after the encounter deck has been reset.*
- If there are no cards in both the encounter deck and the encounter discard pile simultaneously (such as all cards from the encounter deck being in play), an infinite loop occurs with an infinite number of acceleration tokens being placed next to the main scheme deck. If this happens, the players lose.

See also: Acceleration Token, Attachment, Choose (Game Element), Discard, Discard Pile, Environment, Minion, Side Scheme, Treachery

ENCOUNTER DISCARD PILE

See: Discard Pile

ENCOUNTER SET

An encounter set is a grouping of encounter cards.

- There are four types of encounter sets: scenario-specific encounter sets, modular encounter sets, the Standard set, and the Expert set.
- Encounter sets with the same name but different set icons are considered distinct sets.

See also: Classifications, Expert Set, Modular Encounter Set, Scenario-Specific Card, Standard Set

END OF PLAYER PHASE

To end the player phase, perform the following steps:

1. In player order, each player may discard any number of cards from their hand, and must discard down to their hand size if they have more cards than their hand size.
2. Each player simultaneously draws up to their hand size.
3. Each player simultaneously readies all of their cards. Ready each exhausted encounter card.
4. Any effects that last “until the end of the [player] phase” end.
5. Resolve any “when/after the [player] phase ends” effects.

See also: Discard, Draw, Hand Size, Lasting Effects, Player, Player Phase, Player Turn, Ready

ENEMY

An enemy is a minion or villain.

When used as a descriptor, “enemy” refers to game elements that belong to the scenario: “enemy cards”, “enemy abilities” etc.

See also: Game Element, Minion, Villain

ENEMY ACTIVATION

See: Activation, Attack (Enemy Activation), Scheme (Enemy Activation)

ENEMY ATTACKS

See: Activation, Attack (Enemy Activation)

ENEMY SCHEMES

See: Activation, Scheme (Enemy Activation)

ENERGY RESOURCE (⚡)

An energy resource (⚡) is one of the four types of resources.

- Energy resources can be spent to pay the resource cost of cards and abilities.
- Some card abilities specifically require energy resources to be spent in order to resolve their effects.

See also: Ability, Cost, Icons, Mental Resource, Physical Resource, Resource, Wild Resource

ENGAGE

When a minion enters play in a player’s play area, it engages that player.

Unless otherwise specified by the minion or by the effect that put the minion into play, the minion engages the player who is resolving the current encounter card.

- An engaged minion remains engaged with the same player until it is defeated, removed from play, or a card ability causes it to engage another player.
- If a card ability instructs a player to engage a minion, that minion is also considered to have engaged that player.
- While a minion is engaged with a player, card abilities cannot cause the minion to engage with the same player again (*as the two are already engaged*).

See also: Ability, Defeat, Minion, Player, Player’s Play Area

ENTERS PLAY

The phrase “enters play” refers to any time when a card transitions from an out-of-play area into play. Playing a card, putting a card into play by using a card ability, or revealing a card from the encounter deck are all different means by which a card may enter play.

See also: In Play and Out of Play, Leaves Play, Play, Reveal

ENVIRONMENT

Environment is an encounter card type that creates an overarching rule or set of rules for the scenario.

An environment card enters play in the villain’s play area, and is active so long as it remains in play.

- If an environment enters play, it remains in play until a card ability or game effect causes it to leave play.

See also: Card Types, Encounter Card, Enters Play, Leaves Play, Villain

EVENT

Event is a player card type that is generally played for an instantaneous effect.

Each time a player plays an event card, that player places it faceup on the table in front of them (*the event is not in play*), pays its costs, resolves its effects (*unless those effects are canceled*), and then places the card in its owner’s discard pile after those effects resolve (*or are canceled*).

- If an event has more than one triggered ability on it, the player playing it chooses one of those abilities to trigger when playing that event.
- If the effects of an event are canceled, the card is still considered to have been played, and its costs remain paid. Only the effects are canceled.
- An event card cannot be played if it requires one or more targets and does not have at least one valid target.

- Event cards are considered to be an extension of an identity. Attacks, thwarts, defenses, action abilities, and triggered abilities that resolve from a player playing an event are also considered to be performed by that player's identity.
- If an effect modifies the amount of damage an event deals or the amount of threat an event removes, and that event deals multiple instances of damage or removes multiple instances of threat, each of those instances is modified.
 - If an effect modifies the amount of damage "an attack" deals (rather than "an event"), and an event initiates multiple attacks, only the first of those attacks has its damage modified.

See also: Card Types, Discard, Identity, Labeled Ability, Player, Player Card, Ownership and Control

EXCESS DAMAGE

Excess damage is any amount of damage that is dealt to a character beyond that character's remaining hit points.

See also: Ally, Damage, Hit Points, Identity, Minion, Remaining Hit Points, Villain

EXHAUSTED

If a card is exhausted, it is rotated 90 degrees.

- An exhausted card cannot be exhausted again until it is ready. Cards are typically readied by a game step or card ability.
- A card ability on an exhausted card is active and can still interact with the game state. However, if an exhausted card must exhaust to pay the cost of using its ability, that ability cannot be used until the card is ready.

See also: Ready

EXPERT MODE

See: Modes of Play

EXPERT SET

The expert set is an encounter set that is added to scenarios during expert mode.

- The expert set is not a modular encounter set and cannot be selected (*by the players or randomly*) when a scenario requires players to choose a modular encounter set to include in that scenario.
- Cards in the "Expert" classification are any cards that have the word "Expert" printed by the bottom of the card in its encounter set name area.

See also: Classifications, Modes of Play, Modular Encounter Set, Appendix I: Deck Customization

FIND

When instructed to find a card, a player searches each game area where that card could be found (*play area, set-aside area, player deck, discard pile, encounter deck, etc.*).

- Players should not unnecessarily search game areas if they know where the card they are looking for can be found.
- All game areas are subject to search when resolving a "find" instruction, with the following exceptions:
 - Facedown encounter cards in any in-play game area (*whether that card is in play itself*). (For example, any encounter cards dealt to a player or given to a character as a boost card.)
 - The victory display.
 - Cards that have been removed from the game.
- If a player is instructed to "find and reveal" a minion that is already in play, that player engages that minion and resolves any keywords and/or triggered abilities that resolve as a result of that minion being revealed (*such as that minion's "When Revealed" ability*).
 - That minion retains all **attached cards** and tokens on it.
 - That minion is **not** considered to be entering play.
 - That minion is considered to engage that player unless it was already engaged with that player.

See also: Search, Removed from the Game, Victory Display

FIRST PLAYER

A first player is determined by the players at the beginning of the game.

The first player token is used to indicate which player is the first player. At the end of the round (*during step five of the villain phase*) the first player token passes to the next clockwise player, who becomes first player for the next round.

If the first player is eliminated, the first player token immediately passes clockwise to the next player.

The players as a group are encouraged to work together, but the first player decides the following:

- If an encounter card targets a specific player or card, and there are multiple eligible targets, the first player selects among the eligible options.
- If an encounter card requires a card ability to be resolved, a game function to be performed, or a choice to be made but does not specify which player should act, the first player does so.
- If two or more effects would resolve simultaneously, the first player decides the order in which to resolve them.

The first player has timing priority in the following situations:

- The first player has the first opportunity to use an interrupt at each appropriate game moment. Interrupt opportunities then proceed among the remaining players in player order.
- The first player has the first opportunity to use a response at each appropriate game moment. Response opportunities then proceed among the remaining players in player order.

See also: In Player Order, Player, Player Elimination, Player Phase

FLIP

When instructed to flip a card, turn that card upside down so that the face that was faceup is now facedown.

- A foldable, “three-sided” card is considered to have flipped any time the faceup side of the card changes.
- When a card flips, if the new faceup side of that card has:
 - The same card type as the previous face, the card retains all attached cards, tucked cards, status cards, and tokens.
 - A different card type from the previous face, all **attached cards**, **tucked cards**, status cards, and tokens are discarded from the card.

See also: Double-Sided Card

“FOR EACH”

“For each” indicates an effect is repeated based on the number of a countable game element.

- If an effect with “for each” requires a target, that effect applies to a single target unless the “for each” clause includes a “choose” instruction.
 - *For example, an effect that reads “For each treachery looked at this way, remove 1 threat from a scheme” removes threat from a single scheme. Alternatively, an effect that reads “For each upgrade you control, choose an enemy and deal 2 damage to it” allows you to choose a different enemy for each upgrade you control.*
- If a “for each” effect without a “choose” instruction deals damage or removes threat, it is considered a single instance of damage dealt or threat removed, respectively.
- If a “for each” effect has a “choose” instruction, each iteration of that choice is considered a separate instance of that effect, even if the same target is chosen multiple times.
 - The game state updates after each instance (*for example, if a minion or side scheme is defeated*).
 - Responses can be triggered after each instance.

➤ *For example, if a player is engaged with a guard minion and uses an effect that says “for each resource you spent this way, choose an enemy and deal 2 damage to it,” that player can defeat the guard minion with one instance of 2 damage, making the villain a valid target for further instances. That player can trigger a response ability like “After you deal damage to an enemy” after each instance.*

- If another ability modifies a “for each” effect, that modifier is applied to each instance of the “for each” effect. (*For example, Flurry of Blades is an event that has the effect: “For each Psi-Katana, choose an enemy and deal 2 damage to it.” If modified by an effect that says “that event deals 1 additional damage,” Flurry of Blades deals 3 damage to each chosen enemy.*)

See also: Ability, Target

FORCED

Forced is a bold trigger word. If the word “**Forced**” precedes a triggered ability, the ability’s initiation is mandatory.

- “**Forced Interrupt**” and “**Forced Response**” abilities must be resolved when their triggering conditions are met.
- “**Forced Action**” abilities can be triggered at any time during the player phase when a non-forced action ability could be triggered, but must be resolved before the player phase can end.
- If a forced ability requires one or more targets to resolve and it has no valid targets, it does not initiate.
 - Any costs that would have been paid to initiate the ability are not paid.
- For any given triggering condition, forced interrupts take priority and initiate before non-forced interrupts, and forced responses take priority and initiate before non-forced responses.
- If two or more forced abilities would initiate at the same moment, the first player determines the order in which the abilities initiate, regardless of who controls the cards bearing those abilities.
- Each forced ability must resolve as completely as possible before the next forced ability being triggered by the same triggering condition may initiate.

See also: Ability, Action, Target

FORM, CHANGE FORM

A player can be in either hero or alter-ego form at a given time. This is indicated by the player's identity card.

- Once each round, during their turn, each player is permitted to change form by flipping their identity card.
- When a player changes form, only the form changes. The character retains their sustained damage, status cards, lasting effects, **attached cards**, **tucked cards**, tokens, and current state (*ready or exhausted*).
- If a card ability causes a player to change forms, it does not count against the one voluntary form change the player is permitted during their turn that round.
- While a player is in hero form, card abilities that interact with their alter-ego do not interact with their identity.
- While a player is in alter-ego form, card abilities that interact with their hero do not interact with their identity.
- Cards with the "[type] form" keyword grant an identity unique forms.
 - These forms are in addition to the identity's alter-ego and hero forms, and they come with their own conditions for changing into them.
 - When an identity changes their additional form, it does not count against the once-per-turn limit on flipping from hero to alter-ego (or vice versa), but it does count as changing form for the purpose of triggering card effects.
- Cards with the text "[type] form only" can only be played or put into play by a player whose identity is in the specified form.

See also: Flip, Identity, Keywords

"FRIENDLY"

Friendly is a blanket term that refers to cards the players control.

"GAINS"

If a card gains a characteristic (*such as a trait, keyword, or ability text*), the card functions as if it possesses the gained characteristic. Gained characteristics are not considered to be printed on the card.

See also: Keywords, Printed, Traits

GAME ELEMENT

A game element is a component or person involved in playing a game of **Marvel Champions**. All of the following are game elements:

- Cards
- Decks
- Discard Piles
- Hands (of cards)
- Hit Point Dials
- Players
- Tokens

See also: Card Types, Deck, Discard Pile, Player, Target

GENERATE

See: Resource

"GETS"

See: Hit Points, Modifiers

GUARD

While a minion with the guard keyword is engaged with a player, that player cannot use cards they control to attack a villain without this keyword.

- The guard keyword is equivalent to the following constant ability: "The engaged player cannot attack any villain."

See also: Attack (Player Ability Type), Engage, Keywords, Minion, Reminder Text, Villain

HAND SIZE

Each player checks their hand size at the end of the player phase, either discarding down to or drawing up to the number of cards indicated by their hand size value.

- When drawing up to their hand size, a player draws cards one at a time, checking after each card is drawn whether they are at their hand size.

See also: End of Player Phase, Modifiers

HAZARD ICON (🚨)

During the Deal Encounter Cards step of the villain phase, for each hazard icon on cards in play, deal one player one additional card (*not one card per player*). Additional cards are dealt in player order (*first additional card to the first player, the second to the second player, etc.*).

- Each hazard icon is equivalent to the following constant ability: "During the Deal Encounter Cards step of the villain phase, deal 1 additional encounter card. Additional cards from hazard icons are dealt in player order."

See also: Deal, In Player Order, Villain Phase

HEAL

If an ability heals a character, damage the character has sustained can be removed from the character.

- A heal effect can only bring a character to its maximum hit points, unless the effect explicitly states it can bring the character above its maximum.
- Effects that move damage off of a character are considered to heal that character.

See also: Ally, Hit Points, Identity, Minion, Villain

HERO, HERO FORM

See: Form, Identity

HEROIC MODE

See: Modes of Play

HINDER X

A card with the hinder X keyword enters play with X threat on it. (X is the value next to the hinder keyword.)

- The hinder X keyword is equivalent to the following constant ability: "This card enters play with X threat on it."
- This threat is in addition to any threat it normally enters play with, such as a side scheme's starting threat.

See also: Enters Play, Keywords, Reminder Text, Reveal, Threat

HIT POINTS

Each character (*identity, ally, minion, and villain*) has a hit point value. Hit points represent the durability of that character.

When damage is dealt to a character, it reduces the character's remaining hit points (*the amount of damage that character can take before reaching zero hit points*).

- The phrase "starting hit points" refers to an identity's printed hit point value.
- An identity's or villain's hit point dial represents their remaining hit points. If an identity or villain is damaged, apply the damage by reducing that character's hit point dial by the specified amount.
 - If a player's hit point dial is reduced to zero, that player is defeated and eliminated from the game.
 - If a villain's hit point dial is reduced to zero, that stage of the villain is defeated.
 - When an ability that says an identity or villain "gets +X hit points" goes into effect, increase that character's hit point dial by X. If that ability later ceases to be in effect, reduce that character's hit point dial by X.

- If an ally or minion is damaged, track the damage by placing damage tokens on that character. Damage tokens on an ally or minion reduce that character's remaining hit points by the total value of the tokens. An ally or minion with zero or fewer remaining hit points is defeated and placed in the appropriate discard pile.
 - If an ability that says an ally or minion "gets +X hit points" ceases to be in effect and causes that ally or minion to have damage on it equal to or greater than its hit points, that ally or minion is defeated.

Some characters may have an infinite number of hit points. A character with infinite hit points cannot be defeated by taking damage, as the amount of damage that character takes will never cause its remaining hit points to reach zero. However, damage may still be dealt to a character with infinite hit points through attacks and card abilities.

See also: Ally, Damage, Defeat, Heal, Identity, Maximum Hit Points, Minion, Modifiers, Player Elimination, Remaining Hit Points, Sustained Damage, Villain, Villain Defeat

ICONS

Icons are graphical elements that represent various functions within the game.

- **Energy Icon** (⚡): An energy icon is a resource icon that generates one energy resource when spent. (**See:** Energy Resource)
- **Mental Icon** (🧠): A mental icon is a resource icon that generates one mental resource when spent. (**See:** Mental Resource)
- **Physical Icon** (💪): A physical icon is a resource icon that generates one physical resource when spent. (**See:** Physical Resource)
- **Wild Icon** (🌿): A wild icon is a resource icon that can generate one energy, mental, physical, or wild resource when spent. (**See:** Wild Resource)
- **Acceleration Icon** (🚀): An acceleration icon places additional threat on the main scheme during the villain phase. (**See:** Acceleration Icon)
- **Amplify Icon** (🔍): An amplify icon increases the number of boost icons on boost cards during enemy activations by one. (**See:** Amplify Icon)
- **Crisis Icon** (⚠️): A crisis icon prevents players from removing threat from the main scheme. (**See:** Crisis Icon)
- **Hazard Icon** (🔪): A hazard icon increases the number of encounter cards that are dealt to players during the villain phase. Each hazard icon deals one player one additional card (*not one card per player*). (**See:** Hazard Icon)
- **Boost Icon** (⬆️): A boost icon increases the activating enemy's ATK or SCH value during enemy activations. (**See:** Boost)

- **Star Icon (★):** A star icon is used in conjunction with a card's stat or boost field to indicate that there is a mandatory ability in the text box that corresponds to that field. (See: Star Icon)
- **Consequential Damage Icon (☆):** A consequential damage icon is used in conjunction with an ally's ATK field or THW field. After an ally attacks or thwarts, it takes one consequential damage for each consequential damage icon in that field. (See: Consequential Damage)
- **Cost Arrow (→):** A cost arrow separates an ability's cost from its effects. (See: Cost Arrow Icon)
- **Per Player Icon (♠):** A per player icon next to a value multiplies that value by the number of players who **started** the scenario. (See: Per Player Icon)
- **Unique Icon (†):** A unique icon in a card's title indicates the card is unique. (See: Unique Icon)

IDENTITY

Identity is a player card type that represents which character a player is playing in the game.

A player's identity card is a double-sided card that represents their hero on one side and their alter-ego on the other. The side that is face up indicates the form (*hero or alter-ego*) that player is currently in.

- Each player begins the game in alter-ego form.
- If a card refers to a hero or alter-ego by title, it refers only to the identity with that title, and not to the other side of the card.
- Identity cards cannot be discarded from play.
- The faceup side of an identity card is considered to be in play. The facedown side of an identity card is considered to be out of play.

See also: Form, In Play and Out of Play, Player, Player Card

IDENTITY-SPECIFIC CARD

Cards in the "identity-specific" classification (*also sometimes called "hero-specific"*) are cards that belong to an identity's set of accompanying cards.

- A player's deck must include each identity-specific card associated with their chosen identity card. The exact quantity of each card in that identity-specific set must be included in the deck.
- Identity-specific cards (*along with obligation cards and nemesis encounter set cards*) may only be used alongside an identity if those cards share a set icon with that identity.
- An identity-specific card is designated by the identity icon printed in the bottom right corner of the card.
 - Identity cards are identity-specific cards.

See also: Aspect Card, Basic Card, Classifications, Identity, Nemesis Encounter Set, Appendix I: Deck Customization

IGNORE

An ability that ignores some ability, icon, or cost treats that ability, icon, or cost as not being in effect or present while that ability is resolving.

- When a card is played "ignoring its resource cost," no resources are paid for that card. For the purpose of card effects, that card is considered to have been played with zero resources paid for its cost.

See also: Ability, Cost, Icons, Requirement (Resources)

IN PLAY AND OUT OF PLAY

A card is considered to either be in play or out of play depending on its state within the game.

If a card is in play, its text is active and it can affect the game.

- For player cards, the faceup side of a player's identity card is in play. The faceup ally cards, support cards, and upgrade cards that have entered play (*played, put into play, etc.*) are in play.
- For encounter cards, the faceup side of the top card of the villain deck and the faceup side of the top card of the main scheme deck are in play. The faceup attachment cards, environment cards, minion cards, obligation cards, and side scheme cards that have entered play (*revealed, put into play, etc.*) are in play.
- A card enters play when it moves from an out-of-play area to a play area.
- Card abilities only interact with, and can only target, cards that are in play (*unless the ability text specifically refers to an out-of-play area*).
- Card abilities on all card types, except event cards and treachery cards, can only be initiated or affect the game while they are in play unless they specifically refer to being used from an out-of-play area.
- If a card is double-sided (*having game text on each side of the card*), the faceup side of the card is in play.

If a card is out of play, its text is inactive and cannot affect the game.

- Event cards and treachery cards implicitly resolve from an out-of-play area, by virtue of the rules pertaining to those card types.
- Cards in a player's hand, deck, and discard pile are out of play.
- Cards in the encounter deck, encounter discard pile, unrevealed cards in the villain deck, unrevealed cards in the main scheme deck, and facedown encounter cards dealt to a player are out of play.
- Facedown cards attached to in-play cards are out of play.
- Any cards that have been removed from the game or that have been set aside are out of play.

- A card leaves play when it moves from a play area to an out-of-play area.
- If a card is double-sided (*having game text on each side of the card*), the facedown side is out of play.

See also: Ability, Enters Play, Leaves Play, Play, Play Restrictions and Permissions, Set Aside, Target, Victory Display

IN PLAYER ORDER

If players are instructed to perform a sequence “in player order,” the first player performs their part of the sequence first, followed by the other players in clockwise order.

- If a sequence performed in player order does not conclude after each player has performed their part of the sequence once, the sequence of opportunities continues in a clockwise manner until it is complete.
- The phrase “next player” always refers to the next (clockwise) player in player order.

See also: Find, Player, Player Phase, Player Turn

INCITE X

When a card with the incite X keyword is revealed, place X threat on the main scheme. (*X is the value next to the incite keyword.*)

- The incite X keyword is equivalent to the following triggered ability: **“When Revealed: Place X threat on the main scheme.”**

See also: Keywords, Main Scheme, Reminder Text, Reveal, Threat

INDIRECT DAMAGE

Some card abilities may deal “indirect damage.”

- Indirect damage dealt to a player can be divided as that player chooses among characters under their control.
- Indirect damage dealt to a group of players (or among players) can be divided as the group chooses among friendly characters in play.
- All indirect damage from a single source is first assigned and then resolved simultaneously.
 - While assigning indirect damage, a character cannot be assigned more indirect damage than would cause it to be defeated. This is assessed without accounting for interactions with other abilities.
 - A character with a tough status card can be assigned indirect damage up to its remaining hit points, and all damage assigned to it is prevented by its tough status card.
- Characters that cannot take damage cannot be assigned indirect damage.

- If indirect damage dealt to a player cannot be assigned to any character that player controls, that damage is ignored.

- If an enemy’s attack deals indirect damage, the indirect damage is dealt during step four of the enemy activation (*after player’s have the opportunity to defend against the attack*).

- Only the defending character, or the attacked player’s identity if the attack was undefended, is considered to have been attacked, even if other characters were assigned some or all of the indirect damage.

- For example, if you take 5 indirect damage, but you control an ally with 4 hit points remaining, you may assign 4 of that indirect damage to the ally, then assign the remaining 1 indirect damage to your identity.

See also: Ally, Attack (Enemy Activation), Damage, Defeat, Player

INFINITE HIT POINTS

See: Hit Points

INITIATING ABILITIES

When a player wishes to play a card or initiate a triggered ability, that player first declares their intent. Then, the player checks the following conditions in order:

1. If playing a card, the player places that card faceup on the table in front of them. (*This card is not in play.*)
2. Check play restrictions: can the card be played, or the ability initiated, at this time?
 - If the card or ability specifies one or more targets, check that it has at least one valid target. If the card or ability does not have at least one valid target, it cannot be played or initiated.
 - If the card or ability has a form requirement (*for example, “Hero form only” or “Hero Action”*), the form of the player playing that card or initiating that ability is checked now.
3. Determine the cost (or costs) to play the card or initiate the ability and the player’s ability to pay them, taking modifiers into account.
 - If a card has a resource cost of X, the player playing that card chooses the value of X during this step.

If both conditions are met, follow these steps in order:

4. Apply any modifiers to the cost(s).
5. Pay the cost(s). If this step is reached and the cost(s) cannot be paid, abort this process without paying any costs.
6. The card commences being played, or the effects of the ability attempt to initiate.

7. The card is played or the ability (if not canceled in the previous step) resolves. The card enters play or, if it is an event card, its effects resolve and it is then placed in its owner's discard pile.
- If any of the above steps would make the triggering condition of an interrupt ability true, that ability may be initiated just before that triggering condition becomes true.
- If any of the above steps would make the triggering condition of a response ability true, that ability may be initiated immediately after that triggering condition becomes true.
- If the ability being initiated is on a card that is in play, the sequence does not stop from completing if that card leaves play during this sequence unless the card leaving play prevents a required cost from being paid.

See also: Ability, Cost, Play Restrictions and Permissions, Target

"INSTEAD"

See: Replacement Effect

INTERRUPT

An interrupt ability is a type of triggered ability, indicated by the bold "**Interrupt**" timing trigger. Interrupt abilities may be **resolved** anytime the specified triggering condition occurs, as described in the interrupt's ability text. The interrupt ability interrupts the resolution of the specified triggering condition, and resolves immediately before that triggering condition resolves.

- Players can only trigger interrupt abilities on cards they control or on encounter cards.
 - Players cannot trigger interrupt abilities on obligations in other players' play areas.
- Multiple interrupts may be triggered by the same triggering condition, but each interrupt can only be triggered once per occurrence of the triggering condition.
 - Multiple copies of a card with an interrupt can each be triggered by the same triggering condition.
- An interrupt ability is **resolved** when its triggering condition initiates, but before that triggering condition resolves.
 - Interrupts that use the word "would" resolve before its triggering condition initiates, when that condition becomes imminent.
- If an interrupt changes (via a replacement effect) or cancels an imminent triggering condition, further interrupts to the original triggering condition cannot be triggered.
- Once all players decide they do not wish to resolve any (further) interrupts to a triggering condition, (further) interrupts to that instance of that triggering condition cannot be used.

See also: Cancel, Replacement Effect, Triggered Ability, "Would"

KEYWORDS

A keyword is an attribute that conveys specific rules to its card.

- If a card gains multiple instances of a keyword, any additional instances have no effect unless that keyword is followed by a number (e.g. *Hinder X*, *Retaliate X*), in which case the numbers for each instance are added together.

The following keywords are used in the game:

- **Alliance:** When a player declares their intention to play an alliance card, any player(s) may help pay the costs for that card. (**See:** Alliance)
- **Assault:** When a character makes a basic thwart against a scheme with the assault keyword, that character uses its ATK instead of its THW. (**See:** Assault)
- **Form:** A card with the form keyword grants an identity a unique form. (**See:** Form)
- **Guard:** While a minion with guard is engaged with a player, that player cannot attack the villain. (**See:** Guard)
- **Hinder X:** A card with the hinder X keyword enters play with X threat on it. (**See:** Hinder X)
- **Incite X:** When a player reveals a card with incite X, that player places X threat on the main scheme. (**See:** Incite X)
- **Linked (Card Title):** Cards with the linked keyword are set aside until the card named in parentheses brings the linked card into the game. (**See:** Linked (Card Title))
- **Overkill:** Excess damage from attacks with overkill are dealt to the identity or villain. (**See:** Overkill)
- **Patrol:** While a minion with patrol is engaged with a player, that player cannot thwart the main scheme. (**See:** Patrol)
- **Peril:** While a player is resolving a card with peril, other players cannot help that player. (**See:** Peril)
- **Permanent:** Cards with permanent cannot leave play. (**See:** Permanent)
- **Piercing:** Attacks with piercing discard tough status cards from the attacked character before damage is dealt. (**See:** Piercing)
- **Quickstrike:** After this enemy engages a player, it immediately attacks that player if they are in hero form. (**See:** Quickstrike)
- **Ranged:** Attacks with ranged ignore retaliate. (**See:** Ranged)
- **Requirement (Resources):** A card with the requirement keyword cannot be played unless each resource of the specified type is spent while paying for that card's cost. (**See:** Requirement (Resources))
- **Restricted:** A player cannot control more than two restricted cards at a given time. (**See:** Restricted)

- **Retaliate X**: After a character with retaliate X is attacked, deal X damage to the attacker. (**See**: Retaliate X)
- **Setup**: Cards with setup start the game in play. (**See**: Setup)
- **Stalwart**: Characters with Stalwart cannot be stunned or confused. (**See**: Stalwart)
- **Steady**: A character with the steady keyword is not stunned or confused unless it has two stunned or confused status cards, respectively. (**See**: Steady)
- **Surge**: After a player reveals a card with surge, that player reveals an additional encounter card. (**See**: Surge)
- **Team-Up**: Cards with team-up cannot be played unless both characters listed by the keyword are in play. (**See**: Team-Up)
- **Teamwork (TRAIT)**: After a minion with teamwork enters play and engages a player, if there is at least one other minion that shares the specified trait in play, the minion that just entered play activates against the player it is engaged with. (**See**: Teamwork (TRAIT))
- **Temporary**: A card with temporary must be discarded from play at the end of the round. (**See**: Temporary)
- **Toughness**: When a character with toughness enters play, place a tough status card on it. (**See**: Tough/Toughness)
- **Uses (X "type")**: When a card with uses enters play, place X all-purpose counters from the token pool on that card. After the last all-purpose counter is removed from a card with uses (and the effect resolves), discard that card. (**See**: Uses (X "type"))
- **Victory X**: When a card with victory X is defeated, add it to the victory display. (**See**: Victory X)
- **Villainous**: When a minion with villainous activates, give it a boost card. (**See**: Villainous)

LABELED ABILITY

A labeled ability is a triggered ability with a parenthetical following its bold trigger text that designates that ability as an attack, defense, and/or thwart.

- The identity of the player using the labeled ability is considered to be performing the labeled effect when the labeled ability begins resolving (after costs have been paid).
- When a player resolves an ability labeled "(attack)," that ability is considered to be an attack made by that player's identity.
- When a player resolves an ability labeled "(defense)," that ability is considered to be a defense made by that player's identity.
 - When such an ability is initiated during an attack, the player's identity becomes the defender of that attack.

- When a player resolves an ability labeled "(thwart)," that ability is considered to be a thwart made by that player's identity.
- When a player resolves an ability with multiple labels, that ability is considered to be each of the labeled ability types, all made by that player's identity.
- If a player triggers a labeled ability while their identity has one or more status cards that cancel any of the labeled ability types, the entire ability (except for its costs) is canceled.
 - That identity is not considered to have attacked, defended, or thwarted.
 - Each status card on the player's identity that cancels any of the labeled ability's types is removed when that ability is canceled. *For example, an ability labeled "(attack/thwart)" would remove both a confused status and a stunned status from the identity of the player who triggered the ability.*

See also: Attack (Player Ability Type), Defend, Thwart

LASTING EFFECTS

Some card abilities create effects or conditions that affect the game for a specified duration (such as "until the end of the phase" or "until the end of this attack"). Such effects are known as lasting effects.

- A lasting effect persists beyond the resolution of the ability that created it, for the duration specified by the effect. The effect continues to affect the game for the specified duration whether or not the card that created the lasting effect is in play.
- For the specified duration of a lasting effect, it is treated as if it was a constant ability and has the same timing priority as a constant ability.
- Lasting effects update whenever the game state updates. (For example, a lasting effect of "until the end of the phase, your hero gets +1 ATK for each minion in play" changes the affected hero's ATK any time a minion enters or leaves play during that phase.)
- If a card enters play (or changes status to meet the criteria of a specified set of affected cards) after the creation of a lasting effect, it is still affected by that lasting effect.
- A lasting effect expires as soon as the timing point specified by its duration is reached. This means that an "until the end of the round" lasting effect expires just before an "at the end of the round" ability or delayed effect may initiate.
- A lasting effect that expires at the end of a specified time period can only be initiated during that time period.

See also: Ability, Enters Play

LEADER

The leader card type follows the same rules as the villain card type for all purposes.

See also: Villain

LEAVES PLAY

The phrase “leaves play” refers to any time when a card transitions from an in-play area to an out-of-play area. Defeating a character, discarding a card from play, placing a card in the victory display, or removing a card from the game are all different means by which a card can leave play.

- When a card leaves play, there is no memory of its previous state and it is considered to be a new copy of the card.
- When a **non-villain** card leaves play:
 - Discard each card attached to or tucked under that card.
 - Discard each boost card given to that card.
 - Return each token and status card on that card to the supply.

See also: Defeat, Discard, Discard Pile, Enters Play, In Play and Out of Play, Removed from the Game, Victory Display

LIMIT

“Limit X per [period]” is a limit that appears on some player cards. These limits are card-specific. Each copy of an ability with such a limit may be used X times per the specified period, per instance of that ability.

- If an effect with a limit is canceled, the card is still considered to have been played or the ability initiated, and it counts toward the limit.

See also: Player Card

LINKED (CARD TITLE)

Cards with the linked keyword cannot be included in any deck. Instead, they are set aside at the start of the game if any deck includes the card that brings the linked cards into play (indicated in the parentheses following the keyword).

- The **linked (card title)** keyword is equivalent to the following constant ability: “Set this card aside during setup. This card does not count toward your deck size.”
- Linked cards do not count toward the minimum or maximum deck size.
- The number of linked cards set aside during setup is equal to the number of those cards included in the product from which the linked card came.
 - If multiple decks contain the same card named on one or more linked cards, set aside the appropriate number of cards for each deck that contains the named card.
- When a player takes control of a card with the linked keyword, that player becomes the owner of that card.

See also: Keywords, Ownership and Control, Set Aside

LOOK, LOOKED-AT

If an ability instructs a player to look at cards that are otherwise hidden from the players, only the player who is resolving the ability can look at those cards. However, that player is permitted to convey any amount of information related to those cards to other players.

- While a player is looking at cards in a deck, those cards are still considered part of that deck.
 - After looking at cards in a deck, those cards are returned to that deck in the same order.

“LOSES”

If a card loses a characteristic (*such as a trait, keyword, or ability text*), the card functions as if it does not possess the gained characteristic.

- Lost characteristics are still considered to be printed on the card.
- A lost characteristic cannot be regained while the ability causing it to be lost is in effect, even if a new effect would cause the characteristic to be gained.

See also: Keywords, Printed, Traits

MAIN SCHEME, MAIN SCHEME DECK

Main scheme is an encounter card type. The main scheme represents the villain’s primary objective.

- During step one of the villain phase, place the amount of threat indicated in the main scheme’s acceleration field (*bottom-right corner*) on that scheme. This value is modified by all active acceleration tokens and icons.
- If the amount of threat on a main scheme is equal to or greater than its target threat value, that main scheme is completed and the main scheme deck advances.
 - **If the villain completes the final stage of the main scheme deck, the villain wins the game.**
 - If the main scheme advances other than through having threat on it equal to or greater than its target threat value, that main scheme is **not** considered completed.
- When the main scheme deck advances, follow these steps:
 1. Remove the top main scheme card from the game. Return all tokens (except acceleration tokens) that were on that card to the token pool and discard each card attached to it.
 2. Resolve any “**When Revealed**” ability on the “A” side of the new top card of the main scheme deck.
 3. Flip the top card of the main scheme deck to its “B” side, place threat on that card equal to its starting threat value, and resolve any “**When Revealed**” ability on that side of the card.

- When the main scheme deck advances, excess threat from the previous stage does not carry over to the new stage.
- When the main scheme deck advances, acceleration tokens on it carry over to the new stage.
- Main scheme cards cannot be discarded from play.

See also: Acceleration Icon, Acceleration Token, Card Types, Encounter Card, Removed from the Game, Target Threat, Threat, Villain, Villain Phase

MAX, MAXIMUM

The words “max” and “maximum” impose a maximum across all copies of a card (*by title*) for all players.

- “Max X per [period]” imposes a maximum number of times that copies of that card can be played during the designated time period.
 - If a card with a maximum is canceled, the card is still counted toward the maximum.
- “Max X per deck” restricts the number of copies of that card that may be included in each player deck.
- “Max 1 per player” is player specific, and restricts the number of copies of that card that each player may control in play at a given time.
 - A player cannot take control of another copy of a “Max 1 per player” card they already control.
- “Max 1 per [game element]” restricts the number of copies of that card that can be attached to each indicated game element. (*For example, if an upgrade is “Max 1 per ally,” an ally can have at most one copy of that upgrade attached.*)
- “Max 1 per [instance]” restricts the number of times an ability can be triggered by a single instance of a triggering effect across all copies of the card with the maximum. (*For example, if an ability has the text “(Max 1 per event.),” only one card with that ability can be triggered per event played.*)
- The parenthetical “(to a maximum of [value])” within an ability imposes a maximum on that ability for the duration of that ability.

See also: Cancel, Limit, Appendix I: Deck Customization

MAXIMUM HIT POINTS

A character’s maximum hit points is their base hit points plus or minus all “gets” hit point modifiers that are active on that character.

See also: Ally, Base Value, Hit Points, Identity, Minion, Modifiers, Villain

MAY

The word “may” indicates that a specified player has the option to resolve the text that follows. If no player is specified, the option is granted to the controller of the card with the ability in question.

See also: Player

MENTAL RESOURCE (🧠)

A mental resource (🧠) is one of the four types of resources.

- Mental resources can be spent to pay the resource cost of cards and abilities.
- Some card abilities specifically require mental resources to be spent in order to resolve their effects.

See also: Ability, Cost, Energy Resource, Icons, Physical Resource, Resource, Wild Resource

MINION

Minion is an encounter card type. Minions represent supporters of the villain and/or enemies of the heroes.

If a minion enters play, it engages the player who is revealing the card from the encounter deck or resolving the ability that put the minion into play, unless an ability specifies otherwise.

- If a minion enters play, it remains in play until a card ability or game effect causes it to leave play.
- If a minion has zero or fewer remaining hit points, it is defeated and discarded.
- Minions engaged with a player activate (*one minion at a time and in an order of the engaged player’s choosing*) during step two of the villain phase, after the villain activates. If the engaged player is in hero form, these minions attack. If the engaged player is in alter-ego form, these minions scheme.
- If a minion engages a player during an enemy activation in which all minions engaged with that player are instructed to activate (*such as through a “Boost” ability during step two of the villain phase*), the newly-engaged minion will also activate.

See also: Card Types, Encounter Card, Engage, Enters Play, Form, Hit Points, Identity, Leaves Play, Player, Player’s Play Area, Villain, Villain Phase

MODES OF PLAY

Before starting a game of **Marvel Champions**, players can customize their experience by choosing from or combining different modes of play. The modes of play are:

Standard Mode — Standard Mode is the basic mode of play for all scenarios.

- To play in Standard Mode, follow the content and setup instructions for the chosen scenario.

Expert Mode — Expert Mode is a modification of standard mode for advanced players who seek a greater challenge.

- To play a standard game modified by expert mode, follow the content and setup instructions for the chosen scenario, using the listed expert mode villain stages, and add the Expert encounter set to encounter deck.
- Expert mode can also be combined with heroic mode, skirmish mode, and/or campaign mode.

Heroic Mode — Heroic mode is a modification of standard mode that allows players to scale the difficulty of the game.

- To play a standard game modified by heroic mode, before the game begins, the player group chooses a heroic level number (*such as heroic level 1 or 4*). Then, for the remainder of that game, during step three of each villain phase, deal X additional encounter cards to each player, where X is equal to the chosen heroic level number.
- Heroic mode can also be combined with expert mode, skirmish mode, and/or campaign mode.

Skirmish Mode — Skirmish mode (*also sometimes called Rookie Mode*) is a modification of standard mode that allows players to shorten the length of the game.

- To play a standard game modified by skirmish mode, before the game begins, the player group chooses any one version of the villain. During step eight of game setup (*Select Scenario*), put only the chosen version of the villain into play and remove each other version in the villain deck from the game.
- Skirmish mode can also be combined with expert mode, heroic mode, and/or campaign mode.

Campaign Mode — Campaign mode allows players to modify standard mode through interconnected scenarios that are played one after another. No two campaigns are exactly alike, and the rules for each are found in the campaign's associated rulebook.

- Expert campaign mode is a modification of campaign mode for advanced players who seek a greater challenge. The rules for each expert campaign mode are found in the campaign's associated rulebook.
- Each campaign comes with its own campaign log. The campaign log is a record of what effects or cards persist between games in a campaign.
- If a card is removed from a campaign, that card can no longer be used during the rest of the campaign, even if players retry the scenario wherein that card was removed.
- During campaign mode or expert campaign mode, players can choose which other mode(s) they wish to play for each individual scenario. The difficulty of the campaign mode does not require players to play any other specific game mode.
- Campaign mode (*and expert campaign mode*) can also be combined with expert mode, heroic mode, and/or skirmish mode.

See also: Campaign-Specific Card, Expert Set, Standard Set

MODIFIERS

The game constantly checks and (*if necessary*) updates the count of any variable quantity that is being modified.

Any time a new modifier is applied or removed, the entire quantity is recalculated from the start, considering the unmodified base value and all active modifiers.

- The “per player” icon (♠) is not considered a modifier and is applied before any modifiers are applied.
- The calculation of a value treats all modifiers as being applied simultaneously. However, while performing the calculation, all additive and subtractive modifiers are calculated before doubling and/or halving modifiers are calculated.
- If a value is “set” to a specific number, the set modifier overrides all non-set modifiers. If multiple set modifiers are in conflict, the most recently resolved set modifier takes precedence.
- After all active modifiers have been taken into account, if a value is below zero, it is treated as zero: a card cannot have “negative” icons, attributes, traits, cost, or keywords.
- Fractional values are rounded up after all modifiers have been applied.
- If a card ability causes a character to “get” a statistic (*such as +1 ATK or 4 hit points*), the ability modifies the character's statistic while it is active.
 - If such an ability expires or otherwise becomes inactive, the modified statistic reverts to the value it would have without the modifier.
- A value of a dash (–) cannot be modified.

See also: Base Value, Dash (Value), Printed

MODULAR ENCOUNTER SET

Cards belonging to a “modular encounter set” (*or sometimes “modular set”*) are a classification of encounter card that can be added to and/or removed from nearly any scenario.

- During game setup, many scenarios will instruct the players on how many modular encounter sets must be included in that scenario. Depending on the scenario, some modular encounter sets are required, while others can be chosen by the players.
- If a modular encounter set is added to a scenario, it is done so as an entire set. Unless specific scenario rules state otherwise, individual cards from a modular encounter set cannot be included in a scenario without the rest of that set.
- A modular encounter set card is designated by the modular encounter set's name with which it is associated printed at the bottom of the card in its encounter set name area.

See also: Classifications, Appendix I: Deck Customization

MOVE

Some abilities allow players to move game elements, such as cards, damage, or threat.

- When an element moves, it cannot move to its same (current) placement.
- If there is no valid source or destination for a move, the move cannot be made.
- It is possible for damage to move between dials and cards (and vice versa).
 - If damage is moved from a dial to a card, increase the hit points tracked by the dial by the specified amount (no higher than the card's maximum hit points), and place the same amount of damage on the card.
 - If damage is moved from a card to a dial, remove damage from the card and reduce the dial by the same amount.
- If damage is moved off a character, the moved damage is considered to be healed from that character.
- If damage is moved to a character, the moved damage is considered to be dealt to that character.
- If threat is moved off a scheme, the moved threat is considered to be removed from that scheme.
- If threat is moved to a scheme, the moved threat is considered to be placed on that scheme.

See also: Game Element

NEMESIS ENCOUNTER SET

Each identity in the game comes with an associated nemesis encounter set. At the start of the game, each player sets aside the cards from their associated nemesis set, out of play. Cards drawn from the encounter deck may instruct the player on how to bring their nemesis set into play.

- A nemesis encounter set is a subset of an identity-specific set.
- A nemesis set cards may only be used alongside an identity if those cards share a set icon with that identity.
- An identity's "nemesis minion" is the minion belonging to that identity's nemesis set.
 - If a nemesis set has multiple minions in it, the "nemesis minion" is designated by parenthetical text printed on one or more of those minions.
- An identity's "nemesis side scheme" is the side scheme belonging to that identity's nemesis set.

See also: Identity, Identity-Specific Card, In Play and Out of Play, Player

NON-NUMERICAL VARIABLE

If a non-numerical variable (such as a letter or other symbol) is defined to have a numerical value (such as a card ability assigning a value to 'X'), treat that variable as the defined value. If the variable is not defined (for instance, if the ability defining it has been blanked), treat that variable as being equal to 0.

- For costs involving the letter X, the value of X is defined by card ability or player choice, after which the amount paid may be modified by effects without changing the value of X.

See also: Base Value, Dash (Value), Printed, Star Icon

OBLIGATION

Obligation is an encounter card type that represents a commitment or obstacle that an identity's alter-ego might have to face or overcome.

- Abilities on obligations that use the words "you" or "your" apply only to the player whose play area the obligation is in.
- Each identity is associated with one or more obligation cards. If an identity is being played, all of that identity's associated obligation cards are shuffled into the encounter deck during setup.
- Identity-specific obligation cards are part of their associated identity's identity-specific set.
- Identity-specific obligation cards can only be used alongside an identity if those cards share a set icon with that identity.

If an obligation card is revealed from the encounter deck and that obligation instructs that it must be given to a specific player (such as "Give to the Peter Parker player"), place that obligation into the player's play area who controls the associated identity. That player must decide how to resolve the obligation.

- If an obligation cannot be given to the specified player for any reason, ignore the card's ability, remove it from the game, and reveal an additional encounter card.

If a player reveals an obligation card from the encounter deck and that obligation does not instruct that it must be given to a specific player, the player places that obligation into their play area. That player must decide how to resolve the obligation.

- Only the player with the obligation in their play area can trigger abilities or pay costs on that obligation.

If a player draws an obligation card from their player deck, they place that obligation into their play area.

- The player does not draw a card to replace the obligation unless they are refilling their hand to their hand size.

See also: Card Types, Encounter Card, Encounter Deck, Enters Play, Form, Identity, Leaves Play, Player, Player Elimination, Removed from the Game

“OTHERWISE”

Effects beginning with “otherwise” resolve only if the preceding effect was not resolved.

- An “otherwise” effect will resolve if one or more of the following are true of the preceding effect:
 - It has a condition that is not true. (For example, an ability reads: “If you are in hero form, take 2 damage. Otherwise, place 2 threat on the main scheme.” The “otherwise” portion resolves if the player is not in hero form.)
 - It has an effect that cannot at least partially resolve. (For example, an ability reads: “Discard 2 cards from your hand. Otherwise, exhaust your identity.” The “otherwise” portion resolves if the player cannot discard at least 1 card from their hand.)
- If “otherwise” is preceded by a semicolon, the “preceding effect” refers to the effects before the semicolon in the same sentence. If the “otherwise” effect is its own sentence, the “preceding effect” refers to the sentence coming directly before the “otherwise” sentence.

See also: Replacement Effect, Target

OVERKILL

If an ally is **defeated** by an attack with the overkill keyword, **deal any damage on that ally beyond its hit points** to the identity of the player who controls the ally.

If a minion is **defeated** by an attack with the overkill keyword, **deal any damage on that minion beyond its hit points** to the villain.

- The overkill keyword is equivalent to the following ability: “If this attack defeats an ally, deal the damage beyond its hit points to the identity of that ally’s controller. If this attack defeats a minion, deal the damage beyond its hit points to the villain.”
- Damage dealt by overkill to an identity or villain is considered damage from an attack, but does not constitute an attack against that character.
- If a card ability counts excess damage dealt, that ability counts the same value of excess damage that is calculated when resolving the overkill keyword.
- If excess damage from an attack with overkill is prevented, that damage is **not** dealt to the identity or villain.

See also: Ally, Attack (Enemy Activation), Attack (Player Ability Type), Damage, Hit Points, Identity, Keywords, Minion, Reminder Text, Villain

“OVERPAY”

See: Cost

OWNERSHIP AND CONTROL

A card’s owner is the player whose deck contained the card at the start of setup. The scenario is considered to be the owner of the encounter deck and each encounter card.

- Identity cards are owned and controlled by the player playing as that identity.
- Cards enter play under their owner’s control. Encounter cards are considered to be under the control of the scenario.
 - Upgrades attached to a card controlled by a player other than the upgrade’s owner are controlled by that other player.
 - When a player takes control of a campaign-specific or scenario-specific player card (such as an ally, support, or upgrade) with a player card back, that player becomes the owner of that card until the game ends or another player takes control of that card.
- Control of a card remains constant unless an ability explicitly causes the card to change control.
- A player controls the cards in their own out-of-play areas (such as the hand, the deck, and the discard pile).
- If a character changes control while it is in play, it remains in the same state (i.e., readied or exhausted, damaged or not, etc.) and is moved to its new controller’s play area.
- Upgrades on a card that changes control also change control to the same new controller.
- A change in control of a card remains in effect until one of the following occurs:
 - The ability that changed control of that card ceases to be in effect (for instance, when an attachment or upgrade that changes control of the attached card is removed), that card reverts to its owner’s control.
 - That card leaves play, it is placed in its owner’s equivalent out-of-play area (hand, deck, or discard pile, or removed from the game if that player is no longer in the game).
 - That card is an event that was played, it is placed in its owner’s discard pile.
 - That card is discarded from a player’s hand, it is placed in its owner’s discard pile.
- If a game step or card ability references a card that “you control” or a “player controls,” that game step or card ability only refers to cards in play currently under that player’s control.

See also: Classifications, Encounter Card, Encounter Deck, In Play and Out of Play, Player, Player Card, Player Deck, Player’s Play Area, Villain’s Play Area

PATROL

While a minion with the patrol keyword is engaged with a player, that player cannot use cards they control to thwart the main scheme.

- The patrol keyword is equivalent to the following constant ability: "The engaged player cannot thwart the main scheme."

See also: Engage, Keywords, Main Scheme, Minion, Reminder Text, Thwart

"PAY"

See: Cost

PER PLAYER ICON (P)

The P icon next to a value multiplies that value by the number of players who **started** the scenario.

- If a player is eliminated, this value does not change.

See also: Icons, Modifiers, Player Elimination

PERIL

While a player is resolving a card with the peril keyword, that player cannot consult other players, and other players cannot play cards or trigger abilities.

- The peril keyword is equivalent to the following constant ability: "While a player is resolving this card, that player cannot consult other players, and other players cannot trigger abilities. While this card is in a player's play area, other players cannot trigger abilities on this card."

See also: Ability, Keywords, Player, Reminder Text, Table Talk, Triggered Ability

PERMANENT

A card with the permanent keyword cannot be defeated, leave play, or have any part of its text box blanked, except by card abilities in the same set (*hero set, scenario set, or modular set*). (For example, an ability on a hero card can cause a permanent card within that hero's set to leave play.)

- The permanent keyword is equivalent to the following constant ability: "Set this card aside during setup. Effects on cards not from this card's set cannot defeat this card, remove this card from play, or blank any part of its text box."
- Permanent cards are set aside before step 1 of setup and are put into play later by abilities on other cards.
- Permanent cards do not count towards a player's minimum or maximum deck size.
- Permanent cards are not valid targets for card effects that would cause the permanent card to leave play.
 - If a permanent card would be targeted by such an effect (for example, "discard the lowest-cost support you control"), that effect instead targets the non-permanent card that fits its criteria.

- If the card to which a permanent attachment was attached leaves play, resolve that attachment's "attach to" text. If it has none or that text does not have a valid target, remove the attachment from the game.
- If a player is eliminated from the game while a non-attachment permanent card they do not own is in their play area, remove that permanent card from the game.

See also: In Play and Out of Play, Keywords, Leaves Play, Ownership and Control, Reminder Text

PHYSICAL RESOURCE (P)

A physical resource (P) is one of the four types of resources.

- Physical resources can be spent to pay the resource cost of cards and abilities.
- Some card abilities specifically require physical resources to be spent in order to resolve their effects.

See also: Ability, Cost, Energy Resource, Icons, Mental Resource, Resource, Wild Resource

PIERCING

An attack with the piercing keyword discards any tough status cards from the attacked character before dealing damage.

- The piercing keyword is equivalent to the following ability: "Before this attack deals damage to a character, discard each tough status card from that character."
- If an attack with the piercing keyword would deal no damage to the attacked character, it does not discard tough status cards from that character.

See also: Attack (Enemy Activation), Attack (Player Ability Type), Damage, Keywords, Reminder Text, Status Cards, Target, Tough

PLAY, PUT INTO PLAY

Playing a card involves paying the card's cost and placing the card in the play area. This causes the card to enter play (or, in the case of an event card, to resolve its ability and be placed in the discard pile). Cards are played from a player's hand.

Some abilities cause cards to be put into play. This bypasses the need to pay the card's cost as well as any restrictions or prohibitions regarding playing that card. A card that is put into play enters play in its controller's play area.

- Cards with the text "[type] form only" can only be played or put into play by a player whose identity is in the specified form.
- When an event card is played, place it on the table, resolve its ability, and place the card in its owner's discard pile.
- A card that is put into play is not considered to have been played.

- When a card is put into play, its resource cost is ignored.
- Unless otherwise stated by the “put into play” effect, cards that are put into play must do so in a play area or state that matches the rules of playing the card.

See also: Enters Play, In Play and Out of Play, Initiating Abilities, Leaves Play, Play Restrictions and Permissions

PLAY AREA

There are two types of play areas: a player’s play area and the villain’s play area.

- A player’s play area contains that player’s identity, deck, hand, discard pile, any cards in play under their control, and any faceup or facedown encounter cards in their play area (*such as engaged minions or encounter cards that have been dealt to them*).
- The villain’s play area contains the villain deck, main scheme deck, encounter deck, encounter discard pile, and any encounter cards in play that have not entered a player’s play area (*such as side schemes or environments*).
- A card cannot be in more than one play area at a time.

See also: In Play and Out of Play, Player’s Play Area, Villain’s Play Area

PLAY RESTRICTIONS AND PERMISSIONS

Many cards and abilities contain specific instructions pertaining to when or how they may or may not be used, or to specific conditions that must be true in order to use them.

- In order to use an ability or play a card, all of its play restrictions must be observed.
- A permission is an optional play restriction, which allows a player to play a card or use an ability outside the timing or specifications provided by the game rules. *For example, a permission might allow an ally card to be played from a player’s discard pile.*

See also: Ability, Play, Player

PLAYER

A player is a person who is playing in a game of **Marvel Champions**.

- Each player in the game has their own personal play area containing their identity card, their identity’s hit point dial, their hand of cards, their deck that they draw from, their discard pile that they place their discarded cards into, any allies, upgrades, or supports that they may have in play, and any attachments, minions, or obligations that they may have in their play area.

- During each player phase of each round, each player takes their own personal turn where they can play cards, perform actions with cards they control, and use various abilities.
- Each player owns the cards that were contained within their deck (*including their identity card*) at the start of the game.
- Some game steps, game functions, or card abilities may refer to the “first player”. The first player is the player who has the first player token.

See also: Discard, Discard Pile, Find, Identity, In Play and Out of Play, Player Deck, Player Elimination, Player Phase, Player Turn, Player’s Play Area, You

PLAYER CARD

There are seven player card types: ally cards, event cards, identity cards, player side scheme cards, resource cards, support cards, and upgrade cards.

- Player cards may belong to various classifications, such as identity-specific player cards or aspect player cards.
- Most player cards have a blue card back.

See also: Ally, Classifications, Event, Identity, Player Side Scheme, Resource Card, Support, Upgrade, Appendix I: Deck Customization

PLAYER DECK

A player’s deck contains the player cards (*allies, events, player side schemes, resources, supports, and upgrades*) owned by the player who started the game with that deck.

- The order of cards within a player’s deck cannot be changed unless a player is instructed to do so by a game step, game function, or card ability.

If a player deck empties, the player shuffles their discard pile to make a new deck. That player immediately deals themselves one facedown encounter card from the top of the encounter deck.

- If the player’s deck empties and reshuffles while the player was drawing cards, the player continues to draw cards up to the specified number.
- If the player’s deck empties while the player was discarding cards from their deck, no further cards are discarded from the newly shuffled deck.
- If a player deck empties and the player has no cards in their discard pile, the deck does not reset until there is at least one card in the player’s discard pile, then the player deals themselves one facedown encounter card.

See also: Discard, Discard Pile, Draw, Encounter Deck, Shuffle

PLAYER DISCARD PILE

See: Discard Pile

PLAYER ELIMINATION

A player is eliminated from the game if their identity is defeated. This usually occurs when the character's remaining hit points are reduced to zero.

When a player is eliminated, perform the following in order:

1. If the eliminated player has the first player token, they pass it to the next clockwise player.
2. If there are minions engaged with the eliminated player, each of those minions engages the next clockwise player, retaining any tokens, attached cards, boost cards, tucked cards, and status cards on them.
3. For each card in the eliminated player's play area that are not owned by that player, do the following:
 - If that card is an attachment with the permanent keyword, resolve its "attach to" text. If it has none or that text does not have a valid target, remove the attachment from the game.
 - Remove each non-attachment card with the permanent keyword from the game.
 - Place each other card in its owner's discard pile.
4. Place each card owned by the eliminated player in the eliminated player's discard pile.
5. Remove the eliminated player's play area and each other game element within it (*hand, deck, discard pile, cards in play, hit point dial, etc.*) from the game.

When a player is eliminated, the remaining players continue to play the game. Eliminated players no longer participate in the game but are considered to win or lose along with the rest of the group, depending on how they finish.

- If all players are eliminated, the game ends and the players lose.
- If a player is eliminated partway through the resolution of an ability, resolve the entire ability.
 - **If a player is eliminated in the middle of an attack, that attack ends.**
- Effects that refer to the players in the game ignore eliminated players, except for the per player icon (♠).

See also: Ability, Deal, Engage, Game Element, Hit Points, Identity, Minion, Per Player Icon, Player, Player Card, Player Deck, Player's Play Area, Winning the Game

PLAYER PHASE

During the player phase, each player (*in player order*) takes one turn.

After each player has taken a turn, the players discard down or draw up to their hand size and ready each exhausted card.

- Effects that last "until the end of the [player] phase" end after players draw up to their hand size and all cards are readied. Then, effects that resolve "when/after the player phase ends" are resolved.

See also: End of Player Phase, In Player Order, Player, Player Turn

PLAYER SIDE SCHEME

Player side schemes are missions the heroes undertake to facilitate defeating the villain. They are the player card equivalent of the side schemes found in the encounter deck.

- When a player side scheme enters play, it is placed next to the main scheme in the villain's play area.
- Each player side scheme enters play with an amount of threat on it equal to its starting threat value.
- The number of player side schemes in play at any time is limited by the player side scheme limit.
- A player side scheme remains in play until either there is no threat on it (which causes it to be defeated and either discarded or, if it has the victory X keyword, added to the victory display) or it is discarded due to there being more player side schemes in play than the limit.
- Any rules or card effects that refer to "schemes" or "side schemes" also refer to player side schemes.
 - Heroes and allies can remove threat from a player side scheme by performing a basic thwart.
 - Abilities that remove threat from "a scheme" or "a side scheme" can remove threat from a player side scheme.

See also: Card Types, Player Card, Player Side Scheme Limit, Scheme (Card Type), Side Scheme, Victory X

PLAYER SIDE SCHEME LIMIT

The number of player side schemes in play at any time is limited by the player side scheme limit.

- If one or two players started the game, the player side scheme limit is one. If three or four players started the game, the limit is two.
- If there are ever more player side schemes in play than the limit, the first player chooses and discards player side schemes until there are no longer more in play than the limit.
- **A player may play a player side scheme even while at the player side scheme limit. If they do, they must choose a player side scheme to discard. (The player side scheme discarded this way is not considered defeated.)**

See also: Player Side Scheme

PLAYER TURN

During their turn, a player may perform the following options, in any order. Each option, except "change form," may be performed as many times as the player is able, so long as they are able to pay the required costs.

- **Change form** from hero to alter-ego, or from alter-ego to hero. **This option may only be performed once each turn.**
- **Play** an ally, upgrade, support, or player side scheme card from hand.

- **Use** their alter-ego's basic recovery (*if in alter-ego form*) or their hero's basic attack or thwart power (*if in hero form*).
- **Use** an ally card they control in play to attack an enemy or thwart a scheme.
- **Trigger** an **"Action"** ability on:
 - a. A card in play they control.
 - b. An encounter card in play.
 - c. Any card in play with text that allows that player to trigger its action ability.
 - d. An event card in their hand (*by playing that event*).
 - If the action ability is preceded by "Hero" or "Alter-Ego", the player must be in the specified form in order to trigger the ability.
- **Ask** another player to trigger any **"Action"** ability that player could trigger on their own turn. The other player then decides whether or not to trigger the ability. (*Another player may offer to use an action during the active player's turn, as well.*)

See also: Ally, Basic Power, Encounter Card, Event, Form, Ownership and Control, Play, Player, Player Phase, Support, Triggered Ability, Upgrade

PLAYER'S PLAY AREA

A player's play area (*also sometimes referred to as a "player's game area"*) is the area of play where a player's identity card, deck, hand, discard pile, and hit point dial are located. Each player in the game has their own play area.

- Ally cards, support cards, and upgrade cards are placed in a player's play area when they enter play.
- Attachment cards attached to cards in the villain's play area are not in the player's play area.
- Minion cards engaged with a player are in that player's play area and not in the villain's play area.
- Obligation cards given to a player are in that player's play area and not in the villain's play area.
- While card abilities can affect cards across play areas, unless a game rule or card ability states otherwise, cards cannot be played into another player's play area.
- If a player is eliminated from the game (*through their identity being defeated, or otherwise*), their play area is removed from the game.

See also: Ally, Discard Pile, Identity, In Play and Out of Play, Minion, Obligation, Player Deck, Player Elimination, Support, Upgrade

PLAYING CARDS

See: Initiating Abilities

PREVENT

Some card abilities prevent damage or threat.

- When damage is prevented, reduce the amount of damage the target takes (*i.e. the amount of damage that is placed on the target*).
 - When an effect prevents damage dealt to a character, the amount of damage that character "takes" is reduced, but the amount of damage "dealt" is not reduced.
 - If an effect prevents all damage dealt to a character, that character is not considered to have taken damage.
 - If all damage from an attack is prevented, the attacking character is considered to have dealt damage, but is not considered to have "attacked and damaged" the attacked character.
 - If dealing damage is a cost, that cost is considered paid even if some or all of that damage is prevented.
 - If taking damage is a cost, that cost is not considered paid unless all of that damage was taken. (*If any of the damage is prevented, then the cost has not been paid.*)
- When threat is prevented, reduce the amount of threat being assigned before it is placed on the scheme.

See also: Ability, Cost, Damage, Scheme (Card Type), Target, Threat

PRINTED

The word "printed" refers to the text, characteristic, or value that is physically printed on the card.

- If a player must pay a cost using "printed resources," they may use resources generated by a card's ability, so long as the icon(s) for the resource(s) that card generates is printed in its text box.
 - Wild resources (★) cannot be spent as other resource types for such a cost.

See also: Base Value, Modifiers

QUALIFIERS

If ability text includes a qualifier followed by multiple terms, the qualifier applies to each item in the list, if applicable. *For example, in the phrase "each ready character and attachment" the word "ready" applies to both "character" and "attachment."*

QUICKSTRIKE

After a minion with the quickstrike keyword engages a player whose identity is in hero form, that minion attacks that player.

- The quickstrike keyword is equivalent to the following triggered ability: **"Forced Response (Hero):** After this minion engages a player, it attacks that player."
- If a minion with the quickstrike keyword is being revealed, the quickstrike keyword resolves after any **"When Revealed"** abilities on that minion are resolved.

See also: Attack (Enemy Activation), Engage, Form, Keywords, Minion, Player, Reminder Text, **Reveal**

RANGED

An attack with the ranged keyword ignores the retaliate keyword.

- The ranged keyword is equivalent to the following ability: **"This attack ignores the retaliate keyword."**

See also: Attack (Enemy Activation), Attack (Player Ability Type), Keywords, Reminder Text, Retaliate X

READY

Cards enter play in a ready state, positioned so that their controller can read their text from left to right.

- If a player is instructed to ready an exhausted card, the card is returned to its ready state.
 - If there is an additional cost for a player to ready a card, that player can choose not to pay that cost. If they do not pay the cost, the card does not ready.

See also: Enters Play, Exhausted

REC

See: Basic Power, Recover, Recovery

RECOVER, RECOVERY

Recovery is a basic power a player can use in alter-ego form. To recover, the player exhausts their alter-ego and heals a number of hit points equal to their REC value.

- An identity that has no damage to heal cannot perform a basic recovery.

See also: Basic Power, Form, Heal, Hit Points, Identity

REFERENTIAL ABILITY

Some abilities refer to specific cards by name. These are called referential abilities. If an ability refers to a title shared by multiple cards in the game, that ability refers only to the card(s) that match the criteria highest in this list:

1. The card on which the referential ability is printed.
 - Such an ability is a self-referential ability.

➤ For example, the basic ally Spider-Man's ability reads: **"Response:** After Spider-Man attacks or thwarts, choose another **WEB-WARRIOR** character → ready that character." This ability refers to the card it is printed on and does not trigger when another card called "Spider-Man" attacks or thwarts.

2. Cards associated with the same identity, including:

- The identity card
- Identity-specific cards
- The identity's obligation cards
- The identity's nemesis set
- Cards belonging to a side deck used by the identity.

3. Player cards (if the ability is on a player card) or encounter cards (if the ability is on an encounter card).

See also: Ability, Character, Classifications, Identity, Identity-Specific Card

REMAINING HIT POINTS

A character's remaining hit points is the amount of damage that character can take before reaching zero hit points.

- An identity's or villain's hit point dial represents their remaining hit points.
- To calculate remaining hit points for an ally or minion, start with the character's maximum hit points (as indicated by its printed value modified by any card abilities or game effects), and subtract their sustained damage (the number of damage counters on them).

See also: Hit Points, Identity, Sustained Damage, Villain

REMINDER TEXT

Some card abilities may include reminder text. Reminder text is italicized and in parentheses (*like this*). Reminder text has no effect on the game and is only intended to remind a player of a specific game function or rule.

REMOVED FROM THE GAME

A card that has been removed from the game is set aside and does not interact with the game in any manner for the duration of its removal. If there is no specified duration, a card that has been removed from the game is considered removed until the end of the game.

- "Removed from the game" is an out-of-play state.
- A card that has been removed from the game cannot reenter the game through any means.

See also: In Play and Out of Play, Leaves Play

REPLACEMENT EFFECT

A replacement effect replaces a specified effect with a different effect. Most replacement effects are interrupt abilities in the format of “when [triggering condition] would happen, do [replacement effect] instead.”

- When an effect is replaced, it is no longer considered imminent and no further interrupts or responses to that effect can be triggered.

See also: Ability, Alteration Effect, Cancel, Interrupt, “Otherwise”, Triggered Ability, “Would”

REQUIREMENT (RESOURCES)

A card with the requirement keyword cannot be played unless each resource of the specified type is spent while paying for that card’s cost.

- The requirement (resources) keyword is equivalent to the following constant ability: “When paying this card’s resource cost, you must spend the following resources: [resources].”
- A card with the requirement keyword cannot be played “ignoring its resource cost” because the required resources cannot be paid for it.

See also: Cost, Initiating Abilities, Keywords, Resource

RESOLVE

Effects, abilities, event cards, and treachery cards are each resolved under the following conditions:

- An effect is resolved when it is applied to the game state.
- An ability is resolved when it is triggered and one or more of its effects resolve.
- An event card is resolved when it is played and one or more of its abilities resolve.
- A treachery card is resolved when it is revealed and one or more of its abilities resolve.
- Constant abilities are never considered resolved. They are always active while the card they are on is in play.
- Card types other than events and treacheries are not considered resolved, though abilities on those other card types can be resolved.
- If all of the effects of an ability are canceled, that ability is not considered to have resolved.
- If all of the abilities of an event or treachery are canceled, that card is not considered to have resolved.

See also: Ability, Cancel, Event, Treachery

RESOURCE

Resources are used to pay the cost to play cards and to pay certain ability costs.

- A player can generate resources to pay a cost by discarding cards from their hand to generate the resource or resources indicated at the bottom-left corner of the card, or by using card abilities that generate resources.
- There are four types of resources in the game: energy (⚡), mental (🧠), and physical (💪), and wild (🌟). Wild resources can be used as their type or any of the other types.
- To pay the cost of playing a card, a number of resources equal to (or greater than) the card’s cost must be generated. For most cards, any type (or mix of types) of resources can be used to pay this cost.
- If an ability has a resource cost, a number of resources equal to or greater than this cost must be generated. Many abilities require specific resource types, and the specified types in the specified quantities must be generated in order to pay the cost of the ability.
- Excess resources generated toward any cost are lost, and do not carry over to future costs.

See also: Cost, Energy Resource, Icons, Mental Resource, Physical Resource, Wild Resource

RESOURCE ABILITY

A resource ability is a type of triggered ability, indicated by the bold “**Resource**” timing trigger.

- A resource ability can be triggered anytime the player who controls the ability is generating resources to pay a cost.
 - A resource ability that generates a resource only for a specific type of cost cannot be triggered when paying a cost not of that type. (For example, a resource ability that generates a resource for an aspect card cannot be triggered when paying for a non-aspect card.)

See also: Cost, Resource, Triggered Ability

RESOURCE CARD

Resource cards are a player card type. Their primary function is to be discarded from a player’s hand to generate resources.

These cards generally provide more (or more efficient) resources than other card types when they are discarded from a player’s hand to generate resources.

- Some resource cards have card text that is active while using the card to generate resources.
- Resource cards are considered to be an extension of an identity. If a player spends a resource, that resource is also considered to be spent by that player’s identity.

See also: Card Types, Energy Resource, Enters Play, Icons, Identity, Leaves Play, Mental Resource, Physical Resource, Player, Player Card, Resource, Wild Resource

RESOURCE TYPE

See: Resource

RESPONSE

A response ability is a type of triggered ability, indicated by the bold **"Response"** timing trigger. Response abilities may be **resolved** after the specified triggering condition occurs, as described in the response's ability text.

- Players can only trigger response abilities on cards they control or on encounter cards.
 - Players cannot trigger response abilities on obligations in other players' play areas.
- Multiple responses may be **triggered** from the same triggering condition, but each response may only be triggered once per occurrence of the triggering condition.
 - Multiple copies of a card with a response can each be triggered by the same triggering condition.
- If single effect causes multiple triggering conditions to occur, responses to each of those triggering conditions can be resolved in any order. *(For example, if an attack triggers both "after you attack" and "after you defeat" responses, those responses can be resolved in any order.)*
- Once all players decide they do not wish to resolve any (further) responses to a triggering condition, (further) responses to that instance of that triggering condition cannot be used.

See also: Ability, Triggered Ability, Triggering Condition

RESTRICTED

A player cannot have more than two cards with the restricted keyword in play under their control at the same time.

A player can play or put into play a restricted card even if they already control two restricted cards. However, if a player ever controls more than two restricted cards in play, they must immediately choose and discard from play restricted cards they control until they have only two in play.

- The restricted keyword is equivalent to the following triggered ability: **"Forced Response: After you take control of this card, if you control more than 2 restricted cards, discard all but 2 of those cards."**

See also: Discard, Keywords, Ownership and Control, Player, Reminder Text

RETALIATE X

After a character with the retaliate X keyword is attacked, deal X damage to the attacker. (*X is the value next to the retaliate keyword.*)

- The retaliate X keyword is equivalent to the following triggered ability: **"Forced Response: After this character is attacked, deal X damage to the attacker."**
- The character with retaliate X must be in play after the attack resolves to deal this damage.

See also: Ally, Attack (Enemy Activation), Attack (Player Ability Type), Damage, Identity, Keywords, Minion, Reminder Text, Villain

REVEAL

During step four of the villain phase, each player (*in player order*) reveals and resolves all facedown encounter cards that have been dealt to them, one card at a time in the order in which they were dealt.

To reveal an encounter card, follow these steps:

1. Turn the encounter card faceup.
2. If the encounter card's type is:
 - **Attachment:** It enters play attached to the game element specified by its **"attach to"** text. *If it does not have "attach to" text, place it on the table in front of the player revealing it. (It is not in play.)*
 - **Environment:** It enters play in the villain's play area.
 - **Minion:** It enters play in the play area of the player revealing it. It is considered to engage that player.
 - **Obligation:** It enters play in the play area of the player revealing it.
 - If the card specifies a player to give it to, that player is considered to be revealing it.
 - **Side scheme:** It enters play in the villain's play area.
 - **Treachery:** Place it on the table in front of the player revealing it. *(It is not in play.)*
 - **Other:** Place it on the table in front of the player revealing it. *(It is not in play.)*
3. Resolve each **"When Revealed"** ability on that card (*including those provided by keywords*).
4. If the card is a treachery, discard it.

If a player is instructed by card text to reveal an encounter card from the encounter deck or any other game area, this same resolution procedure applies.

- Responses (both forced and non-forced) to any step of the revealing of an encounter card are not resolved until after all steps of the reveal process have been completed.

ROOKIE MODE

See: Modes of Play

ROUND STRUCTURE

See: Overview - Round Overview, End of the Player Phase, Player Phase, Player Turn, Villain Phase

RUNNING OUT OF CARDS

See: Encounter Deck, Player Deck

SCENARIO-SPECIFIC CARD

Cards in the “scenario-specific” classification are cards that belong to a scenario’s set of accompanying cards.

- A scenario must include each scenario-specific card associated with that scenario. The exact quantity of each card in that set is determined by the scenario.
- In most scenarios, the scenario-specific cards are separated into three decks: the villain deck (*comprised of that scenario’s villain cards*), the main scheme deck (*comprised of that scenario’s main scheme cards*), and the encounter deck (*comprised of that scenario’s attachment, environment, minion, side scheme, and treachery cards*).
- A scenario-specific card is designated by the name of the scenario with which it is associated printed at the bottom of the card in its encounter set name area.

See also: Classifications, Main Scheme Deck, Villain Deck, Appendix I: Deck Customization

SCH

See: Basic Power, Scheme (Enemy Activation)

SCHEME (CARD TYPE)

The word “scheme” denotes three different card types: main schemes, player side schemes, and side schemes.

- If a card ability places threat on or removes threat from “a scheme,” the player resolving that ability chooses which scheme—main scheme or side schemes—that ability affects.

See also: Main Scheme, Player Side Scheme, Side Scheme

SCHEME (ENEMY ACTIVATION)

A scheme is a type of enemy activation. If an enemy is instructed to scheme, follow these steps:

1. If a villain, or a minion with the villainous keyword, is scheming, give it one facedown boost card from the encounter deck. (*If a minion without the villainous keyword is scheming, skip this step.*)
2. Resolve each of the scheming enemy’s boost cards, one at a time and in the order in which they were dealt, by doing the following:
 - a. Flip the boost card faceup.

- b. Resolve any “Boost” abilities, indicated by the star icon in the boost area. (*All other abilities on the boost card are ignored.*)
 - c. Increase the scheming enemy’s SCH value by one for each boost icon on the card.
 - d. Discard the boost card.
 - e. If the enemy has any boost cards remaining, repeat these steps with the next boost card.
3. Place threat on the main scheme equal to the scheming enemy’s modified SCH value.

See also: Activation, Boost, Minion, Modifiers, Villain, Villain Phase, Villainous

SEARCH

When a player is instructed to search for a card, the player is permitted to look at each of the cards in the searched area.

If the player finds a card that satisfies the criteria of the search, the player adds that card to the game area indicated by the instructions on the search effect.

- If a player finds multiple cards that satisfy the criteria of a search, the player chooses among those options.
- Cards being searched are not considered to leave the searched area.
- If any portion of a deck is searched, upon completion of that game step, game function, or card ability, shuffle that entire deck.
- If a player is instructed to “search [their] collection” for a card, the player looks through all of their **Marvel Champions** cards outside of the current game for the specified card.
 - They become the owner of that card until the end of the game.

See also: Encounter Deck, Find, Player Deck, Shuffle

SELF-REFERENTIAL

See: Referential Ability

SET ASIDE, SET-ASIDE

Some game steps or card abilities instruct players to set aside specific cards. Set-aside cards are out of play and have no interaction with the game until they are referenced by instructions within the scenario or by a card ability.

See also: Ability, In Play and Out of Play, Appendix II: Setup

SET ICON

The set icon is an indicator on a card of that card’s product of origin, located in the card’s collector information at the bottom of the card.

See also: Appendix III: Card Anatomy

SETUP (KEYWORD)

A card with the setup keyword begins the game in play.

- Cards with the setup keyword are put into play during the “Put Setup Cards Into Play” step of setup.

See also: Keywords, Reminder Text, Appendix II: Setup

SETUP (TRIGGERED ABILITY)

“Setup” is a type of triggered ability that is resolved during setup.

- Setup abilities are mandatory.
- Setup abilities on encounter cards are resolved during the “Resolve Scenario Setup and When Revealed Abilities” step of setup.
- Setup abilities on player cards are resolved during the “Resolve Character Setup Abilities” step of setup.

See also: Triggered Ability, Appendix II: Setup

SHUFFLE

Shuffling is the game function of randomizing the contents of a deck.

- If a player is instructed to shuffle a deck, that deck must be randomized to the point where no player within the game can ascertain the order of the cards within that deck.
- Any time a deck is searched by a game step or card ability, that deck is shuffled after the game step or card ability completes its resolution.

See also: Encounter Deck, Player Deck, Search

SIDE SCHEME

Side scheme is an encounter card type that represents additional obstacles and distractions the heroes are confronted with.

If a side scheme is revealed, it enters play and is placed next to the main scheme deck in the villain’s play area.

- Each side scheme enters play with an amount of threat on it equal to the card’s starting threat value (*indicated at the bottom of the card*).
- A side scheme remains in play until there is no threat on it (*which causes it to be defeated and discarded*), or until a card ability removes it from play. (*Threat can be removed from side schemes by using the thwart power of heroes and allies, or by using card abilities.*)

See also: Card Types, Defeat, Encounter Card, Enters Play, Leaves Play, Main Scheme, Threat, Thwart, Villain’s Play Area

SIMULTANEOUS RESOLUTION

If two or more effects with the same bold timing trigger would resolve simultaneously, the first player determines the order in which the effects resolve.

See also: “Each Player”, Triggered Ability

SKIRMISH MODE

See: Modes of Play

SPECIAL

A special ability is a type of triggered ability, indicated by the bold “**Special**” timing trigger. Special abilities may only be **resolved** through the explicit instruction of another card ability.

See also: Triggered Ability

STALWART

A character that has the stalwart keyword cannot be stunned or confused.

- The stalwart keyword is equivalent to the following constant ability: “This character cannot have confused or stunned status cards.”
- If a character gains the stalwart keyword while they have a stunned and/or confused status card, each stunned and/or confused status card is removed from that character.

See also: Ally, Confuse, “Gains”, Identity, Keywords, Minion, Reminder Text, Status Cards, Stun, Villain

STANDARD MODE

See: Modes of Play

STANDARD SET

The standard set is an encounter set that is added to most scenarios.

- The standard set is not a modular encounter set and cannot be selected (*by the players or randomly*) when a scenario requires players to choose a modular encounter set to include in that scenario.
- Cards in the “Standard” classification are any cards that have the word “Standard” printed by the bottom of the card in its encounter set name area.

See also: Classifications, Appendix I: Deck Customization

STAR ICON (★)

A star icon is used in conjunction with card’s stat or boost field to indicate that there is a mandatory ability in the text box that corresponds to that field. In and of itself, the star icon has no effect; it is merely a reminder to check the card’s text box whenever that field is used.

- If a star icon is located next to an enemy’s ATK or SCH value, the icon serves as a reminder to check that enemy’s text box whenever that enemy uses that value to attack or scheme.
- If a star icon is located in the ATK or SCH field of an attachment, the icon serves as a reminder to check that attachment’s text box whenever the attached enemy uses the value that field is modifying to attack or scheme.

- If a star icon is located next to an ally's ATK or THW value, the icon serves as a reminder to check that ally's text box whenever that ally uses that value to attack or thwart.
- If a star icon is located next to a hero's ATK, THW, or DEF, or next to an alter-ego's REC value, the icon serves as a reminder to check that character's text box whenever they use that value to attack, thwart, defend, or recover.
- If a game step or ability references a power with the value of star (★), that value is **defined in that card's text**. If it is not defined (for instance, if the card's text is blanked), that value is treated as 0.
- If a star icon is located in an encounter card's boost field, the icon serves as a reminder to check that card's text box whenever that card is turned face up as a boost card during the villain's activation.

See also: Activation, Ally, Attachment, Basic Power, Boost, Identity, Minion, Non-Numerical Variable, Villain

STATUS CARDS

Status card represent different states a character may find themselves in during the game.

The following status cards are used in the game. When a character is given a status card, take a status card of the specified type from the pool and place it on that character.

- A character cannot have more than one status card of each type at a time.
 - Characters with the steady keyword can have one additional confused status card and one additional stunned status card.
- Status card abilities have timing priority over all conflicting triggered abilities.

The three status card types are:

Confused — A confused status card cancels a character's next scheme or thwart. **See:** Confuse, Confused.

Stunned — A stunned status card cancels a character's next attack. **See:** Stun, Stunned.

Tough — A tough status card prevents a character from taking damage. **See:** Tough.

See also: Ally, Attack (Enemy Activation), Attack (Player Ability Type), Basic Power, Damage, Form, Identity, Minion, Replacement Effect, Triggered Ability, Villain

STEADY

A character with the steady keyword can have one additional stunned status card and one additional confused status card. That character is not stunned unless they have two stunned status cards, and is not confused unless they have two confused status cards. After that character's attack, scheme, or thwart is canceled by a status card effect, remove all status cards of the corresponding type from that character.

- The steady keyword is equivalent to the following constant ability: "This character can have 1 additional confused status card and 1 additional stunned status card. While this character has fewer than 2 confused status cards, it is not considered confused and confused status cards on it do not resolve. While this character has fewer than 2 stunned status cards, it is not considered stunned and stunned status cards on it do not resolve."

See also: Confuse, Keywords, Status Cards, Stun

STUN, STUNNED

Stun is a status that cancels a character's next attack.

- A stunned status card resolves like the triggered ability: "**Forced Interrupt:** When this character would attack, remove each stunned status card from it instead."
- If an ability "stuns" a character, give that character a stunned status card.
- A character is stunned if it has a stunned status card.
 - A character with the steady keyword is stunned only if it has two stunned status cards.
- If a character has an ability stating that it "cannot be stunned," stunned status cards cannot be placed on that character.
- If a stunned identity or ally attempts to attack or use an attack ability, discard the stunned card instead. Costs associated with the attack attempt, including exhausting the character, must still be paid.
 - A stunned character can attempt to attack or use an attack ability even if it has no valid target for an attack.
- If a stunned villain or minion would attack, discard the stunned status card instead.
- As the attack action or attack activation was replaced by the removal of the stunned status card, that character is not considered to have attacked.

See also: Ally, Cancel, Identity, Minion, Status Cards, Target, Villain

SUBTITLE

Some ally cards have a subtitle beneath the title. A subtitle represents an alternate alias a character sometimes uses.

See also: Unique Icon

SUPPORT

Support is a player card type that represent locations, backline supporters or friends, and other behind-the-scenes elements a hero or alter-ego might have at their disposal.

- Support cards enter play in the back row of a player's play area.
- A support card is active while it is in play, and it remains in play until a card ability causes it to leave play.
- Attacks, thwarts, defenses, action abilities, and triggered abilities that resolve from supports in play under a player's control are not considered to be performed by that player's identity.

See also: Card Types, Enters Play, In Play and Out of Play, Leaves Play, Player Card, Player's Play Area

SURGE

When an encounter card with this keyword is revealed, the player resolving the card **deals themselves a facedown** encounter card from the top of the encounter deck.

- The surge keyword is equivalent to the following triggered ability: "**When Revealed:** Deal yourself 1 facedown encounter card."
- Complete the process of resolving the original card, as well as any response abilities that are triggered by that card being revealed, before revealing the additional card.

See also: Encounter Card, Encounter Deck, Keywords, Reminder Text, Reveal

SUSTAINED DAMAGE

Sustained damage refers to the difference between a character's maximum hit points and remaining hit points.

- To calculate sustained damage for an identity or villain (using a hit point dial), start with the character's maximum hit points (as indicated by its printed value modified by any card abilities or game effects), and subtract their remaining hit points (as indicated by the dial).
- Sustained damage on an ally or minion is equal to the total value of all damage tokens on the card.

See also: Ally, Damage, Hit Points, Identity, Maximum Hit Points, Remaining Hit Points, Villain

"SWAP"

An instruction to "swap" two components means to exchange the location of those two components.

- A swap cannot be completed if there is not a component in both locations.
 - For example, you cannot "swap a card in your hand with the top card of your deck" if you have no cards in hand.

- Swapped cards maintain the orientation (such as ready or exhausted, faceup or facedown) of the original card.
- Swapping a card in hand with the top card of a deck is **not** considered drawing that card.
- When swapping a card in a play area with a card in an out-of-play area, if those two cards:
 - Share a title, neither card is considered to enter or leave play. Tokens, attached cards, tucked cards, and status cards on the previously in-play card are transferred to the other card and the other card maintains the state (*ready or exhausted*) of the previously in-play card. If the swapped card has an associated hit point dial, that dial remains at the same value.
 - Do not share a title, the in-play card is considered to leave play and the out-of-play card is considered to enter play. Tokens, attached cards, tucked cards, and status cards on the previously in-play card are **not** transferred to the other card and the other card enters play ready. If the swapped card has an associated hit point dial, that dial is reset to the new card's printed hit point value.

See also: Ability, Target

TABLE TALK

Players are permitted and encouraged to talk to one another during play, and to work as a team to plan and execute the best course of action. Players can discuss anything they would like, including cards in play and cards in their hand. Players are not obligated to disclose the cards in their hand if they do not wish to do so.

- While resolving an encounter card with the peril keyword, players are not permitted to consult with one another.

See also: Keywords, Peril, Player

TARGET

If a game function or card ability is directed toward a game element (such as an attack that deals damage to an enemy), that game element becomes the target of that function or ability for the duration of that function's or ability's resolution.

- Examples of targets include but are not limited to: "the villain," "a minion," "an enemy," "a scheme," "a hero," "an ally," "a character," "a player," "you," "a card."
- If an ability or game function requires one or more targets, that ability or game function can only be initiated if it has at least one valid target. For example, an ability that says "deal 5 damage to a minion" cannot be initiated if there are no minions in play.
 - Basic powers are game functions that require a valid target.

- The phrase “choose a [game element]” indicates that one or more targets must be selected in order for an ability to initiate.
- Abilities that cause a player to draw one or more cards always have a valid target so long as that player has at least one card in their deck.
- A target is valid for an ability or game function if any part of that ability can affect that target.
 - *Examples of effects on a target include but are not limited to: dealing/healing damage, adding/removing threat, giving/removing a status card, exhausting/readying the target, defeating/discarding the target.*
 - **Exception:** A character with an ATK, SCH, or THW of 0 can perform an activation or basic power using that value against a target that is otherwise valid for that activation or basic power. *(For example, a hero with a THW of 0 can perform a basic thwart against a scheme with threat on it.)*
 - The cost of an ability or game function is not considered when determining if that ability or game function can affect a target.
 - If an ability or game function has multiple effects on its target, the target is valid if at least one of those effects can affect the target.
 - A target is not valid for an ability if that ability would cause the target to perform a game function that another ability says the target cannot perform. *For example, a character with an attachment that says “attached character cannot ready” is not a valid target for a card that readies a character.*
 - Damage that is dealt but not taken *(for example, if the damage is prevented)* is considered to affect a target.
 - A target that “cannot take damage” is not a valid target for an ability **or game function** whose only effect on that target is to deal it damage.
 - A target that cannot be attacked is not a valid target for an attack-labeled ability.
 - A target that cannot be thwarted is not a valid target for a thwart-labeled ability.
- An ability or game function that targets multiple game elements of a specific type *(for example, “each enemy”)* can be initiated as long as at least one of those game elements is a valid target.
 - That ability or game function does not resolve against any of those game elements that is not a valid target.
 - *For example, the crisis (🚨) icon prevents threat from being removed from the main scheme. An ability that says “remove 1 threat from each scheme” can be used while there is a crisis icon in play if there is at least 1 scheme from which threat can be removed. In this case, no threat would be removed from the main scheme.*

- An ability that refers to a future target (i.e. “the next card you play”) does not require a target to initiate.
- An ability with a search effect requires only a searchable game area in order to initiate.

See also: Ability, Choose (Game Element), Cost, Game Element, Labeled Ability

TARGET THREAT

Target threat is the amount of threat required for the main scheme deck to advance. It is located in the upper left corner of the card, before the title.

See also: Main Scheme, Threat

TEAM-UP

The team-up keyword names two characters. In order for a player to include a card with the team-up keyword in their deck, that player’s chosen identity must match one of the named characters. Additionally, a card with the team-up keyword cannot be played unless both of the named friendly characters (*identity or ally*) are in play.

- The team-up (name 1 and name 2) keyword is equivalent to the following constant ability: “You cannot include this card in your deck unless your alter-ego or hero title matches name 1 or name 2. You cannot play this card unless there is a friendly character in play whose title or subtitle matches name 1 and a friendly character in play whose title or subtitle matches name 2.”
- An ally counts as a named character if either its title or subtitle matches the named character.

See also: Ally, Identity, In Play and Out of Play, Keywords, Play, Reminder Text, Appendix I: Deck Customization

TEAMWORK (TRAIT)

After a minion with teamwork enters play and engages a player, if there is at least one other minion that shares the specified trait in play, the minion that just entered play activates against the player it is engaged with.

- The teamwork (**TRAIT**) keyword is equivalent to the following triggered ability: “**Forced Response:** After this minion enters play, if there is another **TRAIT** minion in play, this minion activates against the engaged player.”
- If a minion with the teamwork keyword is being revealed, the teamwork keyword resolves after any “**When Revealed**” abilities on that minion are resolved.

See also: Activation, Engage, Keywords

TEMPORARY

A card with temporary must be discarded from play at the end of the round.

- The temporary keyword is equivalent to the following triggered ability: **"Forced Interrupt: When the round ends, discard this card from play."**

See also: Keywords

TEXT BOX

The text box of a card is the area of a card that contains the card's printed abilities, traits, and flavor text (if any).

- If a card ability references a card's "text box," that ability only references the printed abilities within that card's text box.
 - Icons printed within a card's text box are considered abilities within that text box.

See also: Ability, Printed, Traits, Appendix III: Card Anatomy

"THAT"

See: Alteration Effect, Target

"THEN"

If the effect text of an ability includes the word "then", the text preceding the word "then" must be fully true or resolved before the remainder of the effect described after the word "then" can be resolved.

- If the pre-"then" text of an effect fully resolves, the post-"then" text of the effect must also attempt to resolve.
- If the pre-"then" text of an effect does not fully resolve, the post-"then" text does not attempt to resolve.

"THIS"

See: Alteration Effect

THREAT

Threat tokens are used to track the amount of threat on scheme cards.

See also: Component Limitations, Scheme (Card Type), Scheme (Enemy Activation), Main Scheme, Side Scheme, Prevent, Thwart

THW

See: Basic Power, Thwart

THWART

Some game effects and card abilities reference a thwart attempt. There are a few different ways this can occur:

- A hero or ally can use their basic thwart power to thwart a scheme. A character must exhaust to use this power. This removes threat equal to the character's THW value from the scheme.
 - A character can only initiate a basic thwart if there is a scheme with at least one threat for the character to remove or if that character is confused.
 - An ability that allows a hero or ally to "make a basic thwart without exhausting" can allow an exhausted character to make a thwart attempt.
- If a triggered ability is labeled as a thwart—such as **"Hero Action (thwart)"**—resolving that ability is considered to thwart the specified scheme. Unless specified by the ability's text, a hero does not exhaust when using such an ability.
 - An ability labeled as a thwart is considered a single thwart, even if that thwart removes multiple instances of threat.
 - If an ability increases the amount of threat an ability labeled as a thwart removes and that ability removes multiple instances of threat, each of those instances that does not use the word "additional" is increased by the specified amount.

See also: Ally, Basic Power, Consequential Damage, Exhausted, Labeled Ability, Main Scheme, Modifiers, Side Scheme, Threat

TIMING

See: Ability, Interrupt, Response, "Would"

TOUGH

Tough is a status that prevents a character from taking damage.

- A tough status card resolves like the triggered ability: **"Forced Interrupt: When this character would take damage, remove a tough status card from it instead."**
- If a character with a tough status card would take any amount of damage, prevent all of that damage and discard a tough status card from that character instead.
 - A character with multiple tough status cards discards only one tough status card each time it would take damage.
 - When a hero with a tough status card defends an attack, they reduce the damage from the attack by their DEF first. If the damage is reduced to 0, the hero does not lose their tough status card.
- As a tough status card prevents damage fully, the character who had the tough status card is not considered to have taken damage.

See also: Damage, Overkill, Status Cards, Toughness

TOUGHNESS

When a character with the toughness keyword enters play, place a tough status card on it.

- The toughness keyword is equivalent to the following triggered ability: **"Forced Response: After this character enters play, give it a tough status card."**

See also: Ally, Enters Play, Identity, Keywords, Minion, Reminder Text, Status Cards, Villain

TRAITS

Many cards have one or more traits listed at the top of the text box and printed in bold italics.

- Traits have no inherent effects on the game. Instead, some card abilities reference cards that possess or lack specific traits.
- Traits are not considered to be part of a card's printed text box for the purpose of card abilities.

See also: Printed, Appendix III: Card Anatomy

TREACHERY

Treachery is an encounter card type that represent tactics, tricks, disasters, and other immediate occurrences that confront players during a scenario.

- If a treachery card is revealed from the encounter deck, the player revealing the card must resolve its effects.
- After resolving the effects of a treachery card (*or the effects are canceled*), place the card in the encounter discard pile.
 - If a treachery causes one or more enemies to activate as its last effect, that treachery card is considered resolved and is discarded after all of those activations have resolved.

See also: Card Types, Discard, Encounter Card, Encounter Deck, Reveal, Villain

TRIGGERED ABILITY

A triggered ability is indicated by a bold timing trigger followed by a colon and the rest of the ability text.

See also: Ability, Action, Forced, Interrupt, Resource Ability, Response, Setup (Triggered Ability), Simultaneous Resolution, Special, Triggering Condition, When Defeated Abilities, When Revealed Abilities

TRIGGERING CONDITION

A triggering condition is a specific occurrence that takes place in the game. On card abilities, the triggering condition is the element of the ability that references such an occurrence, indicating the timing point at which the ability may be used. The description of an ability's triggering condition usually follows the word "when" or "after."

- Each **"Interrupt"** and **"Response"** ability can only be triggered once per occurrence of its triggering condition.
 - Multiple copies of a card with an interrupt or response can each be triggered by the same triggering condition.
- If a single game occurrence creates multiple triggering conditions (*such as a single attack causing a character to both take damage and be defeated*), those triggering conditions are handled with a single interrupt window and a single response window. During each of these windows, abilities that refer to any of the triggering conditions created by the occurrence may be used in any order.

See also: Interrupt, Response

TUCK

When a player is instructed to tuck a card under another card, they place the tucked card faceup under the other card.

- Tucked cards are not in play and are not considered "attached" to the card under which they are tucked.
- When a card leaves play, each card tucked under it is discarded.

See also: In Play and Out of Play

UNDEFENDED

See: Attack (Enemy Activation)

UNIQUE ICON (+)

The unique icon indicates a card that represents a singular person, place, or thing within the Marvel universe.

- Two unique cards are considered to "match" if any of the following apply:
 - The two cards share a title, and both have no subtitle and no alter-ego title. (*For example, two copies of the Jarnbjorn upgrade, or the Jessica Jones ally and the Jessica Jones minion.*)
 - The subtitle or alter-ego title of one matches the title, subtitle, or alter-ego title of the other. (*For example, the identity with the T'Challa alter-ego, the T'Challa ally, and the Black Panther ally with the subtitle "T'Challa" are all considered to match.*)
- During deckbuilding, a player cannot include multiple matching cards in their deck. The identity is included in this evaluation.
 - Once setup for a game has begun, a player is not prevented from adding matching cards to their deck through game effects.
- When choosing identities during setup, players cannot choose identities that match.
 - The players may choose a scenario even if one or more villains match one or more chosen identities.

- A non-villain card in an out-of-play state that matches a card in play cannot enter play. If the out-of-play card is:
 - A player card, it cannot be played or put into play. Any effect that attempts to do so has no effect.
 - A non-villain encounter card, it is discarded and any effects of it entering play are ignored. If it was being revealed, any effects of it being revealed are ignored and the player revealing it is dealt a facedown encounter card.

See also: Ally, Enters Play, Identity, Minion, Player, Subtitle, Villain, Appendix I: Deck Customization

UPGRADE

Upgrade is a player card type that represents powers, attacks, equipment, and other assets that are (in most cases) at an identity's immediate disposal.

- An upgrade is active so long as it is in play, and it remains in play until a card ability causes it to leave play.
- Most upgrade cards enter play near a player's identity card, and modify the player's hero or alter-ego (or both).
- Some upgrades enter play and "attach to" another card. These upgrades modify the card they are attached to, not the hero or alter-ego of the player who played the upgrade.
 - A player controls any upgrades attached to characters they control, including upgrades owned by another player.
- Unless attached to a different friendly character, upgrade cards are considered to be an extension of the controlling player's identity. Attacks, thwarts, defenses, action abilities, and triggered abilities that resolve on such upgrades are also considered to be resolved by that player's identity.

See also: Attach To, Card Types, Enters Play, Identity, In Play and Out of Play, Leaves Play, Ownership and Control, Player Card, Player's Play Area

USES (X "TYPE")

When a card with this keyword enters play, place X all-purpose counters from the token pool on the card. The word following the value establishes and identifies the type of uses the card holds.

Each card with this keyword also has an ability that references the type of use established by the keyword as part of the cost.

When the last all-purpose counter is removed from a card with uses, discard that card.

- The uses (X "type") keyword is equivalent to the following constant ability: "This card enters play with X all-purpose counters. These are 'type counters.' If there are no all-purpose counters on this card, discard this card."

See also: All-Purpose Counter, Discard, Enters Play, Keywords, Leaves Play, Reminder Text

VALID TARGET

See: Target

VICTORY DISPLAY

The victory display is an out-of-play game area shared by all players. Cards in the victory display follow the standard rules for out-of-play cards.

See also: In Play and Out of Play, Player, Victory X

VICTORY X

When a card with the victory X keyword leaves play under the following conditions, place it in the victory display instead of its owner's discard pile:

- The victory X keyword is equivalent to the following ability based on the card with the keyword:
 - Character or side scheme: "When Defeated: Add this card to the victory display."
 - Attachment: "Forced Interrupt: When the attached card is defeated, add this card to the victory display."
 - Card with the uses (X "type") keyword: "If there are no all-purpose counters on this card, add this card to the victory display instead of discarding it."
- A character or side scheme with the victory X keyword is placed in the victory display when it is defeated.
- An attachment or upgrade with the victory X keyword is placed in the victory display when the card to which it is attached is defeated. (The card the attachment or upgrade was attached to is discarded as normal.)
- A card with both the victory X and uses (X "type") keywords is placed in the victory display when its last all-purpose counter is removed from it.

While in the victory display, X indicates how many victory points that card is worth. (X is the value next to the victory keyword.)

- Some scenarios or campaigns may count the number of victory points in the victory display.

See also: Defeat, Discard Pile, Keywords, Reminder Text, Uses (X "Type"), Victory Display

VILLAIN, VILLAIN DECK

Villain is an encounter card type that represents the primary enemy the players are attempting to defeat in a scenario.

The villain is represented by a sequential deck of one or more cards. The players defeat the villain by reducing the hit points of each stage of the villain deck to zero.

- Villain cards cannot be discarded from play.

See also: Activation, Attack (Enemy Activation), Scheme (Enemy Activation), Villain Defeat

VILLAIN DEFEAT

If the villain's hit point dial is reduced to zero, the players have defeated that stage of the villain.

Remove the current stage of the villain deck from the game. The next sequential stage of the villain deck is revealed. Set the villain's hit point dial as indicated by that stage.

If the final stage of the villain deck is defeated, the players win the game.

- The revealing of a villain cannot be canceled.
- Excess damage that is dealt to defeat a villain stage does not carry over to the new stage.
- If the new stage of the villain has the same title as the previous stage:
 - The new stage of the villain is considered the same character as the defeated stage for purposes of card abilities (*such as the retaliate X keyword*).
 - Attachments, upgrades, status cards, counters, and non-damage tokens on a villain carry over to the new stage.
 - If the villain was defeated while activating, the villain resumes that activation using the new villain stage.
- If the new stage of the villain has a different title from the previous stage:
 - The new stage of the villain **not** is considered the same character as the defeated stage for purposes of card abilities.
 - Attachments, upgrades, status cards, counters, and non-damage tokens do **not** carry over to the new stage.
 - If the villain was defeated while activating, the activation ends without resolving.

See also: All-Purpose Counter, Attachment, Damage, Defeat, Excess Damage, Hit Points, Status Cards, Villain

VILLAIN PHASE

The steps of the villain phase are:

1. **Place Threat.** Place the amount of threat indicated in the main scheme's acceleration field onto that scheme. If any acceleration icons or tokens are active, additional threat equal to the number of such icons and tokens is also placed at this time.
2. **Enemies Activate.** In player order, each player resolves the following:
 - a. The villain activates against the player.
 - b. Each minion engaged with the player activates against them, in the order of that player's choice.
3. **Deal Encounter Cards.** Deal one encounter card to each player. Deal one additional card for each hazard icon on a card in play. These additional cards are dealt in player order.

4. **Reveal Encounter Cards.** The first player reveals each of their encounter cards, one card at a time in the order in which they were dealt, resolving each card based on its card type. Each player repeats this process in player order, until no dealt encounter cards remain.

5. **Pass First Player Token.** Pass the first player token to the next clockwise player.

6. **End of Villain Phase and Round.**

- a. Any effects that last "until the end of the [villain] phase" or "until the end of the round" end.
- b. Resolve any "when/after the [villain] phase ends" or "when/after the round ends" effects.

See also: Acceleration Icon, Activation, Attack (Enemy Activation), Deal, Engage, Find, Hazard Icon, In Player Order, Main Scheme, Minion, Player, Reveal, Scheme (Enemy Activation), Threat, Villain

VILLAIN'S PLAY AREA

The villain's play area (*also sometimes referred to as the "villain's game area"*) is the area of play where the villain deck, the main scheme deck, the encounter deck, the encounter discard pile, and the villain's hit point dial are located.

- Environment cards and side scheme cards are placed in the villain's play area when they enter play.
- Attachment cards attached to cards in the villain's play area are in the villain's play area. Attachment cards attached to cards in a player's play area are not in the villain's play area.
- Minion cards engaged with a player are in that player's play area and not in the villain's play area.
- Obligation cards given to a player are in that player's play area and not in the villain's play area.

See also: Attachment, Discard Pile, Encounter Deck, Environment, In Play and Out of Play, Main Scheme, Minion, Obligation, Villain

VILLAINOUS

When a **character** with the villainous keyword **uses a basic power**, give it a facedown boost card from the top of the encounter deck. When **resolving that basic power**, turn the boost card faceup, resolve any boost ability on that card, and apply its boost icons to the **character's** stats for this **use**. Discard the boost card after it is resolved.

- The villainous keyword is equivalent to the following triggered ability: **"Forced Interrupt: When this character uses a basic power, give it a boost card."**
- If a boost ability on a boost card dealt to a **character** refers to "the villain," that ability still applies to the villain (even *if another type of character is resolving it*).

See also: Activation, Attack (Enemy Activation), Boost, Discard, Keywords, Minion, Reminder Text, Scheme (Enemy Activation)

VULNERABLE

When a character with vulnerable becomes confused or stunned, that character is immediately discarded (*without being defeated*).

- The **vulnerable** keyword is equivalent to the following triggered ability: **"Forced Interrupt: When this character becomes confused or stunned, discard it."**
- If a character with the vulnerable keyword would simultaneously take enough damage to defeat it and become either confused or stunned, it is discarded before the damage is applied and is not considered defeated.
- If a character has both the steady and vulnerable keywords, the vulnerable keyword does not take effect until that character has two confused or two stunned status cards.

See also: Confuse, Steady, Stun

WHEN COMPLETED ABILITIES

A when completed ability is a type of triggered ability, indicated by the bold **"When Completed"** timing trigger.

When a main scheme is complete, all **"When Completed"** abilities on the card resolve.

- The **"When Completed"** timing trigger is equivalent to the following trigger: **"Forced Interrupt: When this scheme is completed..."**

See also: Main Scheme

WHEN DEFEATED ABILITIES

A when defeated ability is a type of triggered ability, indicated by the bold **"When Defeated"** timing trigger.

- The **"When Defeated"** timing trigger is equivalent to the following trigger: **"Forced Interrupt: When this card is defeated..."**
- When a villain stage, side scheme, main scheme stage, ally, or minion is defeated, all **"When Defeated"** abilities on the card resolve.
 - A defeated card leaves play after its **"When Defeated"** ability is resolved, if any.

See also: Ally, Defeat, Main Scheme, Minion, Side Scheme, Triggered Ability, Villain

WHEN REVEALED ABILITIES

A when revealed ability is a type of triggered ability, indicated by the bold **"When Revealed"** timing trigger.

When a player reveals a card from the encounter deck, a new scheme stage, or a new villain stage, all **"When Revealed"** abilities on the card resolve.

- If an encounter card with a **"When Revealed"** ability enters play during setup, resolve that ability during the "Resolve Scenario Setup and When Revealed Abilities" step.

- If an encounter card with a **"When Revealed"** ability is put into play without being revealed, the **"When Revealed"** ability does not trigger.
- **"When Revealed"** abilities on villain and main scheme cards cannot be canceled.

See also: Choose (Game Element), Encounter Card, Main Scheme, Triggered Ability, Villain, Appendix II: Setup

WILD RESOURCE (★)

A wild resource (★) is one of the four types of resources.

- Wild resources can be spent to pay the resource cost of cards and abilities. When a player generates a wild resource (★), they may specify which resource type (*energy, mental, physical, or wild*) it is being used as.
 - When a card that generates a wild resource has its resources doubled, each of its wild resources can be declared a different type.
- Some card abilities specifically require wild resources to be spent in order to resolve their effects.
- When resources are not being generated for a cost, a wild resource does not have any characteristic other than "wild resource." In such contexts, wild resources cannot be interpreted as any of the other resource types.

See also: Ability, Cost, Energy Resource, Icons, Mental Resource, Physical Resource, Resource

WINNING THE GAME

If the final villain stage is defeated, the players win the game. If the final stage of the main scheme deck is completed, the villain wins the game.

- Some scenarios have alternate win or loss conditions. If these conditions are met, the players win or lose accordingly.
 - Alternate win or loss conditions cannot be blanked or canceled.

"WOULD"

The word "would" is used to define the triggering condition of some interrupt abilities, and establishes a higher timing priority for those abilities than interrupts to the same triggering condition without the word "would."

- If an interrupt to a triggering condition that would occur changes the nature of that which is about to occur (*such as through a replacement effect*), no further interrupts to the original trigger may be used since the resolution of that trigger is no longer valid.

For example, an interrupt that states "when a character would be defeated" triggers before an interrupt that states "when a character is defeated."

See also: Interrupt, Replacement Effect, Triggered Ability

"X" (VALUE)

See: Non-Numerical Variable

YOU, YOUR

While resolving card abilities, if the word "you" **can** be resolved as referring to the player's identity, it must be resolved as such. This includes but is not limited to:

- If a sentence uses "you" and/or "your" multiple times, all instances in that sentence refer to the same identity or player.
- If a card deals damage to "you," or "you" take damage, the player resolving that damage applies it to the hit point dial of their identity.
- If a card ability deals indirect damage to "you," or "you" take indirect damage, the player resolving that damage can assign that damage to characters in play under their control.
- If a card ability exhausts "you," the player resolving that card ability exhausts their identity.
- If a card ability places a status card on "you" (such as "you are stunned"), the player resolving that card ability places that status card on their identity.
- If a card ability triggers from a game function that "you" perform (such as "after you attack and defeat an enemy"), the player resolving that card ability must resolve that card ability as if the identity they control performed that game function, if able. (For example, if an ability triggers "after you attack and defeat a minion," it triggers after the controlling player's identity attacks and defeats a minion but not when an ally under that player's control attacks and defeats a minion.)
- **Exception:** For abilities that trigger "after [enemy] attacks you," "you" refers to the attacked player, even if that player defended with an ally.

While resolving card abilities, if the word "you" **cannot** be resolved as referring to the player's identity, it must be resolved as referring to the player. This includes but is not limited to:

- If a game step or card ability discards cards from "your" hand, the player resolving that game step or card ability discards the cards from their hand.
- If a card ability searches "your" deck, the player resolving that ability searches for cards in their deck.
- If a game step or card ability performs a game function against a non-identity card "you" control (such as exhausting, discarding, setting aside, etc.), the player resolving that game step or card ability performs that game function against the card in their play area.

- If a card ability triggers from a game function that "you" perform and cannot be interpreted in such a way that would refer to the resolving player's identity (such as "after you discard cards from your hand"), the player resolving that card ability must personally resolve and perform the game function(s) of that ability.

Some player cards are considered to be an extension of a player's identity. When an action and/or ability is resolved on a card type that is an extension of an identity, that action and/or ability is considered to be performed by that identity.

Cards that are considered to be an extension of a player's identity are:

- **Events** — Attacks, thwarts, defenses, action abilities, and triggered abilities that resolve from a player playing an event are also considered to be performed by that player's identity.
- **Resources** — Attacks, thwarts, defenses, and triggered abilities that resolve from a player spending a resource card are also considered to be performed by that player's identity.
- **Upgrades** — Unless attached to a different friendly character, upgrade cards are considered to be an extension of the controlling player's identity. Attacks, thwarts, defenses, action abilities, and triggered abilities that resolve on such upgrades are also considered to be resolved by that player's identity.

Cards that are **not** considered to be an extension of a player's identity are:

- **Allies** — Attacks, thwarts, defenses, action abilities, and triggered abilities that resolve from allies in play under a player's control are **not** considered to be performed by that player's identity.
- **Encounter cards** — Triggered abilities that resolve from encounter cards are **not** considered to be performed by that player's identity, whether those abilities are optional or forced.
- **Player Side Schemes** — Triggered abilities that resolve from player side schemes in play under a player's control are **not** considered to be performed by that player's identity.
- **Supports** — Attacks, thwarts, defenses, action abilities, and triggered abilities that resolve from supports in play under a player's control are **not** considered to be performed by that player's identity.

See also: Ability, Ally, Event, Identity, Player, Player Card, Player Deck, Player's Play Area, Resource, Support, Upgrade

APPENDIX I: DECK CUSTOMIZATION

PLAYER DECKS

The deck customization rules for player decks are:

- A player must choose exactly one identity card.
- A player's deck consists of a minimum of 40 cards and a maximum of 50 cards. The identity card and any cards with the permanent keyword are not counted as part of this number.
- A player's deck must include each of the identity-specific cards associated with their chosen identity card. The exact quantity of each card included in that identity set must be included in the deck.
 - If a player's deck includes an identity-specific card that is considered to "match" (according to the rules for uniqueness; see *Unique Icon*) an identity chosen by another player during setup, that player may replace the matching card in their deck with a card with the Team-Up keyword that names both their own identity and the other player's identity.
- A player may choose exactly one aspect (*Justice, Aggression, Protection, or Leadership*) to use for customization. The remainder of their deck is then customized with cards that belong to that aspect and/or basic cards.
- No more than three copies (*by title*) of each non-unique card may be included in the deck.
- A player deck cannot include multiple cards that are considered to "match" under the rules for uniqueness (see *Unique Icon*). The identity is included in this evaluation.
- Any "deckbuilding requirements" on the player's identity card must be followed.

ENCOUNTER DECKS

Each scenario comes with a recommended list of card sets that form the default encounter deck for that scenario. (For the core set scenarios, these lists are on page 23 of the *Learn to Play*.) This recommended list can be modified in a few different ways:

- Expert mode is an option that can be used to increase the difficulty of a scenario. Expert mode uses a different combination of villain stages and adds the expert encounter set to the encounter deck.
- Most scenarios (*including all of the scenarios in the core set*) include a modular encounter set within their recommended list. To customize a scenario for a different experience, remove the modular encounter set from the list, and add any other modular encounter set as desired.
- It is possible to add multiple modular sets to a scenario, but this will dilute the encounter deck if too many are added.
- To add an additional element of uncertainty to a scenario, the modular set may be chosen from a group of facedown sets, and shuffled directly into the encounter deck without looking at the cards.

APPENDIX II: SETUP

To set up a game, perform the following steps in order:

1. **Select Identities.** Each player selects one identity, placing their alter-ego side face up.
2. **Set Hit Points.** Each player sets their hit point dial equal to the starting hit points of their character, found at the bottom of their identity card.
3. **Select First Player.** As a group, the players select a first player and place the first player token in front of that player.
4. **Set Aside Obligations.** For each identity being played, set aside their obligation card.
5. **Set Aside Nemesis Sets.** For each identity being played, set aside their nemesis and the encounter cards of that nemesis.
6. **Shuffle Player Decks.** Each player shuffles their player deck.
7. **Collect Tokens and Status Cards.** Collect a pool of damage tokens, threat tokens, acceleration tokens, and all-purpose counters within reach of each player. Place stacks of stunned, confused, and tough status cards near this pool.
8. **Select Scenario.** Select a scenario and put its villain deck and main scheme deck into play near the center of the play area.
9. **Set the Villain's Hit Points.** Set the villain's hit point dial to the value indicated by the villain card.
10. **Create the Encounter Deck.** Shuffle the encounter sets listed on side 1A of the main scheme card with the obligation cards set aside during setup step four to create the encounter deck.
11. **Put Setup Cards Into Play.** Search each deck and the set aside area for any cards with the setup keyword and put them into play.
12. **Resolve Scenario Setup and When Revealed Abilities.**
 - a. Resolve any "Setup" abilities on main scheme card 1A.
 - b. Flip the main scheme card to side 1B and resolve any "When Revealed" abilities on that side.
 - c. Resolve any "Setup" and "When Revealed" abilities on the villain.
13. **Campaign Setup.** If playing in campaign mode, resolve the Setup campaign instructions listed for the scenario in its associated rulebook.
14. **Draw Cards.** Each player draws cards from their deck until they have cards equal in number to their hand size (*including modifiers*), as listed near the bottom of their identity card.
15. **Resolve Mulligans.** Each player may discard any number of cards from hand, and then draw up to their starting hand size. (*Do not shuffle these discarded cards back into their decks at this time.*)

16. **Resolve Player Setup Abilities.** Resolve any "Setup" abilities on player cards in play.

The game is now ready to begin.

APPENDIX III: CARD ANATOMY

This section presents an anatomy of each card type. Player cards are detailed first, followed by encounter cards.

PLAYER CARD ANATOMY KEY

1. **Title.** The name of this card.
2. **Card Type.** Indicates how this card behaves or may be used in the game.
3. **Traits.** Flavorful attributes that may be referenced by card abilities.
4. **Ability.** This card's specialized means of interacting with the game.
5. **Cost.** The resource cost to play this card.
6. **Hit Points.** A value that represents this card's durability.
7. **Resources.** The resources this card generates when it is discarded from hand.
8. **Deckbuilding Classification.** Indicates if this card is exclusive to a hero, belongs to an aspect, or is a basic card.
9. **THW.** How effective this character is at opposing enemy schemes.
10. **ATK.** How effective this character is when it attacks.
11. **DEF.** How effective this character is when it defends.
12. **REC.** How effective this alter-ego is at recovering damage.
13. **Consequential Damage.** The amount of damage this ally takes after it is used for this power.
14. **Hand Size.** The number of cards this card's controller resets their hand to each round.
15. **Collector Information.** Indicates this card's product of origin (indicated by its set icon) and card number within that product.
16. **Unique Icon.** Indicates that the card is unique.
17. **Subtitle.** Indicates an alternate identity an ally might possess.

16 IDENTITY (HERO)

IDENTITY (ALTER-EGO)

SUPPORT

EVENT

RESOURCE

ENCOUNTER CARD ANATOMY KEY

- Title.** The name of this card.
- Card Type.** Indicates how this card behaves or may be used in the game.
- Traits.** Flavorful attributes that may be referenced by card abilities.
- Ability.** This card's specialized means of interacting with the game.
- Hit Points.** A value that represents this card's durability.
- SCH.** How effective this enemy is when it schemes.
- ATK.** How effective this enemy is when it attacks.
- Boost Icons.** Indicates how effective this card is when it is discarded as an attack boost or scheme boost.
- Starting Threat.** The amount of threat placed on this scheme when it enters play.
- Acceleration.** The speed at which this scheme advances each round.
- Target Threat.** The amount of threat required on this scheme to advance to the next stage of this scheme deck.
- Stage Number.** The stage of this villain or scheme within the scenario.
- Encounter Set Name.** Indicates which encounter set this card belongs to.
- Encounter Set Information.** Indicates the number of cards within an encounter set and this card's place within that set.
- Collector Information.** Indicates this card's product of origin (indicated by its set icon) and card number within that product.

APPENDIX IV: FAQ

GENERAL QUESTIONS

Q: If my hero has a tough status card and I am dealt damage, can I use an interrupt ability to reduce or prevent that damage in order to keep the tough status card?

A: No. Status cards have priority over all triggered abilities, like interrupts, so the tough status card must be discarded to prevent all of the damage before any other abilities could trigger.

A hero **can** keep their tough status card if:

1. A constant effect reduces the damage the hero takes to zero. This is because constant effects have priority over status cards.
2. The hero makes a basic defense and their DEF reduces the damage dealt by the attacking enemy's ATK to zero. This is because a basic defense reduces the amount of damage **dealt** by the attacker, rather than the amount of damage **taken** by the defender.

Q: If my ally with a tough status card takes overkill damage, does the excess damage get dealt to my identity?

A: No. Only excess damage "taken" by the ally gets dealt to the identity by the overkill keyword, and a tough status card prevents the character from "taking" any damage.

CORE SET

Q: In the Core Set, there are 19 Aggression, Justice, and Protection aspect cards, but only 18 Leadership aspect cards. Is this correct?

A: Yes. The Leadership aspect received 1 fewer card than the other aspects because it has more unique cards to choose from.

SPIDER-MAN (#1A)

Q: When does the villain "initiate" an attack against Spider-Man?

A: An attack is "initiated" the moment the game determines an attack will be made against a character. This includes attacks made from game steps (such as step 2 of the villain phase) and card abilities (such as an attack initiated by the "Assault" treachery). Spider Man's ability resolves before any of the steps of the process detailed in the "Attack (Enemy Activation)" section are performed.

WEBBED UP (#9)

Q: How many attacks does Webbed Up prevent?

A: Two attacks in total. Webbed Up prevents the attached enemy's very next attack by replacing that attack with the placement of a stun status card. Then, the stun status card will prevent that enemy's following attack.

Q: Does Webbed Up prevent Spider-Sense from triggering?

A: Yes. Webbed Up's ability is a replacement effect (indicated by the word "instead"), meaning the attack never initiates.

JENNIFER WALTERS (#19B)

Q: Can Jennifer Walters remove threat from a side scheme as it enters play?

A: No. Side schemes enter play with threat already on them, meaning threat is not "placed" at this point.

Q: If threat is placed on a scheme during game setup, does Jennifer Walters's ability trigger?

A: No. Abilities that do not have the "Setup" timing trigger cannot resolve during game setup.

LEGAL PRACTICE (#23)

Q: Can Legal Practice remove threat from multiple schemes simultaneously?

A: No. All of the threat removed by Legal Practice must be removed from a single scheme.

FOCUSED RAGE (#27)

Q: If She-Hulk has a tough status card, can she use Focused Rage to draw a card?

A: No. The tough status card prevents She-Hulk from "tak[ing] 1 damage," so the ability's cost cannot be paid. Because you cannot partially pay a cost, you cannot attempt to pay the cost of Focused Rage's ability just to remove She-Hulk's tough status card.

SUPERHUMAN STRENGTH (#28)

Q: If She-Hulk attacks an enemy that cannot be stunned because it is already stunned or is stalwart, does Superhuman Strength's Forced Interrupt resolve?

A: No. Because the effect of Superhuman Strength's Forced Interrupt cannot affect the attacked enemy, the effect cannot resolve and Superhuman Strength is not discarded.

REPULSOR BLAST (#31)

Q: Can Repulsor Blast's first point of damage remove a tough status card from an enemy, then its additional damage deal damage to that enemy?

A: No. The additional damage that Repulsor Blast deals is a simultaneous modification of its first point of damage. For instance, if a player were to discard 2 energy resources due to Repulsor Blast, they would deal a total of 5 damage to an enemy all at once, as the additional 4 damage dealt by the discard effect happens at the same time as the first point of damage.

PEPPER POTTS (#33)

Q: Does Pepper Potts generate 2 resources if a card with 2 printed resources (such as Energy, Genius, or Strength) is on top of the discard pile?

A: Yes. Pepper Potts generates a number of resources that are equal in quantity and type to the resources on the top card of the discard pile.

Q: Will Pepper Potts generate 2 resources if a “The Power of [Aspect]” resource card (such as The Power of Aggression) is on top of the discard pile?

A: No. Though the resources that Pepper Potts generates are equal in quantity and type to the resources of the top card of the discard pile, Pepper Potts is the card that is generating these resources. This means that a The Power of [Aspect] card never generates resources itself, having no opportunity to generate additional resources for a card of its specified aspect.

Q: Can Pepper Potts generate the resources of a card that is currently being spent?

A: No. Resources are generated simultaneously, meaning the spent card will not be on top of the discard pile at the time Pepper Potts uses her ability.

ROCKET BOOTS (#39)

Q: If Iron Man has 1 hit point remaining and his Rocket Boots upgrade is discarded from play, is Iron Man defeated?

A: Yes. If an ability that modifies hit points expires or otherwise becomes inactive, the modified hit points revert to the value they would be without the modifier. In this case, Iron Man’s hit points would revert to 0, instantly defeating him.

BLACK PANTHER (#40A)

Q: If an enemy initiates an attack against Black Panther but another hero or an ally defends against that attack, will Black Panther’s retaliate ability trigger?

A: No. Black Panther himself must be attacked for retaliate to trigger.

Q: If Black Panther defends against an attack, will his retaliate ability trigger?

A: Yes. As long as Black Panther himself is attacked, retaliate will trigger.

ANCESTRAL KNOWLEDGE (#42)

Q: Can Ancestral Knowledge shuffle different versions of Wakanda Forever into Black Panther’s deck?

A: No. Cards with the same title are considered to be the same card for the purpose of card abilities.

VIBRANIUM SUIT (#49)

Q: Does moving damage discard tough status cards from the target enemy?

A: Yes. If damage is moved to a character, the moved damage is considered to be dealt to that character.

TIGRA/GREER GRANT NELSON (#51)

Q: Does Tigra’s “Response” ability trigger before or after she takes consequential damage?

A: Before. The “After Tigra attacks and defeats a minion...” condition is checked immediately after Tigra defeats a minion with her attack power, but before consequential damage is applied to her.

MAKE THE CALL (#71)

Q: When playing Make the Call, do “The Power of [Aspect]” resource cards (such as The Power of Leadership) generate 1 resource or 2 resources?

A: Make the Call’s text states “Action: Pay the printed cost of an ally in any player’s discard pile...”, meaning the player is paying the cost of the ally itself. If that ally’s aspect matches that of The Power of [Aspect] card, then The Power of [Aspect] card will generate 2 resources. However, if that ally’s aspect does not match, The Power of [Aspect] card will only generate 1 resource.

WHIRLWIND (#130)

Q: How is Whirlwind’s attack against each hero resolved?

A: Whirlwind makes a separate attack against each hero and these attacks are resolved simultaneously. Each player resolves each step of the attack simultaneously. Each attack may have a defender declared, and each defender defends for a single player.

ULTRON II (#135)

Q: If Ultron’s attack is defended by a player other than the one who was attacked, does Ultron get +1 ATK for each DRONE minion engaged with the defending player or the player Ultron initiated the attack against?

A: Ultron’s ability has already resolved before defenders are declared, creating a lasting effect that refers to the original target of the attack. The bonus to Ultron’s ATK is based on the number of DRONE minions engaged with the player Ultron initiated the attack against. If the number of DRONE minions engaged with that player changes, the bonus changes as well.

ASSAULT (#197)

Q: If Assault causes the villain to attack me and there is only one card left in the encounter deck, is Assault in the encounter discard pile when the discard pile is shuffled into the encounter deck after the villain is given a boost card?

A: No. Assault is not discarded until it finishes resolving, which happens when the villain’s attack has been resolved.

GREEN GOBLIN SCENARIO PACK

NORMAN OSBORN (#1A)

Q: Will a stun status card prevent Norman Osborn’s attack activation?

A: Yes. Because status cards take priority over all other abilities, a stun status card will prevent Norman Osborn’s activation.

GREEN GOBLIN (#1B)

Q: While Green Goblin is attacking, if the last madness counter is removed from the State of Madness environment through a "Boost" ability, what happens?

A: Green Goblin immediately flips to Norman Osborn form. Boost icons from the boost card are then added to Norman Osborn's ATK value of ★, which is treated as a value of 0. Norman Osborn then deals damage from the attack equal to his modified ATK value (base of 0 ATK, plus the number of boost icons on the boost card). In this specific situation, Norman Osborn's "Forced Interrupt" does not trigger, as the attack is already past the point of "When Norman Osborn would attack..." by the time he changes to his Norman Osborn form.

I SEE YOU (#30)

Q: If I'm in alter-ego form and I reveal "I See You", does Green Goblin attack me?

A: Yes. Because the "When Revealed" ability on I See You does not specify hero form or alter-ego form, Green Goblin will attack the player no matter their form.

CAPTAIN AMERICA HERO PACK

STEVE ROGERS (#1B)

Q: If Captain America's Shield is put into play as a Drone minion during game setup for Ultron, can I retrieve it with Steve Rogers's Setup ability?

A: No. The Setup ability specifically searches the player's deck and discard pile. If Captain America's Shield is not in either game area, the ability fails to find it.

Q: If an ally is played while I'm Captain America, then I change form to Steve Rogers, will Steve Rogers's "Living Legend" ability still apply to the next ally played?

A: No. Living Legend only applies to the very first ally played each round.

MS. MARVEL HERO PACK

EMBIGGEN (#10)

Q: If an **ATTACK** event deals multiple sources of damage (such as the Aggression event, Melee), how does Embiggen work?

A: Embiggen increases all instances of damage that an **ATTACK** event deals by 2. For example, if an event were to deal 3 damage, then deal 3 damage again, that event would now deal 5 damage, then 5 damage again.

SHRINK (#11)

Q: When playing Emergency, can I exhaust Shrink to remove 2 threat from a scheme?

A: No. Shrink increases each instance of threat removed by a thwart event. Because Emergency only prevents threat and does not remove any, Shrink will have no effect.

NOVA/SAM ALEXANDER (#12)

Q: If Nova's ability defeats an attacking enemy, does that enemy's attack still deal damage?

A: No. Although the attack sequence has initiated, damage from that attack has not yet been calculated. If Nova defeats the enemy during this step, the rest of the attack sequence fails to resolve.

MELEE (#30)

Q: Can Melee deal damage to the same enemy twice?

A: No. When Melee deals damage a second time, that damage must be dealt to an enemy that is different from the first. Note that different stages of the villain are considered to be the same enemy.

Q: If I'm engaged with a minion with guard, can I target that minion and the villain, as long as the minion would be destroyed by the damage done by Melee?

A: Yes, as long as you defeat the minion with the first sentence of the ability on Melee, you may deal damage to the villain with the second sentence of the ability.

THOR HERO PACK

JARNBJORN (#19)

Q: Can I trigger Jarnbjorn after I play an **ATTACK** event?

A: Yes. A hero is considered to make an attack both through their basic attack power and actions with the (attack) label.

Q: If an **ATTACK** event damages multiple enemies, can Jarnbjorn be triggered for each one?

A: Yes. Each enemy that is dealt damage by an **ATTACK** event is considered to have been attacked.

BLACK WIDOW HERO PACK

DANCE OF DEATH (#4)

Q: Dance of Death does not contain the (attack) label. Are each of its damage-dealing effects actually considered attacks or is this a mistake?

A: The first sentence of Dance of Death's ability defines each damage-dealing effect from Dance of Death as an individual attack. Resolve each as a normal attack, one at a time.

Q: If Black Widow is stunned, will each attack from Dance of Death be prevented, or just the first attack?

A: Because Dance of Death creates three separate attacks, a stun status card on Black Widow will only prevent the first attack. The second and third attack can be performed as normal.

ATTACROBATICS (#6)

Q: Can Attacrobatics cancel 0 boost icons?

A: No. Attacrobatics cannot be used to cancel the boost icons on a card that has none as there is no valid target for the ability.

WIDOW'S BITE (#10)

Q: If I have Widow's Bite in play and I reveal a minion with quickstrike, which resolves first?

A: Quickstrike triggers when a minion engages a player and minions enter play engaged with the player who revealed them, thus Quickstrike and the "Response" on Widow's Bite have the same timing trigger. Keywords have timing priority over "Response" abilities, so Quickstrike resolves first.

DOCTOR STRANGE HERO PACK

THE NIGHT NURSE (#19)

Q: If the only status card on a hero is a tough status card, is it discarded if I use The Night Nurse to heal that hero?

A: Yes. The Night Nurse's ability discards 1 status card from that hero, no matter the type.

UNFLAPPABLE (#20)

Q: If while defending against an enemy attack, my identity takes damage from a "Boost" ability but takes no damage from the attacking enemy otherwise, can I still trigger Unflappable to draw a card?

A: Yes. The cost of the ability on Unflappable only requires that the defending identity take no damage during step 4 of the enemy attack.

COUNTERSPELL (#30)

Q: Counterspell says "Attach to your hero." If I draw Counterspell while in alter-ego form, what happens?

A: Counterspell attempts to attach to your hero but cannot. Because it is unable to meet its condition, simply discard it. (Do not reveal a new encounter card in its place.)

IMAGES OF IKONN (#33)

Q: Can I resolve Images of Ikonn if the villain is already confused and there is no threat on a scheme?

A: Yes. As long as any part of the ability on Images of Ikonn has a valid target, then it will do as many effects as it is able. While its first effect may not have a valid target if the villain is already confused and there is no threat on a scheme, its second effect always has a valid target (the card itself).

HULK HERO PACK

CRUSHING BLOW (#2)

Q: If Crushing Blow's resource cost is reduced to 0, can it be played without spend resources?

A: Yes. The "You can only spend resources to pay for this card" ability on Crushing Blow only applies when actual resources are being spent to pay for its resource cost. If its resource cost is reduced to 0, no resources are required to pay for Crushing Blow, so no resources must be spent.

UNSTOPPABLE FORCE (#6)

Q: If Unstoppable Force's resource cost is reduced to 0, will I draw 1 card from its second ability?

A: No. Because no resources were spent to pay for Unstoppable Force's resource cost, its "If you paid for this ability using only resources..." condition was not fulfilled, so that effect will not resolve.

CLASH OF TITANS (#28)

Q: If my highest-ATK character is an ally, and the attack from Clash of Titans is undefended, which takes the damage: my identity or the ally that was attacked?

A: The ally will take all damage from the undefended attack.

RISE OF RED SKULL EXPANSION

HAWKEYE'S QUIVER (#3)

Q: After using Hawkeye's Quiver to search the top 5 cards of my deck, what should I do with those cards?

A: Shuffle those cards back into Hawkeye's deck. After a search ability is completed—no matter if that ability searches the whole deck or only a portion of the deck—the entire deck is shuffled.

MARKED FOR DEATH (#28)

Q: When Marked for Death is revealed, if a copy of Mockingbird is already under a player's control who is not Clint Barton, what happens?

A: The Clint Barton player can tuck their copy of Mockingbird under this scheme even if there is another copy of Mockingbird in play because tucked cards are not considered to be in play.

JESSICA DREW (#31B)

Q: Does Jessica Drew's Double Agent ability require her deck to be built with two aspects?

A: Yes. An equal number of cards from two different aspects must be included in her deck.

FINESSE (#33)

Q: Can Finesse generate a resource to pay for an aspect card's ability (such as Jarnbjorn)?

A: Yes. As long as the resource generated by Finesse is spent on an aspect card (its resource cost or a cost within that aspect card's ability), Finesse can be used.

THE ONCE AND FUTURE KANG SCENARIO PACK

Q: While the players are split into separate game areas, whose game area are environment cards considered to be in?

A: Environment cards are considered to be in all players' game areas.

DEPOWERED (#20)

Q: If Depowered is in Doctor Strange's play area, can the Doctor Strange player still use the INVOCATION deck?

A: Yes. The abilities on cards in the INVOCATION deck are merely resolved, not played.

WASP HERO PACK

WASP (#1C)

Q: While Wasp is in *GIANT* hero form, how does her first ability interact the patrol keyword and the crisis icon?

A: Wasp's first ability allows her basic thwart to simultaneously remove threat from each scheme that Wasp chooses. Wasp cannot choose the main scheme as a target while she is engaged with a minion with the patrol keyword or there is a card with a crisis icon in play. Due to the simultaneous nature of this ability, this applies even if the card with the patrol keyword or crisis icon is removed from play during her basic thwart's resolution.

Q: While Wasp is in *GIANT* hero form, how does her second ability interact with the guard keyword?

A: Wasp's second ability allows her basic attack to simultaneously damage each enemy that Wasp chooses. Wasp cannot choose the villain as a target while she is engaged with a minion with the guard keyword. Due to the simultaneous nature of this ability, this applies even if the card with the guard keyword is removed from play during her basic attack's resolution.

Q: While Wasp is in *GIANT* hero form, how does her second ability interact with multiple enemies who have the retaliate keyword?

A: Wasp is considered to attack each target affected by her divided basic attack. If Wasp's basic attack is divided among multiple enemies with the retaliate keyword, each instance of retaliate will damage Wasp (*in the order of her choice*).

QUICKSILVER HERO PACK

QUICKSILVER (#1A)

Q: If Quicksilver attempts to make a basic attack or basic thwart while stunned or confused, can his *Super Speed* ability trigger?

A: No. Stunned and confused status cards replace the usage of the basic power with their removal. If Quicksilver makes a basic attack while stunned or a basic thwart while confused, he is not considered to have used a basic power and the condition of his *Super Speed* ability is not met.

SCARLET WITCH HERO PACK

HEX BOLT (#4)

Q: For the second sentence of Hex Bolt, do the bulleted abilities resolve each time a card is discarded from the encounter deck, or do the bulleted abilities resolve after all 3 cards have been discarded?

A: As Hex Bolt does not contain an alteration effect, resolve the first sentence of Hex Bolt entirely, without interruption. Then, determine and resolve the appropriate bulleted abilities based off of what was discarded.

SLIPPING SANITY (#23)

Q: Is it intentional that Scarlet Witch has two obligation cards?

A: Yes. Scarlet Witch's powers are chaotic, often working in her favor, though also sometimes working against her. While she has many cards within her personal set that represent the positive facets of her powers, having multiple obligations represents the negative facets.

GALAXY'S MOST WANTED EXPANSION

MODULAR ENCOUNTER SETS

Q: In the Galaxy's Most Wanted Expansion, which sets are considered modular encounter sets?

A: If an encounter set is not scenario-specific (*containing the name of that scenario in its encounter set name area*) or campaign-specific (*containing the word "Campaign" in its encounter set name area*), then it is modular. The eight modular encounter sets in the Galaxy's Most Wanted Expansion are: Badoon Headhunter, Band of Badoon, Galactic Artifacts, Kree Militants, Menagerie Medley, Power Stone, Space Pirates, and Ship Command.

CAMPAIGN MODE

Q: Do I have to play in expert mode for each scenario in an expert campaign?

A: No. Increasing a campaign's difficulty merely adds additional cards or setup instructions to each scenario in that campaign. It does not lock players into any other mode of play. For each scenario within a campaign, players are encouraged to choose the other modes of play that are right for them.

Q: If I play one scenario in expert mode, do I have to play the next scenario using the same mode?

A: No. The players may, for instance, play one scenario of the campaign using a combination of standard, heroic, and skirmish modes, then play the next scenario of the campaign using simply expert mode. Players can mix and match modes as they see fit between each scenario in a campaign.

ROCKET RACCOON (#29A)

Q: If Rocket Raccoon uses his "*Tinkering*" ability but the *TECH* upgrade is not placed into a discard pile (such as due to Collector's ability), will Rocket Raccoon draw 2 cards?

A: Yes. Discarding is the act of attempting to place a card into a discard pile. Even if the *TECH* upgrade ends up in a different game area, the cost of Rocket Raccoon's "*Tinkering*" ability was still paid.

SALVAGE (#33)

Q: If the Hulk ally (Core Set #50) discards Salvage, what happens?

A: Hulk's ability checks all printed resources on Salvage simultaneously, then resolves the appropriate effect based on the result. Because this check and resolution is simultaneous, the player who controls Hulk chooses the order in which the effects resolve.

BATTERY PACK (#34)

Q: Can Battery Pack move a charge counter to a *TECH* card that does not use “charge counters”?

A: Yes. The card that an all-purpose counter is on defines the type of that counter, so Battery Pack can move a counter to any *TECH* card and that counter will take on the type defined by that card (if any).

POWER STONE (#149)

Q: If an identity who controls the Power Stone is defeated, what happens to the Power Stone?

A: If a player is eliminated from the game while a permanent attachment is in their play area, they resolve the “attach to” text of that attachment. In this case, the Power Stone would be attached to the villain.

Q: If a character with the Power Stone is dealt 3 or more damage but does not take 3 or more damage due to damage prevention, does the attacker get the Power Stone attached to them?

A: Yes. Damage prevention does not reduce the amount of damage dealt. Note that a hero making a basic defense reduces the amount of damage dealt by that hero’s DEF, so defending an attack can prevent the Power Stone from being taken.

STAR-LORD HERO PACK

STAR-LORD (#1A)

Q: If I play an ally that does not have the printed *GUARDIAN* trait while in hero form, can I trigger the response on Knowhere (#22)?

A: Yes. Star-Lord’s constant ability grants each ally his player controls the *GUARDIAN* trait. Constant abilities have priority over triggered abilities like Knowhere’s “Response” ability, so the newly-played ally will have the *GUARDIAN* trait before Knowhere triggers.

MISTER KNIFE (#26)

Q: When Mister Knife is revealed by Shadow of the Past, does Shadow of the Past gain surge if it was the first treachery revealed by the Star-Lord player that phase?

A: No. Mister Knife was not in play when Shadow of the Past was revealed, so his ability does not cause Shadow of the Past to gain surge.

DIVE BOMB (#28)

Q: Can I play Dive Bomb if I am engaged with a minion with the guard keyword? If so, how would it resolve?

A: Yes. Abilities are resolved one sentence at a time, so “[d]eal 7 damage to an enemy” would resolve first. If that damage defeated the guard minion, the second effect, “[d]eal 1 damage to each other enemy” would deal 1 damage to the villain. If the first sentence did not defeat the guard minion, the second sentence would deal 1 damage to each enemy other than the villain and the enemy dealt damage by the first sentence.

VENOM HERO PACK

GRASPING TENDRILS (#3)

Q: If I cancel an attack with Grasping Tendrils, is my hero considered to have defended that attack?

A: Yes, because Grasping Tendrils is labeled as a defense, your hero is considered to have defended the attack.

MAD TITAN'S SHADOW EXPANSION

SCENARIO #2 - TOWER DEFENSE

Q: When a minion schemes during this scenario, which main scheme is its threat placed on?

A: Threat from a minion scheming is placed on the main scheme with the “Focused Defense” attachment attached to it.

IN-BETWEENER (#42), LIVING TRIBUNAL (#48), ETERNITY (#54), THE GARDENER (#60)

Q: Where does a *COSMIC ENTITY* event go after it is resolved as a boost card?

A: That event is placed in the encounter deck discard pile.

NEBULA HERO PACK

OLD RIVALS (#31)

Q: If Old Rivals causes a Gamora ally or hero to attack, can her controller trigger abilities related to her attacking during this attack?

A: Yes. Gamora is considered to have attacked, so abilities triggered by her attacking can be resolved.

Q: If Old Rivals causes a Gamora ally to attack, does she take consequential damage?

A: Yes, allies always take consequential damage after they attack.

WAR MACHINE HERO PACK

GAUNTLET GUN (#5)

Q: Can Gauntlet Gun’s resource ability be triggered when paying a cost other than for a War Machine event in order to place 1 ammo counter on War Machine?

A: No, Gauntlet Gun’s resource ability can only be triggered when paying for a War Machine event.

SINISTER MOTIVES EXPANSION

SCENARIO #4 - THE SINISTER SIX

Q: If there is more than one villain in play, which villain takes the excess damage from attacks with overkill?

A: The villain with the active counter takes the overkill damage.

Q: What happens if a villain needs to activate and there are one or more villains in play but none of them have the active counter?

A: Place the active counter on the villain with the lowest activation order value and continue that activation.

SCENARIO #5 - VENOM GOBLIN

Q: What happens when one of the main schemes is completed?

A: When any of the main schemes has threat on it equal to or greater than its target threat value, flip that main scheme to its environment side and reveal that environment.

Q: When a player card effect places an acceleration token on "the main scheme," which scheme is that token placed on?

A: That token is placed on the main scheme with the glider counter.

Q: When a player card effect counts the number of acceleration tokens on "the main scheme," on which main scheme are the tokens counted?

A: The player using the effect chooses one main scheme on which to count the acceleration tokens.

ACROSS THE SPIDER-VERSE (#18)

Q: Can this ability be repeated more than once?

A: Yes, repeating the ability on this card includes the repeat effect itself. As long as a player who can spend 3 resources and exhaust a **WEB-WARRIOR** card can be chosen, the ability can be repeated.

IRONHEART HERO PACK

"GO FOR CHAMPIONS!" (#25)

Q: If I have played "Go for Champions!" this round, can I trigger an ability that requires taking damage as a cost?

A: No, if you cannot take damage, you cannot pay a cost that requires you to take damage.

SPIDER-HAM HERO PACK

WARRIOR OF THE GREAT WEB (#29)

Q: Can the SP//dr hero or ally have Warrior of the Great Web attached?

A: No. A character's title must contain the word "Spider" spelled exactly that way in order for Warrior of the Great Web to be attached.

SP//DR HERO PACK

SPIDER-MAN NOIR (#15)

Q: If a treachery's "When Revealed" ability is canceled, can Spider-Man Noir attach that treachery to himself?

A: In order for Spider-Man Noir's response to trigger, some part of the treachery card must be resolved. If the treachery card has a keyword on it that is resolved when the card is revealed, like surge or incite X, Spider-Man Noir can trigger his response to attach that card to himself. If no part of the treachery card resolves, he cannot attach it.

MUTANT GENESIS EXPANSION

POWERFUL PUNCH (#14)

Q: If Shadowcat plays Powerful Punch on the villain, when does she flip her mass form?

A: When the villain initiates an attack, Shadowcat plays Powerful Punch. She deals 4 damage to the villain. As soon as she finishes resolving the attack-labeled effect, she is considered to have attacked and can flip her mass form as soon as the damage is dealt (she must do so if she is in Phased mass form).

The villain then continues its attack, and Shadowcat is now considered defending that attack. If she is in her Phased mass form, she will not take any damage from that attack because of the constant ability on her Phased upgrade card. After the villain deals damage from its attack (or attempts to do so), Shadowcat finishes defending and can flip her mass form again (which she must do if she is in Phased mass form).

MUTANT PROTECTORS (#17)

Q: How does the defense label on Mutant Protectors work since the card ability makes an ally the defender?

A: When a player plays Mutant Protectors, that player becomes the target of the enemy attack and the **X-MEN** ally put into play becomes the defender.

If the defending ally leaves play before damage is dealt for the attack, the player's hero becomes the defender and can trigger "after you defend" responses after the attack resolves. (*This is not a basic defense, and the villain's attack is not reduced by the hero's DEF.*)

WHITE QUEEN (#56)

Q: How does White Queen's constant ability work?

A: The phrase "you are confused" instructs you to place a confused status card on your identity. Because White Queen uses this phrase as a constant ability, she continuously places confused status cards on the engaged player's identity until that identity cannot have any more confused status cards (normally one, but can be more, such as when the identity has the steady keyword). If that identity attempts to thwart, they can do so and remove their confused status card(s), but will immediately be given more confused status cards. When White Queen leaves play, any confused status cards remain on the identity until that identity attempts to thwart in order to remove them.

OPERATION ZERO TOLERANCE (#104)

Q: If an ally is not discarded after being defeated by an enemy attack (for instance, it is returned to hand or shuffled into a player's deck), does it go under Operation Zero Tolerance?

A: Yes. Operation Zero Tolerance does not specify where to find the defeated ally when it resolves, so it is placed under Operation Zero Tolerance, regardless of where it ended up.

FABIAN CORTEZ (#159)

Q: If Fabian Cortez's "When Defeated" ability puts an **ACOLYTE** minion with the teamwork keyword into play while Fabian Cortez is the only other **ACOLYTE** minion in play, will the teamwork keyword on the other minion trigger?

A: No. Since putting the other minion into play is the last effect of Fabian Cortez's "When Defeated" ability, he is discarded immediately upon the other minion entering play. This means Fabian Cortez is no longer in play when the other minion's teamwork keyword tries to find an **ACOLYTE** minion in play.

CYCLOPS HERO PACK

RICOCHE BEAM (#9)

Q: If Cyclops chooses the same enemy with Exploit Weakness attached for both of Ricochet Beam's instances of damage, how much damage is dealt to that enemy?

A: Exploit Weakness increases each instance of damage Ricochet Beam deals to the enemy to which Exploit Weakness is attached by 1, so Ricochet Beam deals that enemy a total of 8 damage (4 damage + 4 damage).

MOJOMANIA SCENARIO PACK

DIAL M FOR MOJO (#35)

Q: If Dial M for Mojo is in play when Spiral flips, does her incite 1 keyword trigger?

A: Yes. Villains are encounter cards, so Dial M for Mojo gives incite 1 to Spiral. When Spiral flips, her new face is revealed, meaning her incite 1 resolves.

WILD WILD MOJO (#66)

Q: How is overkill damage affected by the "Forced Interrupt" on Wild Wild Mojo?

A: Wild Wild Mojo first increases the initial damage dealt to a minion or ally by 1, and then when the excess damage is applied to the villain or identity, Wild Wild Mojo increases it by another 1, meaning the total overkill damage dealt is increased by 2.

NEXT EVOLUTION EXPANSION

MALICE (#199)

Q: Is Malice still a minion while she is attached to an ally?

A: Yes. While Malice is attached to an ally:

- She retains the minion card type.
- She retains any damage on her.
- She can be attacked and targeted by card abilities (including attachments) like any minion, but cannot be defeated again, even if she gains hit points or heals damage.
- She is not considered engaged with a player and so cannot activate.
- She is discarded when the card to which she is attached leaves play.

X-23 HERO PACK

HONEY BADGER (#3)

Q: Can Honey Badger's "Response" be triggered if the damage defeats her?

A: No. By the time Honey Badger's "Response" would trigger, she has already left play, so it cannot be triggered.

DEADPOOL HERO PACK

CRISIS OF INFINITE DEADPOOLS (#37)

Q: Is Crisis of Infinite Deadpools included in the encounter deck if an ability allows a player to include one or more 'Pool aspect cards from outside of their chosen aspect in their deck?

A: No. Crisis of Infinite Deadpools is only included if at least one player in the game chooses the 'Pool aspect as (one of) their chosen aspect(s).

AGE OF APOCALYPSE EXPANSION

MAGIK (#30A)

Q: When Magik plays the top card of her deck, at what point is the next card in her deck turned faceup?

A: When playing the top card of her deck (which is the same process as playing a card from hand), Magik moves the card she is playing to the table in front of her during step 3 of the process outlined in the Initiating Abilities section of this rules reference. As soon as she does this, she turns the new top card of her deck faceup.

Q: Can Magik play the top card of her deck using an ability that says "play a card from your hand," such as Team-Building Exercise (Ant-Man #24)?

A: Yes. Any time Magik has an opportunity to play a card from her hand, she may choose to play the top card of her deck instead (once per phase).

Q: Can Magik resolve an ability that triggers "after you play [card] from your hand," such as Pixie (Storm #17), if she plays that card from the top of her deck?

A: Yes. When Magik plays a card from the top of her deck, that card is considered to have been played from her hand.

Q: Can Magik put the top card of her deck into play as if it was in her hand, such as with Mutant Protectors (Mutant Genesis #17)?

A: No. Putting a card into play is not the same as playing a card, and Magik's ability only allows her to play the top card of her deck, not put it into play.

AGENTS OF S.H.I.E.L.D. EXPANSION

MARIA HILL (#1B)

Q: Can I include just one or two **S.H.I.E.L.D.** supports from aspects other than my chosen aspect in my Maria Hill deck?

A: No, Maria Hill's ability is all or nothing. You must include the maximum number of copies of each of exactly three **S.H.I.E.L.D.** supports from aspects other than your chosen aspect, or else you cannot have any **S.H.I.E.L.D.** supports from other aspects in your deck.

STEALTH (#35)

Q: When Nick Fury's Stealth suit form changes the villain's activation to a scheme, what happens if that villain is confused?

A: The interrupt ability of Stealth causes the villain activation to reinitiate, this time as a scheme activation, so the the confused status will cancel that activation (and Nick Fury does not get to place any threat on his suit form upgrade).

BLACK PANTHER HERO PACK

THE ELEPHANT'S TRUNK (#7)

Q: Can I satisfy the cost of The Elephant's Trunk's action ability if I just exhaust The Elephant's Trunk itself?

A: Yes. The Elephant's Trunk is itself a **WAKANDA** support, so it satisfies the minimum of one **WAKANDA** ally or support needed to pay its ability's cost.

TARGET SPOTTER (#38)

Q: If I use Target Spotter on a minion revealed by another player, does that minion ever engage that other player?

A: No, Target Spotter interrupts the engagement of that minion and causes it to engage the player using Target Spotter instead.

FALCON HERO PACK

REDWING (#2)

Q: Can Redwing's ability be triggered if the top card of the encounter deck is visible and that card has no icons in its boost area?

A: No, because the player knows that the ability will not be able to affect its target, the ability cannot be triggered.

HERCULES HERO PACK

LABOR CARDS

Q: What happens if a **LABOR** card fails to find a target when it is revealed?

A: That **LABOR** card is discarded. Any time a **LABOR** card leaves play other than being placed in the victory display, place it on the bottom of the **LABOR** deck.

APPENDIX V: ERRATA

CORE SET

SUPERHUMAN LAW DIVISION (#26)

Should read: "**Alter-Ego Action:** Exhaust Superhuman Law Division and spend a **🗡** resource → remove 2 threat from a scheme." (Removed "(thwart)" label.)

IRON MAN (#29A)

Should read: "You get +1 hand size for each **TECH** upgrade you control (to a maximum of +6 hand size)." (Changed "(to a maximum hand size of 7)" to "(to a maximum of +6 hand size)".)

THE DOOMSDAY CHAIR (#183)

Should read: "When Revealed: If M.O.D.O.K. is not in play, search the encounter deck and discard pile for M.O.D.O.K. and put him into play engaged with you, then shuffle the encounter deck." (Added periods to "M.O.D.O.K.")

M.O.D.O.K. (#184)

Added periods to card title.

THE WRECKING CREW SCENARIO PACK

"I'VE BEEN WAITING FOR THIS!" (#41)

Should read: "**When Revealed:** The active villain heals 3 hit points. Give that villain a tough status card." (Changed "gains" to "heals".)

CAPTAIN AMERICA HERO PACK

HONORARY AVENGER (#25)

Should read: "Play only if your identity has the **AVENGER** trait. Attach to a friendly character. Max 1 per character. Attached character gets +1 hit point and gains the **AVENGER** trait." (Added "Max 1 per character.")

FOLLOWED (#32)

Should read: "**Interrupt:** When attached scheme is defeated, deal 4 damage to an enemy." (Changed "Response" to "Interrupt".)

THOR HERO PACK

LIGHTNING STRIKE (#6)

Should read: "**Hero Action:** Spend X **⚡** resources → deal X damage to the villain and each minion engaged with you. This damage ignores tough status cards if you have the **AERIAL** trait." (Changed "attack" to "damage".)

LOKI (#28)

Should read: "**Forced Interrupt:** When Loki would be defeated, discard the top card of the encounter deck. If that card is a treachery, heal all damage from Loki instead." (Changed "**Interrupt**" to "**Forced Interrupt**".)

BLACK WIDOW HERO PACK

BLACK WIDOW (#1A)

Should read: "**Widowmaker — Response:** After you resolve the ability of a **PREPARATION** card you control, deal 1 damage to an enemy." (Changed "trigger" to "resolve".)

SYNTH-SUIT (#9)

Should read: "**Hero Response:** After you resolve the ability of a **PREPARATION** card you control, exhaust Synth-Suit → ready Black Widow." (Changed "trigger" to "resolve".)

DOCTOR STRANGE HERO PACK

IRON FIST (#14)

Should read: "**Interrupt:** When Iron Fist attacks an enemy, remove 1 mystic counter from him → stun that enemy and deal 1 damage to it." (Changed "**Response**" to "**Interrupt**".)

WARNING (#21)

Should read: "**Interrupt:** When a hero would take any amount of damage, reduce that amount by 1." (Removed "(defense)" and the **DEFENSE** trait.)

HULK HERO PACK

INNER DEMONS (#25)

Should read: "**Give to the Bruce Banner player.** Change form (flip your identity). • If you are Bruce Banner, discard 2 cards from your hand. Discard this obligation. • If you are Hulk, exhaust your hero. Discard this obligation." (Removed "Then:".)

RISE OF RED SKULL EXPANSION

AVENGERS TOWER (#21)

Should have the **AVENGER** trait.

MARKED FOR DEATH (#28)

Should read: "**When Revealed:** The Clint Barton player searches their hand, deck, discard pile, and play area for Mockingbird and **tucks** her faceup beneath this card. When this scheme is defeated, return the **tucked** Mockingbird to her owner's hand." (Changed "places" to "tucks" and "stage" to "scheme". Added "the tucked".)

HAIL HYDRA! (#57, #147)

Should read: "**When Revealed:** Each **HYDRA** minion engaged with a hero attacks that hero. Each player who was not attacked this way searches the encounter deck and discard pile for a **HYDRA** minion and puts it into play engaged with them. Shuffle the encounter deck if it was searched." (Changed the shuffle ability to only occur if the encounter deck is searched.)

ATTACK ON MOUNT ATHENA (#61A)

Should read: "**Contents:** Crossbones (I) and Crossbones (II). Crossbones, Experimental Weapons, and Standard Encounter sets. Three modular sets (*Hydra Assault*, *Weapon Master*, and *Legions of Hydra*)." (Changed "Hydra Patrol" to "Hydra Assault".)

THE RISE OF RED SKULL (#128A)

Should read: "**Setup:** Put the Red House into play. Shuffle every other encounter side scheme into the side-scheme deck and set it next to the encounter deck (see insert). Set The Sleeper aside, out of play." (Added "encounter" before "side scheme".)

TWISTED REALITY (#135)

Should read: "**Forced Interrupt:** When attached side scheme is defeated, deal the first player an encounter card." (Changed "**Forced Response**" to "**Forced Interrupt**".)

BITTER RIVAL (#136)

Should read: "**When Revealed:** For each side scheme in play, choose and exhaust a character you control." (Revised wording to function as intended with updated "for each" rules.)

WASP HERO PACK

BEETLE (#28)

Should read: "**Forced Interrupt:** When Beetle is defeated, the defeating player chooses to either spend a resource or shuffle Beetle into the encounter deck." (Specified which player should resolve the ability.)

GALAXY'S MOST WANTED EXPANSION

RULEBOOK PG. 10, CAMPAIGN INSTRUCTIONS, SETUP, BULLET 5

Should read: "**Expert Campaign Only:** When setup ends, in player order, each player must choose 1 card from their hand and put it faceup into The Collection." (Added "When setup ends".)

RULEBOOK PG. 18, CAMPAIGN INSTRUCTIONS, SETUP, BULLET 1

Should read: "(Optional) Reveal the Kree Supremacy (#182A) side scheme (use the reverse side for expert mode)." (Added "(Optional)" before the instruction.)

OBEDIENCE POTION (#123)

Should read: "**Hero Action:** Take 1 damage and spend 2 resources → discard this card. Any player can do this." (Changed reminder text to rules text.)

THE POISON (#125)

Should read: "**Hero Action:** Spend 3 resources of different types → discard this card. Any player can do this." (Changed reminder text to rules text.)

STAR-LORD HERO PACK

COSMO (#20)

Should read: "**Interrupt:** When Cosmo attacks or thwarts, name a card type, then discard the top card of a player deck or the encounter deck. If that card is of the named type, Cosmo does not take consequential damage for this use." (Changed "a deck" to "a player deck or the encounter deck". Removed reminder text.)

MAD TITAN'S SHADOW EXPANSION

RULEBOOK PG. 10, TWO MAIN SCHEMES, PARAGRAPH 1

Should end with this sentence: "When a minion schemes, that threat is placed on the main scheme with the attachment 'Focused Defense' attached to it."

SANCTUARY (#116)

Should read: "Thanos cannot take damage from player cards." (Added "from player cards".)

INFINITY GAUNTLET (#129)

Should read: "Permanent. Setup.

Attach to the villain.

Forced Response: After attached villain activates against you, resolve the Special ability of each Infinity Stone in play. Otherwise, put the top card of the Infinity Stone deck into play." (Added "Attach to the villain" and "against you".)

NEBULA HERO PACK

EROS (#11)

Should read: "**Response:** After you play Eros from your hand, for each  resource you used to pay for him, choose a minion and confuse it." (Revised wording to function as intended with updated "for each" rules.)

COSMO (#20)

Should read: "**Interrupt:** When Cosmo attacks or thwarts, name a card type, then discard the top card of a player deck or the encounter deck. If that card is of the named type, Cosmo does not take consequential damage for this use." (Changed "a deck" to "a player deck or the encounter deck". Removed reminder text.)

OLD RIVALS (#31)

Should read: "**When Revealed:** Gamora attacks you. If the Gamora hero or ally is in play, she attacks you (resolve her ATK against you without exhausting her). If no attack was made this way, this card gains surge." (Changed reminder text to rules text to function with the updated rules on referential abilities.)

WAR MACHINE HERO PACK

JAMES RHODES (#1B)

Should read: "**Action:** Choose a War Machine card in your discard pile and shuffle it into your deck. (Limit once per phase.)" (Added "(Limit once per phase.)")

VALKYRIE HERO PACK

ARAGORN (#7)

Should read: "You get +4 hit points and gain the **AERIAL** trait." (Changed "Valkyrie" to "You".)

SHIELDMAIDEN (#11)

Should have the **DEFENSE** trait and read: "**Hero Interrupt (defense):** When the enemy with Death-Glow attached attacks, declare Valkyrie the defender without exhausting her. She gets +2 DEF for this attack." (Added "(defense)".)

BEGUILED (#31)

Should have the **CONDITION** trait and read: "**When Revealed:** Attach to the ally with the highest cost without Beguiled attached. Attached ally engages its controller. Otherwise, this card gains surge."

VISION HERO PACK

MACHINE MAN (#22)

Should read: "**Interrupt:** When Machine Man attacks or thwarts, spend up to 3 resources of any type → Machine Man gets +1 THW and +1 ATK for this use for each resource spent this way." (Added "for this use".)

SINISTER MOTIVES EXPANSION

RULEBOOK PG. 17, THE GLIDER COUNTER, PARAGRAPH 4

Should end with this sentence: "When a main scheme is completed, flip it to its environment side."

RULEBOOK PG. 22, REPUTATION TRACK, LEFT COLUMN, PARAGRAPH 2

Should read: "During the Resolve Mulligans step of game setup, each player may take 1 additional mulligan." (Changed "step 13" to "the Resolve Mulligans step" to align with updated setup process.)

WORRIED FATHER (#25)

Should read: "Search your deck, hand, discard pile, and play area for George Stacy and attach him facedown to this card." (Attaches George Stacy to itself instead of setting him aside and attaching to him.)

VENOM I AND II (#73-74)

Should read: "Vengeance — **Forced Response:** After you or an ally you control attacks and damages Venom, place 1 facedown boost card on your identity." (Changed "you attack and damage Venom with a card you control" to "you or an ally you control attacks and damages Venom".)

VENOM III (#75)

Should read: "Retribution — **Forced Response:** After you or an ally you control attacks and damages Venom, place 1 facedown boost card on your identity (2 facedown boost cards instead if this is the first attack this turn)." (Changed "you attack and damage Venom with a card you control" to "you or an ally you control attacks and damages Venom".)

MANIPULATED MIND (#171)

Should read: "**When Revealed:** Attach to the ally you control with the lowest cost. Attached ally engages its controller. Otherwise, this card gains surge." (Added "Attached ally engages its controller.")

NOVA HERO PACK

MS. MARVEL (#2)

Should read: "**Hero Response:** After you play an event, exhaust Ms. Marvel and deal 1 damage to her → return that event to your hand from your discard pile." (Added "from your discard pile".)

IRONHEART HERO PACK

"GO FOR CHAMPIONS!" (#25)

Should read: "**Hero Action:** Remove 'Go for Champions!' from the game → each Champion character in play cannot take damage until the end of the round." (Added "Remove 'Go for Champions!' from the game →".)

SP//DR HERO PACK

SP//DR SUIT (#1B)

Should read: "Return to Base — **Forced Interrupt:** When you flip to this side, flip SP//dr to Peni Parker. Detach Peni Parker from here, moving all counters on this card and cards attached to this card to her." (Counters and attachments now move to Peni Parker, instead of the reverse.)

M.O.R.B.I.U.S. (#27)

Should read: "**Forced Response:** After the engaged player generates any number of resources, deal an equal amount of damage to that player's hero." (Changed "engaged hero" to "engaged player" and "that hero" to "that player's hero".)

MUTANT GENESIS EXPANSION

STEEL FIST (#8)

Should read: "**Hero Action (attack):** Deal 5 damage to an enemy. You may discard a tough status card from your hero to stun and confuse that enemy." (Replaced cost arrow with "to".)

ARMOR UP (#10)

Should read: "**Alter-Ego Interrupt:** When the villain would activate, change to hero form." (Added "would".)

MUTANTS AT THE MALL (#88A)

Should read: "**When Defeated:** The first player searches the encounter deck and discard pile for a **SENTINEL** minion and reveals it. Flip this card and put Jubilee into play, discarding any other ally version of Jubilee from play." (Added "ally".)

ASTEROID M (#141B)

Should read: "**Forced Response:** After you place a magnet counter on this scheme, if there are at least 3 magnet counters here, remove 3 of them and discard cards from the encounter deck until a **MAGNETIC** card is discarded. Reveal that card." (Magnet counters are now removed before the **MAGNETIC** card is revealed.)

FACTORY ONLINE (#142B)

Should read: "**Forced Response:** After you place a magnet counter on this scheme, if there are at least 3 magnet counters here, remove 3 of them and discard cards from the encounter deck until a **MAGNETIC** card is discarded. Reveal that card." (Magnet counters are now removed before the **MAGNETIC** card is revealed.)

THE RULE OF MAGNUS (#143B)

Should read: "**Forced Response:** After you place a magnet counter on this scheme, if there are at least 3 magnet counters here, remove 3 of them and discard cards from the encounter deck until a **MAGNETIC** card is discarded. Reveal that card." (Magnet counters are now removed before the **MAGNETIC** card is revealed.)

WOLVERINE HERO PACK

LOGAN (#1A)

Should read: "**Setup:** Put Wolverine's Claws into play."

BERSERKER BARRAGE (#8)

Should read: "**Hero Action (attack):** Deal 4 damage to an enemy. If this attack defeats an enemy, you may take 2 damage to repeat this ability." (Replaced cost arrow with "to".)

STORM HERO PACK

CLAUSTROPHOBIA (#30)

Should read: "Flip to alter-ego form. You cannot change to hero form." (Changed "change forms" to "change to hero form".)

POSSESSED (#38)

Should read: "**When Revealed:** Attach to the ally with the lowest THW without Possessed attached. Attached ally engages its controller. If you cannot, this card gains surge." (Added "Attached ally engages its controller".)

GAMBIT HERO PACK

PSIONIC SHIELD (#34)

Should read: "**Forced Interrupt:** When attached minion would leave play, instead heal all damage from that minion. Then, discard this attachment." (Removed "and put it back into play".)

ROGUE HERO PACK

ANNA MARIE (#1A)

Should read: "**Setup:** Find your Touched upgrade and set it aside.

*Withdrawn — **Forced Response:** After you change to this form, find Touched and set it aside." (Now specifies to "find" Touched and set it aside.)*

ROGUE (#1B)

Should read: "**Skin Contact — Action:** Find Touched and attach it to another character. You gain each of the attached character's **TRAITS** until the end of the round. (Limit once per round.)" (*Changed "Attach Touched..." to "Find Touched and attach it..."*.)

ENERGY TRANSFER (#7)

Should read: "**Hero Action:** Find Touched and attach it to a character other than Rogue and deal 2 damage to that character → heal 2 damage from Rogue and ready her. You gain each of the attached character's **TRAITS** until the end of the round." (*Changed "Attach Touched..." to "Find Touched and attach it..."*.)

MYSTIQUE'S MANIPULATIONS (#26)

Should read: "**When Defeated:** The defeating player searches the encounter deck and discard pile for a copy of the Mised treachery and shuffles it into their deck." (*Specified who should resolve the ability.*)

BONEBREAKER (#31)

Should read: "**Forced Response:** After Bonebreaker engages you, take 1 indirect damage for each **REAPER** minion engaged with you." (*Changed "Forced Interrupt" to "Forced Response"*.)

MOJOMANIA SCENARIO PACK

THE SEARCH FOR SPIRAL (#16)

Should read: "**Hero Action:** Take 2 damage → remove 3 threat from here." (*Added cost arrow.*)

FETCH QUEST (#45)

Should read: "**When Defeated:** In player order, each player may search their deck for a card and play that card, ignoring its resource cost. (*Shuffle.*)" (*Replaced "for free" with "ignoring its resource cost"*.)

NEXT EVOLUTION EXPANSION

INHIBITOR COLLAR (#92)

Should read: "**Action:** Choose to either exhaust a character you control or take 3 damage → discard this card. Any player can do this." (*Changed reminder text to rules text.*)

X-23 HERO PACK

FRONT LINE SPECIALIST (#36)

Should read: "Your identity gets +4 hit points." (*Changed "hero" to "identity"*.)

DEADPOOL HERO PACK

'POOL-IZED (#41)

Should read: "**When Revealed:** Attach to the ally with the highest cost without 'Pool-ized attached. Attached ally engages its controller. Otherwise, this card gains surge." (*Added "Attached ally engages its controller."*)

AGE OF APOCALYPSE EXPANSION

SUIT UP (#17)

Should read: "**Alter-Ego Action:** Search your deck and discard pile for an ally and an upgrade that can be attached to an ally. Add them to your hand." (*Changed "can be attached to that ally" to "can be attached to an ally"*.)

MISSION TEAM (#171A)

The first bullet should read: "Reduce the cost of the next ally played to the mission this phase by 2." (*Added "this phase"*.)

NIGHTCRAWLER HERO PACK

ROGUE (#12)

Should read: "**Action:** Deal 1 damage to another friendly character → until the end of the round, Rogue gains each of that character's **TRAITS** and adds that character's base THW and ATK to her matching powers. (Limit once per round.)" (*Changed "printed" to "base"*.)

TWEEDLEDOPE (#37)

Removed the star icon (★) from this card's boost field.

MAGNETO HERO PACK

MAGNETIC MISSILE (#10)

Should read: "**Hero Action:** Discard a minion with Wrapped in Metal attached. Then, deal 5 damage to an enemy and stun it." (*Changed cost arrow to "Then"*.)

DEFT FOCUS (#23)

Classification should be "Basic" instead of "Protection."

EXODUS (#28)

Should read: "**Forced Response:** After Exodus attacks you, discard cards from the top of your deck equal to his total ATK for that attack." (*Added "for that attack"*.)

AGENTS OF S.H.I.E.L.D. EXPANSION

RADIATION EXPOSURE (#171A)

The "SCH" modifier on this card should be a "THW" modifier.

MACH-IV (#156)

Should read: "Each character without the Aerial trait cannot defend against MACH-IV's attacks." (*Changed "make basic defenses" to "defend"*.)

SILK HERO PACK

EIDETIC MEMORY (#8)

Should read: "**Interrupt:** When you reveal a card from the same encounter set as a card tucked under your identity, exhaust Eidetic Memory → swap those cards. Reveal the card that had been tucked under your identity instead."
(Changed "Silk" to "your identity".)

WINTER SOLDIER HERO PACK

S.H.I.E.L.D. DEPUTY (#33)

Should read: "Attach to a friendly character. Max 1 per character." (Added "Max 1 per character.")

TRICKSTER TAKEOVER SCENARIO PACK

RULEBOOK PG. 19, SWAPPING AVATARS OF LOKI, PARAGRAPH 1

Should read: "When a card effect instructs the players to swap an **AVATAR OF LOKI** villain or Fading Figment with a random set-aside **AVATAR OF LOKI** villain, they should replace the villain in play with one of the other set-aside versions of the **AVATAR OF LOKI** villain." (Rewritten to apply section's rules to swapping a Fading Figment with an **AVATAR OF LOKI** villain.)

CIVIL WAR EXPANSION

YELLOW JACKET (#19)

Title should read "Yellowjacket".

Text should read: "**Response:** After Yellowjacket enters play, search the top 5 cards of your deck for an upgrade and add it to your hand." (Changed "Yellow Jacket" to "Yellowjacket".)

YELLOW JACKET (#73)

Title should read "Yellowjacket".

ENERGY CHANNEL (#98)

Should read: "**Forced Response:** After a leader, hero, or ally attacks Captain Marvel, place 1 energy counter here. Then, if there are at least 4 energy counters here, remove all of them and Captain Marvel attacks that character. This attack gains overkill." (Changed "→" to "and".)

SYNTHETOID SMACKDOWN SCENARIO PACK

MOON KNIGHT (#65)

Should read: "**When Revealed:** Resolve the "**When Revealed**" ability of the topmost treachery in the encounter discard pile. (Limit once per phase.)" (Added "(Limit once per phase.)")

PHASED OUT (#76)

Should read: "**Action:** Choose an attachment on the enemy leader with the text '**Hero Action**' or '**Hero Response**' and discard it." (Changed "**Hero Interrupt**" to "**Hero Action**".)

WONDER MAN HERO PACK

IONIC PHYSIOLOGY (#2)

Should read: "**Response:** After you play an event with a printed ⚡ resource, tuck that event from your discard pile under this card. Then, heal 1 damage from your identity."
(Changed cost arrow to "Then".)

APPENDIX VI: GAME ENVIRONMENTS (BETA)

When preparing for a game, a group of players may choose a game environment for that game, or they may decide to allow each player to choose their own environment for that game. The game environment establishes which *Marvel Champions* products can be used during player deck customization for that game. By choosing to use a smaller environment, players can test their creativity and skill by customizing their player decks using a smaller pool of player cards.

To play in a game environment, a player customizes their deck using only player cards included in the products designated by that environment. This includes the choice of which hero to play as.

A group may choose to play any scenario with any modular encounter sets, regardless of the chosen environment(s).

There are three types of environments:

CURRENT ENVIRONMENT

The Current Environment consists of the most recent products released for *Marvel Champions*, in addition to the core set.

The Current Environment includes the following products:

- The *Marvel Champions: The Card Game* core set
- **Expansions**
 - The *Age of Apocalypse* campaign expansion 🗡️
 - The *Agents of S.H.I.E.L.D.* campaign expansion 🕸️
 - The *Civil War* custom scenario expansion 🕸️
 - *The Fear No Evil* campaign expansion 🦋 (upon release)
- **Hero Packs**
 - *Iceman Hero Pack* ❄️
 - *Jubilee Hero Pack* ✨
 - *Nightcrawler Hero Pack* 🦇
 - *Magneto Hero Pack* 🧲
 - *Black Panther Hero Pack* 🦁
 - *Silk Hero Pack* 🕸️
 - *Falcon Hero Pack* 🦅
 - *Winter Soldier Hero Pack* ★
 - *Wonder Man Hero Pack* 🦋
 - *Hercules Hero Pack* 🦁
- All products **not listed above that were** released since the most recent version of this document was published (v1.8, Jul 2026).

LEGACY ENVIRONMENT

The Legacy Environment consists of **all** *Marvel Champions* products. To play in the Legacy Environment, a player customizes their deck using player cards from any product in their collection.

LIMITED ENVIRONMENT

A limited environment allows a player who owns a number of older products to continue to play with those products while still reaping the benefits of playing within a smaller environment. To play in a Limited Environment, a player customizes their deck using cards from:

- The *Marvel Champions: The Card Game* core set
- Up to 3 campaign and/or custom scenario expansions
- Up to 4 hero packs

While any expansion or hero pack may be chosen for a Limited Environment (and finding creative combinations of products from which to build could be an enjoyable experience for deckbuilding enthusiasts), a number of past *Marvel Champions* products were developed together in waves. As a starting point for creating a Limited Environment, we recommend selecting three waves of related products to explore the synergies between those cards, and branching out to other, more creative combinations only after growing more familiar with the cardpool.

The waves released as of the publication of this document are:

1. The *Captain America* hero pack, the *Ms. Marvel Hero Pack*, the *Thor Hero Pack*, the *Black Widow Hero Pack*, the *Doctor Strange Hero Pack*, and the *Hulk Hero Pack*.
2. The *Rise of Red Skull* campaign expansion, the *Ant-Man Hero Pack*, the *Wasp Hero Pack*, the *Quicksilver Hero Pack*, and the *Scarlet Witch Hero Pack*.
3. The *Galaxy's Most Wanted* campaign expansion, the *Star-Lord Hero Pack*, the *Gamora Hero Pack*, the *Drax Hero Pack*, and the *Venom Hero Pack*.
4. The *Mad Titan's Shadow* campaign expansion, the *Nebula Hero Pack*, the *War Machine Hero Pack*, the *Valkyrie Hero Pack*, and the *Vision Hero Pack*.
5. The *Sinister Motives* campaign expansion, the *Nova Hero Pack*, the *Ironheart Hero Pack*, the *Spider-Ham Hero Pack*, and the *SP//dr Hero Pack*.
6. The *Mutant Genesis* campaign expansion, the *Cyclops Hero Pack*, the *Phoenix Hero Pack*, the *Wolverine Hero Pack*, the *Storm Hero Pack*, the *Gambit Hero Pack*, and the *Rogue Hero Pack*.
7. The *NeXt Evolution* campaign expansion, the *Psylocke Hero Pack*, the *Angel Hero Pack*, the *X-23 Hero Pack*, and the *Deadpool Hero Pack*.
8. The *Age of Apocalypse* campaign expansion, the *Iceman Hero Pack*, the *Jubilee Hero Pack*, the *Nightcrawler Hero Pack*, and the *Magneto Hero Pack*.
9. The *Agents of S.H.I.E.L.D.* campaign expansion, the *Black Panther Hero Pack*, the *Silk Hero Pack*, the *Falcon Hero Pack*, and the *Winter Soldier Hero Pack*.
10. The *Civil War* custom scenario expansion, the *Wonder Man Hero Pack*, and the *Hercules Hero Pack*.
